DEFENCE SPECIAL ABILITIES

Ace Driver (p.46)
If the vehicle piloted by an ace driver has the Fire on the Move special ability, reduce the penalty by **1**.

Bodyguard (p.46)
This unit can take all the hits in place of a character within **2** squares provided it has a *LoS* (obscured or clear) to the character.

Defender (p.46)
This unit grants **+1** to the *defence value* of allied infantry units in its *ZoC*.

Mechanic (p.46)
A Mechanic can repair *damage* on a heavy vehicle. In order to remove a *damage marker*, the Mechanic must be adjacent to the heavy vehicle.
In either the Activation or Supply Phase, the Mechanic can remove any one *damage marker* instead of taking a *firing action* or a *movement action*.

Positive Waves (p.46)
When your heavy vehicle is *Hit*, your opponent rolls **2** dice for locating *damage* and you choose which of the two results to use.

Substitute (p.46)
This unit can take all the *damage* in place of a *heavy weapon* unit (outlined in red) within **2** squares provided it has a *LoS* (obscured or clear) to it. This special ability does not work if the *heavy weapon* was *Destroyed* during an assault.

Zigzag (p.46) (formerly Unstoppable)
During its *movement action*, this unit cannot be targeted by Opportunistic Fire (whether from a card, a defensive position, a special ability, etc.)

COMMAND SPECIAL ABILITIES

Autonomous (p.47)
This unit does not need an Order token to act. You may decide to activate it at any time during the Activation Phase (even before Special Orders).

Barrage Order (p.47)
You may not use this special ability on the first turn. To give a barrage order, give an Order token to the unit that has this special ability. It can take no other action (neither a *movement action*, nor a *firing action*) when it is directing a barrage order.
Designate up to **3** *heavy weapon* units (outlined in red) that have the exact same name and within **3** squares of the unit that has this special ability. It must have a clear or reduced *LoS* to each of them. The *heavy weapon* units may take a *firing action* during the activation of the unit directing the barrage order.
Resolve each *firing action* separately.

Charm (p.47)
The unit that has this special ability can, at the end of the Order Phase, remove an Order token from a unit within **4** squares.
It must have a clear *LoS* to the target. The downside is that the unit using the ability gets a *Suppressed marker*.

Dog Trainer & Canine Unit (p.47)
The Dog Trainer special ability enables this unit to give an Order token to one of your units that has the Canine Unit special ability.
The dog trainer unit must have a clear or obscured *LoS* to the canine unit.
A canine unit cannot receive an Order token without the intervention of a Dog Trainer unit. Without an Order token, it moves during the Supply Phase towards your closest dog trainer unit.

Heroic Charge (p.47)
When you give an Order token to a unit that has this special ability, activate up to three other infantry units (with the Assault special ability) within **3** squares that haven't been activated yet. The selected units (the one that has the special ability plus the three others) take a *movement action* that must end in a square occupied by an enemy and must therefore launch an assault.

Fragile (p.47)
The unit's morale is very low. It immediately *Destroyed* if it loses an assault or if it has a *Suppressed marker* when it is engaged in an assault.

Initiative (p.47)
When two activated units have the same Order number, the unit that has *initiative* acts first. If both have it, the player that has the *initiative* keeps it.

Inspiration (p.47)
When the unit is activated during the Order or the Supply Phase, in addition to its action, it may remove one *Suppressed marker* from every infantry unit within a number of squares, which is printed on the ability's symbol.It must have a clear or obscured *LoS* to the each unit it is helping.

Motivation (p.47)
All units in the *ZoC* of a unit that has the Motivation special ability receive the *initiative* special ability.

NCO (p.47)
This unit has an NCO among its members or is itself an NCO. As long as you have an NCO on the board, you always have at least one Order token. When activated in the Order Phase, this unit may immediately remove **1** *Suppressed marker* from another unit within **3** squares. It must have a clear *LoS* to the unit it is helping. It can then act normally.

Order(s) (p.47)
This special ability provides one or more additional Order tokens. The number of tokens depends on how many stars are in the ability's symbol.

Personal Order (p.47)
The unit provides one additional Order token. However, you must give this unit an Order token (numbered, Special, or Bluff) every turn.

