MINES

MINEFIELD

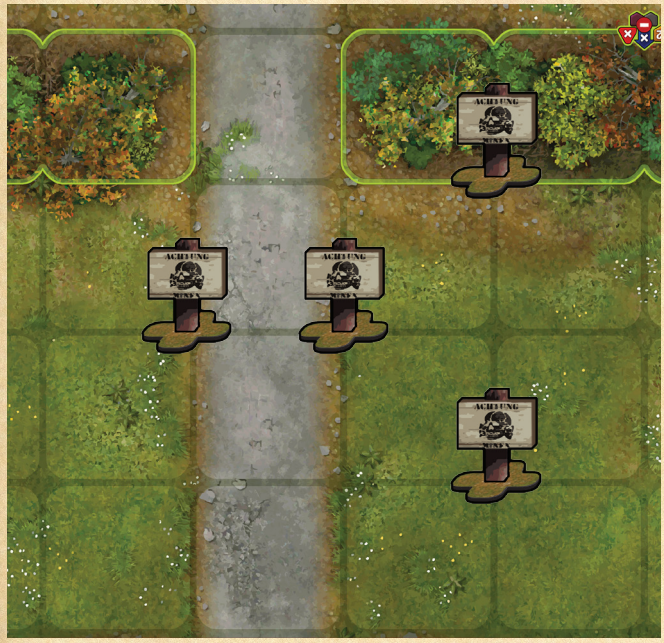

This option gives you the choice of:

- **1** large minefield of **6** Mine tokens + **2** Mine tokens (Decoy),
OR
- **2** smaller minefields of **3** Mine tokens + **1** Mines token (Decoy) each.

You can deploy a mine token up to 3 interspaces ahead of your deployment zone. Deploy them facedown with the values hidden.

Mine tokens are deployed on interspaces (inside houses included).
Each Mine token must be adjacent to at least 1 other Mine token belonging to the same minefield.

Three different Mine token types exist. You can choose the tokens you want for your minefield from those available:

Anti-personnel mines : +1 +1 X

Antitank mines : X +3 +2

Mines (Decoy) : without combat bonus

IN THE MIDDLE OF THE MINEFIELD

When a unit moves in a minefield and after the unit finishes its movement, the minefield owner can reveal Mine tokens in relation to the number of minefield spaces covered by the unit.

For each covered space, **1** Mine token adjacent to this space is revealed or chosen, if already revealed. If more than one unrevealed Mine token are present, no more than **1** is revealed.

The Mine token chosen for each space of movement is the token possessing the best combat bonus against the moving unit of all Mine tokens adjacent to the covered space.

In the situation where no Mine token has a combat bonus against the moving unit type ("X" or no combat bonus), it is possible to reveal a Mine token (Decoy) from the Mine tokens adjacent to the covered space.

It is not possible to reveal a Mine token possessing a "X" combat bonus against the moving unit type.
It is possible that no Mine token is revealed.

The revealed Mine tokens are left on the terrain tiles.

In order to resolve movement through a minefield, the unit owner rolls **1** die.
To that result, he adds the combat bonus, indicating on each Mine token taken into account (1 per space), corresponding to the moving unit type (Side defense value for heavy vehicles).

When the result is equal or greater than to the defense value of the unit in question, the latter takes 1 hit and 1 Suppressed token, as shown below.

The defense bonus provided by terrain and terrain overlays is not added to the unit defense value.

In this example, the Fire Team unit crosses 2 mined spaces and ends his movement in a third.
The first 2 spaces are adjacent to 2 Mine tokens, but one of them is an Antitank mine and is not counted or revealed.
On the third space, a Mine token has already been revealed during a previous movement.
Once his movement is finished, the American player rolls 1 die and adds combat bonus of Mine tokens taken into account.
The unit takes 1 hit and 1 Suppressed marker.

On a result of 1, the unit takes no hit at all and you must discard 1 Mine token. This Mine token must be one of those taken into account for the dice roll. The player who placed the minefield chooses which one to discard (it can be a Decoy).

A unit with the Engineer special ability can try to sweep an area. Instead of a Move action or a Fire action, with an Order token or during the Supply phase, the unit adjacent to Mine tokens can roll a die. On a result of 1, the unit suffers a hit. On any other result, discard all the adjacent Mine tokens.
The Engineer special ability does not protect units against mines.
