CATCH AT POINTE DU HOC

THERE'S TWO TYPES OF MEN ON EARTH. THOSE WITH A GUN AND THOSE THAT CLIMB. YOU!...YOU CLIMB...

Pointe du Hoc, 0600 hrs. June 6, 1944.

Just imagine the scene. It's wet, cold and windy. Surrounded on all sides by my brothers in arms, I'm upstanding on the deck of the transport vessel S.S. Ben My Chree. Actually we're all trying to stay on our feet as the rough sea rocks us in every direction.

On the bridge, Lt. Col. Rudder, Texas Aggie and former football coach overlooks us, suddenly drawing our attention, as he hollers : "Now hear me!... Rangers! Show them what you're made of... Good luck, men! Demolish them!... We leave in five minutes! Five minutes!!!"

In the far distance, countless dark smoke plumes rise up from one hellish looking cliff. That... is where we shall attack. We have all we need to do so : grappling hooks, ladders, rifles... and guts... a whole lot of guts...

We heave ourselves overboard onto the rope ladders and climb down into our LCA. Men puke, men swear, ...men pray... The gusty wind blows us to the East of our objective. We are running late... This is starting to take too long. If the brass thinks this mission has gone awry, any of the reinforcements meant for us will be diverted to Omaha Beach instead.

We're taking fire from the coast. A supply craft with munition explodes, a DUKW is sunk, everybody drowns...

It is past 0700 hrs. when we finally set foot on the beach at the base of the cliff. The beach is pockmarked from mortar and MG 42 hits. From above, Krauts lob grenades at us. I swiftly set up the projector and launch a grapnel. It goes up a ways, but weighed down by the soaking wet attached rope, falls short, bounces off the steep rocky cliff and plunges back down. Rangers are putting up the long ladders we got from British fire brigades. Germans unhook grapnels that did attach to the cliff, ropes are cut... But our men are going up, on the ladders, ropes, some even climbing with only the help of their bayonet. Silhouettes are moving to attack up above.

My turn to go. A boy from Oklahoma gets hit in the shoulder, loses grip and plummets to his death... A gory death on the rocks. I look away and up at the top. Climb on... A German keels over and joins the Oklahoma kid down below. I grab a sod of grass and hoist myself over the edge of the cliff. The handful of Fritzes still left to defend the position are quickly dealt with. We urge ourselves to blow the artillery skyhigh but instead find only wooden logs. The guns are gone... We've been had!

Rudder joins us and organises defences. At about 0800 hrs. he finally gets a message through to HQ requesting urgent reinforcements and ammunition. They tell us we did a good job, then apologise for the lack of supplies and reinforcements, the other Rangers were sent to Omaha.

Now isn't that nice...

The navy fires a barrage around our positions to keep the Germans at bay. To the South our boys are demolishing some smaller artillery with explosives, whilst getting rid of some Hermanns.

Throughout the day there are scraps and skirmishes. We're dogtired. Night falls and the Heinies infiltrate our lines. We push them back but some of us are captured. Munitions run out faster than our pay on Saturday.

The second day is pretty much the same. We're taking sniper fire. We hide in shell holes and take cover. We lost twenty fellows trying to silence an '88. Rudder stops that attack.

We dig in. The second night commences. I'm down to two clips, one of them retrieved from Johnson... He doesn't need it anymore... We repel three more counterattacks. We end up fighting with our bayonets, fists, teeth... But we are losing ground. We may have no choice but to throw ourselves off this doggone rock.

Things ease up. We wait and hold out until the 116th arrives...

FIRE

The wind
At the start of the game, align the wind rose with the game board.

Roll two dice to determine wind direction. Then turn the wind rose over. The red arrow is printed on this side. Place the wind rose next to the map with the arrow pointing in the wind direction determined by the die roll.

On a roll of **10**, **11**, or **12** there is no wind.