Scout (p.48) MAJOR CHANGE
After deploying your army in your deployment area or off the battlefield, units that have this special ability may take a *movement action* equal to the number printed in the symbol. This *movement action* disregards Difficult Passages.

Tank Barrage Order (p.48)
This special ability works just as Barrage Order, but only applies to heavy vehicles of any name. The chosen heavy vehicles may only fire one of their weapons.

OTHER SPECIAL ABILITIES

AAA (p.48) (Anti-aircraft Artillery)
When your opponent plays an Air Strike card, you may choose to add **1** to the AAA roll, in which case your unit receives an *Activated marker* and loses any Order token it may have.

Chorale (p.48)
Each unit with this special ability within **2** squares of a unit that begins a Prayer provides a bonus as indicated in the prayer's description.

Driver (p.48)
A vehicle that has this special ability can not move if the carrying capacity printed in the symbol isn't used by an equal number of embarked units.

Engineer (p.48)
Units that have this special ability may use and activate gear or *terrain elements* that have the same symbol.

Fleeting (p.48)
Discard the token or marker at the end of the Supply Phase.

Jury-Rigged (p.48)
When you activate or use a unit or token that has this special ability (during a *firing action* or a *movement action*), roll a die. If the result is equal or higher than the value printed in the ability's symbol, the gear works correctly. If the result is lower, the activation is wasted or the marker is discarded.
If a unit with the Engineer special ability uses a Jury-Rigged object, roll **2** dice and keep the result of your choice.

Loudspeakers (p.48)
The player who has this unit may play music during the game. If two units both have this special ability, the player that has the *initiative* imposes his choice in music.

Minesweeper (p.48)
The unit that has this special ability does not need to roll a die when entering a square adjacent to one or more Mine tokens. Do not reveal any of the Mine tokens.
If the unit moves through more than one mined square, it may not use this special ability.

Objective (p.48)
This unit can be used as an objective in a scenario.

Snitch (p.48)
This unit can reveal concealed units within a number of squares equal to the value printed on the ability's symbol, even if it has no *line of sight* to them.

Stacking (p.48)
These units may share a square occupied by an infantry unit, even if it's an enemy unit. There is no limit to the number of units you can stack in the same square. Each unit that has this special ability inflicts a cumulative **-1** penalty to every die roll of every unit in that square.

Transport (p.49)
This vehicle can transport infantry units. Use the following chart to determine how many units it can embark.

Units that have the symbol on their visible side, as well as Characters, count as **1**. All other units count as **2**.

Infantry units do not block *LoS* of embarked units.
Heavy weapon units (outlined in red) cannot fire from a vehicle unless they have the Fire on the Move special ability, in which case the corresponding penalty does not apply.

SPECIAL VEHICLES

Churchill ARK (p.49)
At the start of the game, put the bridge on the Churchill ARK on its 'Tank' side. At the end of a *movement action*, the Churchill ARK may deploy the bridge behind it (turn the Bridge marker over and place it on the battlefield). You may not deploy the bridge diagonally. You may not deploy the bridge on a square occupied by another vehicle.

Trailer
The trailer attaches to the rear of a vehicle that has the same (but inverted) symbol. The trailer follows this vehicle during its moves, ending its move in a square just vacated by the vehicle. As long as the trailer is attached to the vehicle, the vehicle may use the special ability in the Trailer symbol.
The trailer may be targeted separately.

Mortar Carrier (p.50)
The Mortar Carrier turns the red explosion *templates* of all the units in its *ZoC* into black *templates*.

Sherman Crab (p.50)
When the vehicle uses its flail, its movement is reduced by **2** points.
During its *movement action*, the vehicle discards any Mine tokens adjacent to the squares it moves through.
It also discards barbed wire tokens it moves through.
If this vehicle stops on a square occupied by an infantry unit, roll a die, and the unit suffers a *Hit* on a result of **5** or higher. Then, if the unit survives, it is moved per the movement rules and receives a *Suppressed marker*.
If the infantry unit has a **0** or **X** movement, it is *Destroyed*.

GUARDIANS' CHRONICLES P.68
DEVIL BOY P.69
DUST P.70

TERRAIN EFFECTS

DEFENSIVE BONUSES

Any unit in this terrain receives the bonus if the colour of the unit's defence type is the same as the colour of the *terrain element*'s symbol. Add the bonus printed in the symbol to the unit's *defence value*.

