LA FORÊT DE SELONGE

"In Selonge Forest, our recon units discovered important enemy depots, probably concealed for an upcoming offensive. We already took control of some of them, but there are more. Our mission is to secure and continue our search for other depots, with the purpose of cutting the enemy's precious supply lines. If you can't capture the depots, destroy them!!!"

1 - Battlefield Setup and Deployment

2 - Composition of The Armies

This scenario is designed to be played with the **Free Battle Mode** and tournament rules (250 points and a maximum of 4 orders, per army). Please download the tournament rules on the Devil Pig Games website for more details about this game format.

3 - Preparation

Each player rolls the dice. The player with the highest result chooses either:

- His deployment zone
- Or the initiative on the first turn.

The player with the lowest result chooses the other option.

Place 5 depots (2 Allied, 2 German, 1 neutral) on the squares marked on the map above. The Allied and German depots replace the neutral depots on the map, each player places their two depots on the two squares closest to their deployment zone. Depot markers are placed on their concealed side.

Place the first player's initiative marker on square one of the turn chart. Each player deploys his units in his deployment zone, beginning with the player with the initiative.

Each player draws 4 Action Cards.

4 - Scenario Rules

This scenario lasts 6 turns.

Depots can be spotted by using the **Ambush** special ability rules.

A player is never obligated to reveal one of his own Depots but can choose to do so, even if such a Depot can be spotted by one of his own units. A player cannot reveal a Depot if he has no units to spot it.

The neutral Depot in the middle of the map is revealed as soon as a unit fulfills the regular spotting conditions.

The **Munitions Carrier** special ability of each Depot is usable by both sides.

A unit cannot move into a square with a Depot marker.

The goal of each player is to **control as many Depots as possible or to destroy the neutral Depot and the opposing Depots.**

In order to control a Depot, you need to be the only player with at least one unit in the eight squares surrounding a Depot.

At the end of Turn 6 (or when the time limit of 60 minutes has expired), each player calculates his victory points according to the following rules:

- **Controlling** one of your **own** depots: 1 point.
- **Controlling** an opponent's depot or the neutral depot: 2 points.
- **Destroying** an opponent's depot or the neutral depot: 1 point.

5 - Victory Conditions

The player with the most victory points wins the game. In the case of a tie, the standard victory point system of Heroes of Normandie is used as a tiebreaker (Compendium p.34).

However, for balancing reasons and compensating the scoring difference in army compositions, we apply the following formula:

$$\text{Final score} = \frac{\text{victory points}}{\text{victory point value of the opposing army composition}} \times 25$$

For example:

Player A has an army composition with a victory point value of 18 points.

Player B has an army composition with a victory point value of 16 points. After the battle, player A scored 12 points. His final score is therefore: (12/16) x 25 = 18,75 points.

(12/16) x 25 = 18,75 points

If there's still a tie, the match is a draw.