At the **start of each turn**, roll **1** die.
On a result of :
- **1**, pivot the rose **45° to the left**.
- **2**, **3**, **4** or **5** the wind direction doesn't change.
- **6**, pivot the rose **45° to the right.**

Fires
At the start of each supply phase, remove all the fire markers that aren't on a terrain element.

Fire marker

The back side of the Flame thrower is a Fire marker.

There can be only **1** Fire marker per space. If at least **1** Fire marker is located on a terrain element, outside of buildings, roll **1** die.
If there is no wind, ignore any results over **2**, the flames do not spread.

On a result of :
- **1**, the player with initiative chooses and removes 2 Fire markers.
- **2**, the player with initiative chooses and removes **1** Fire marker.
- **3** or **4**, nothing happens.
- **5**, the player with initiative chooses a location with a Fire marker on the board and places **1** Fire marker on the space next to it in direction of the wind.
- **6**, the player with initiative chooses a location with a Fire marker on the board and places **2** Fire markers, one after the other, on the space next to it in direction of the wind.

Example :
The die roll is 6.

A The player with initiative places a first Fire marker, then a second one next to the first one.

B The player with initiative places two Fire markers separately, one each next to a different marker already on the board.

For buildings on fire, roll **1** die for each building that has at least **1** Fire marker on it. Whenever more than **1** Fire marker is inside, add **+1** to the die roll for every Fire marker on the building (**beyond the first one**).

On a result of:
- **1**, remove **1** Fire marker.
- **2** or **3**, nothing happens.
- **4** or **5**, place **1** Fire marker on the building.
- **6**, place **1** Fire marker and 1 Destruction marker on the building.

Fires and large buildings
In large buildings fire spreads like it does outside.
The player with initiative chooses a Fire marker already on a space of the building and places the new fire counter anywhere adjacent on a free space. Wind direction is ignored inside.
Large buildings don't take Fire marker from the outside.

Damage
Units finding themselves on a clear terrain space, terrain element or in a building with a Fire marker, suffer an attack. When they are inside a building with several Fire markers, they suffer **1** attack for each counter there. The bombat bonus is marked on the Fire tile.
The units don't benefit from any defense bonuses from the terrain elements or buildings normally provide.

Rain

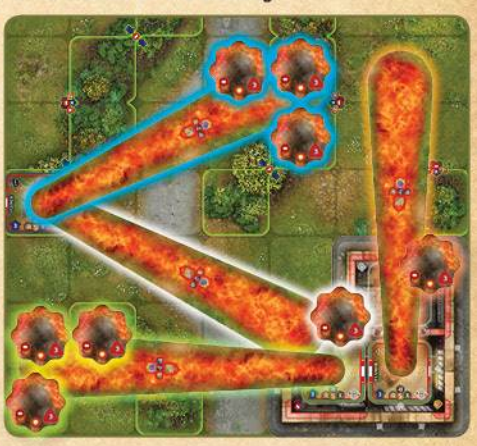

In case of rain, at the beginning of each supply phase, remove any Fire markers that are not on a building. No more dice are rolled for them.
For markers present on buildings, ignore all die rolls higher than 3.

Flamethrower

When using a flamethrower, aim the appropriate template in the right direction. Place a fire counter on the space or spaces covered by the extremity, widest end, of the flamethrower template. Maximum 3 counters may be placed.

If Flamethrowers are fired at a building from the outside to the outside of the building OR if they are fired from the inside to the inside, put 1 Fire marker on the building.

THE LIGHTHOUSE

The lighthouse has four floors.
The ground floor is printed on the terrain element that denotes the lighthouse. This is placed on the game board when the lighthouse is in play.

The other three floors each have their own tile and are kept on the lighthouse board.

Stairs
A space containing this symbol permits to move up to the upper stair (if possible) and to move down to the lower floor (if possible).

The Stairs space and the arrival space on the next floor are adjacent. Stairs space does not hinder movement.

A unit on a Stairs space can assault a unit OR shoot / throw grenades at a target on the next floor either up or down.
The target unit benefits from the defense bonus, if any, of the floor it is located on.

Dominant Position
A space containing this symbol permits to move down to the lower floor (if possible).

A unit located in a Dominant position can shoot at units elsewhere on the board, taking into account the rules for shooting described in the Core box rulebook.

A unit in a Dominant position is less bothered by objects in the Line of Sight (**LoS**).
If the **LoS** from the Dominant position passes through a terrain element (with these symbols)

or through a vehicle, **LoS** effects caused by this obstacle are only applied to the space directly behind this obstacle. Spaces further away from the obstacle are not affected by its **LoS** effects.
Infantry units never block **LoS** from a Dominant position.
When a unit can be targeted by an enemy in a Dominant position, this unit can also shoot at the enemy in the Dominant position or target the position itself.
Units present in a Dominant position ignore rules for levels (*See p.4*), except if another Dominant position blocks their **LoS**.

Floors and Line of Sight
The walls of the first and second floors are marked on the ground floor in transparent form (inner red circle).
So, regardless of which of these floors a unit is on, draw a line from the red dot in the middle of the ground floor to a target outside or vice versa, when checking **LoS**. The range is determined from the space with the red dot.
The top floor of the lighthouse provides **LoS** in all directions.

Destruction: ruined vs obliterated
Every floor can be targeted for destruction.
Once a floor has received sufficient Destruction markers, flip it over to its ruined side.
This ruined section still supports all floors that might be above it.
Any units present on the floor, when it became ruined, get a Suppressed marker.
This floor remains accessible and still provides passage to other floors.

The ruined side of a floor can also take an amount of damage, this is equal to the number in the tower symbol.
Once this amount of damage is dealt to the ruined section it is totally obliterated. All upper floors collapse and are immediately considered obliterated as well.
Any units present on an obliterated floor are eliminated.
Remove all obliterated sections from the game.

Joseph Legalec

What would a lighthouse be without a keeper who's so firmly embedded in folklore?
Taciturn Joseph is just the right bloke to add some "atmosphere" to your parties. This grandpappy, never seen without a pipe dangling from the corner of his mouth, has seen some STRANGE things in his life. He could fill the long winternights, entertaining a whole infantry division, with tales of seamonsters, shipwrecks and smugglers as he probably constitutes a living encyclopedia of lurid phenomena.
But he remains silent... Who knows.. maybe he's a myth agent... or a seasoned investigator?...

LEVEL AND DEPRESSION

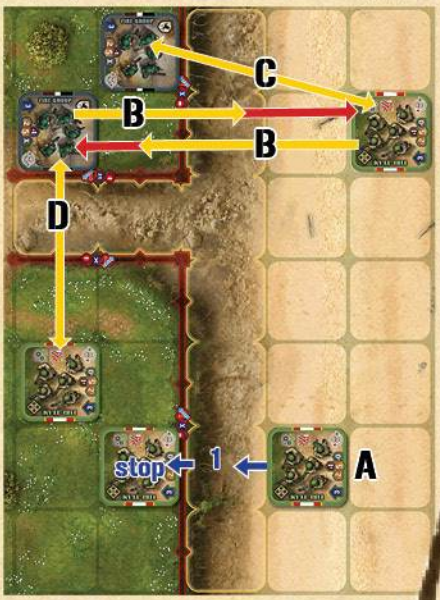

Levels
The terrain tiles represent the beach and the German defensive line.
There are two types of terrain : the elevations which are depicted by grass and the depressions which are the sand spaces on the map.

These different terrain levels are separated by a red line. Light vehicles can't cross this line and infantry moving over it must end their movement on the space right behind it (**A**) before proceeding next turn.

The red line also effects **LoS**.

When units on different levels fire across the red line, they can only shoot at the space right behind the red line (**B**) or target units beyond this space if they are adjacent to the line (**C**).

The red line has no effect if the shooter and the target are both on the same level (**D**).

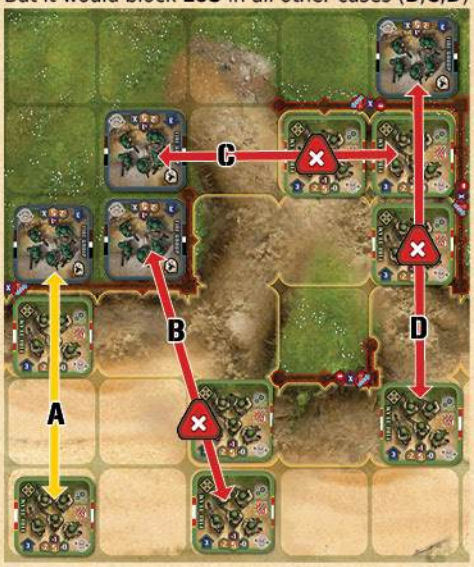

Terrain elements that are in the **LoS** exert their normal effects (**E**).

If both shooter and target are infantry then any infantry unit that stands in between these two will block **LoS** (**F**).

Depressions
A unit standing on a sand space, adjacent to the red line, is on a Depression space and does not block **LoS** of a unit that fires across the red line from the heights onto the beach (**A**).
But it would block **LoS** in all other cases (**B**,**C**,**D**)

Units with the Ambush special ability can hide in Depression space as long as no enemy has **LoS** to them.

SPECIAL ABILITIES

Driver
Vehicles with this special ability don't come equiped with a driver, unlike most other vehicles in the game.
Before this vehicle is allowed to be moved, one or several units must be in or on this vehicle. Their transport value must **equal or exceed** the number shown in this driver symbol.
Reminder (Transport special ability): Units on a side with the symbol and Characters count as 1. All other units count as 2.

Stacking
Within the same space, any amount of civilian units may be stacked with each other or with one either friendly or hostile infantry unit.
When an infantry unit is stacked with civilians, this unit suffers a **-1**, on all attack/defence rolls, **for every civilian counter** present with the infantry in the same space.

Firing: All shots, with or without blast pattern, hit **every** counter present in the space.
Roll a die for each unit.

Assault: In case of assault on an infantry unit stacked with civilians, the latter are **not involved** in the fight and are unscathed. When assaulting a stack entirely composed of civilians, combat is resolved **against one counter** chosen as target. This unit may be eliminated or forced to retreat. The other civilians in the stack are **not involved** in this fight and remain unscathed.
If the attacker wins, the **unscathed** civilians remain in place. They do not retreat along with the defeated unit and now become stacked again when the attacker moves onto the space left vacant by the defeated unit.

Cragsman
This unit may enter spaces with the symbol :

and treats these spaces as Difficult terrain.
Therefore its ends movement each time it climbs onto one of these spaces.

Lightsources and flames
Lightsources and flames illuminate all adjacent spaces.
For firing at units that are illuminated, use the core box rules for shooting.
Units in ambush are treated as if they were in broad daylight. Apply the core box rules for spotting ambushed units.

RECRUITMENT OPTIONS

Artillery
This option grants you **3** Artillery tokens.
To use an Artillery marker, place 1 order token on the tile.
After revealing this order, put a blast pattern on any space intersection.
This option can not be chosen when the scenario dictates removal of all artillery cards in the deck.
Dispersion is 3 intersections.

Incendiary Grenades
This option grants you **3** Incendiary grenade tokens.
The procedure for throwing these incendiaries is the same as for other grenades.
When these explode, place one Fire marker in every space adjacent to the targeted space intersection, except on water spaces.

If the grenade is thrown inside an house, even if more than one space inside a building would be affected, put **1** Fire marker on the building.

Incendiary Shells
This option grants you **3** Incendiary shell tokens.
These can be fired by using the Howitzer special ability OR the Indirect fire special ability OR replacing the primary weapon of a vehicle (red outline around weapon informations).

When these explode, place one Fire marker in every space adjacent to the targeted space intersection, except on water spaces.

If the template is put on an house, even if more than one space, put **1** Fire marker on the building.

Molotov Cocktail
This customization grants a character **1** Molotov cocktail token.
The procedure for throwing this is the same as for grenades.
When it explodes, place one fire counter in every space adjacent to the targeted space intersection, except on water spaces.

Even if more than one space inside a building would be affected, choose a space and place only one fire counter inside.

If it is thrown inside an house, even if more than one space inside a building would be affected, put **1** Fire marker on the building.

Mortar Grapnel
This option grants you **3** Mortar grapnel counters.
During a fire action, a unit on the board, with the Indirect fire special ability can place the lower part of a Grapnel counter within **3** spaces, aligning the counter in the desired direction.
The unit firing the grapnel doesn't need **LoS** to the target space.

Once the grapnel is placed, infantry units may enter the cliff's rockyterrain spaces.

Movement for the turn ends after moving onto a rocky terrain space.
The Fire on the move special ability can not be used during the climb.
Vehicles can not use a grapnel to move onto the cliff.

Offensive Grenades
This option grants you **3** offensive grenade tokens.
The procedure for throwing these is the same as for other grenades.
Roll for each unit, if they survive they get a Suppressed marker.

Oar
If the character equiped with the oar :
- uses it as a weapon, this oar grants an Assault +1 bonus.
- uses it as an oar in an amphibious vehicle or boat, that is afloat and has the Driver special ability, this oar grants a +1 movement speed in this vehicle.

THE MUTANT SHRIMP

What do we know about this monster that haunts the Normandie coast?
The whole affair is very fishy... it's like someone doesn't want people to find out about this...
We know nothing... or close to nothing... other than that it's been seen a couple of times throughout the years.
Although it's shrouded in mystery, a bit.. or rather a whiff of rumour of one such sighting has spread...

An American submarine had surfaced close to the Normandie coast.
A handful of crewmen were on deck ready to launch the rubber dinghy in which some commandos would row to shore for a mission.
The sea air seemed different somehow... heavy... smelly even. Worsening fast... it turned into a repugnant stench that wafted over the submarine deck. It hit the men like a punch in the face. At once they fell victim to uncontrollable recurrent retching and all felt very nauseous. All, except the shortest sailor on deck. Still holding the line attached to the dinghy whilst clenching an oar, he looked around quite befuddled at the sick.
Then, near the torpedo tubes, ... something... huge, tried to clamber on deck. One commando, in a reflex fired his Tommy gun. In the lightflashes bursting from the muzzle, the men caught glimpses of what seemed to be a giant...shrimp!!! It disappeared with a splash. For seconds the men stared in disbelief at the bow. Closer to the tower of the sub, the beast instantly resurfaced and grabbed the seaman next to "shorty". In a fit of panic and rage the wee seafarer wielded the oar, whacking the living daylights out of the beast. It released the shipmate and sank back into the sea. Fearing its comeback, everybody on deck scampered to get inside the sub. The mission was aborted.
The sailors were thoroughly questioned as to what actually happened. It had been a breathtaking affair. The man that almost got pulled underwater, I think Koszo was his name... or something... had suffered a fit of amnesia caused by the stink. For days he had no clue as to who or where he was. His uniform reeked so foul it had to be thrown away... they dumped it in the sea along with the gloves they used to take it off.
Poor guy... gets sick... just thinking of crustaceans now. That's one sailor who won't attend the annual lobster banquet... ever again...
The creature was described as something alive that had an odor as if it had died a long
time ago.
When investigators inquired about the nausea, all sailors and commandos agreed that, compared to it, seasickness felt like fun.
And how come the little sailor wasn't bothered by it?
Turns out he had been a sewerman in New York prior to the war. He was used to a smell or two...