WATER

Units that do not have the Amphibious special movement may not enter a Water element (see page **40**). Units with this special ability may move in *water* normally while all others are automatically, *Destroyed* (and removed from the game) if they somehow find themselves partially or fully entering a Water square.

HOLE

Infantry units inside this *terrain element* do not block the LoS of units outside the element, however they do block *LoS* for other infantry units in the same element. Note that the corners of the *terrain element* block *LoS* when a unit fires at units in the same element (example **C**).

CONTOUR LINE

A *contour line* is one that separates two areas that are different elevations.

Shots that cross a red line have their range limited to one square beyond the line, unless the shooter or the target is adjacent to the *contour line*.

Effects of *terrain elements* that reduce *line of sight* apply their effects normally, and infantry units block

Infantry units block *line of sight* if both the shooter and the target are infantry units.

Depending on the type of terrain (hill, bridge, beachetc.), the *contour line* may affect the movement of crossing units.

FORDS

These elements are Water areas that can be crossed by any unit, even those that are exclusively aquatic.

Some previous versions of terrain tiles with this element show neither a symbol nor a border. You can recognise them by their visuals, and they are subject to the same rules.

IMPASSABLE

No unit may enter this element. Any unit that somehow finds itself partially or fully entering such a square is automatically *Destroyed*. If the unit is a vehicle, put its wreck as close as possible to the Impassable element without being in it.

NO PASSAGE

It is impossible to move between the two squares linked by this symbol. In addition, *LoS* is blocked.

IMPASSABLE TO SOME UNITS

These elements prevent certain units from entering.

OBSTACLES

This element completely blocks *lines of sight*.

This element obscures *LoS* and reduces the firepower.

If the *obstacle* symbol is yellow, the penalty applies only when the target is an infantry unit.

In addition to blocking *LoS*, elements with this symbol also block Indirect Fire and grenade throws..

WALL

Walls are elements that are too steep to enter without appropriate gear or a special ability.

DIFFICULT PASSAGE

As soon as a unit moves into or through this element, it must immediately stop its move.

In order to move through a *Difficult Passage* area, the unit can only move a single square at a time, ending its move after each one.

A unit that occupies more than one square is no longer affected by a *Difficult Passage* element as soon as the front of the counter (or the rear if it is moving backwards) is no longer in the element.

ELEVATED POSITION (dominant position)

A unit in an *elevated position* can fire at units outside the element as long as its *LoS* does not cross any square of the elevated position or any walls of the *elevated position*.

A unit in an *elevated position* is less hindered by *obstacles* that block or reduce *line of sight*. So when the *LoS* of a unit in an *elevated position* crosses a *terrain element* or a vehicle, the only affected squares are those directly adjacent to the vehicle or terrain.

If the *line of sight* crosses several obstacle squares, count all the modifiers.

But if the target is not directly adjacent to a vehicle, terrain element, or an Obstacle, then no obstacle penalties are applied and LoS is not blocked.

Infantry units never block the *LoS* of a unit in an *elevated position*.

It is always possible to fire on an *elevated position* from another *elevated position*, unless a third one blocks the *line of sight* between them.

A unit that can be targeted by a unit in an *elevated position* can in return target the elevated position or the unit within.

Elevated positions block the *LoS* of units in other *elevated positions*.

STRESS

This element is one that unsettles nearby units. Put a *Suppressed marker* on any unit that ends its move within a number of squares equal to the value printed in the symbol of the *terrain element* and that has a clear *line of sight* to the element. As long as the unit stays within range of the stressful element and has a *LoS* to it, it cannot discard *Suppressed markers*.

STRUCTURES

Some *terrain elements*, such as buildings or wrecked vehicles are *structures*. In order to destroy them, you need to deal as many demolition points as are printed on the symbol (see Destruction, p.**40**). Once this number has been reached, turn the terrain element over onto its rubble side, or, if it is a wreck, remove it from the game.

DIFFICULT TERRAIN

When an infantry unit moves into a *terrain element* that bears this symbol, it immediately gets a *Suppressed marker*.

Immediately apply the -2 penalty to the unit's movement value. If the unit still has unused movement points, it can keep moving. An infantry unit can move into a *difficult terrain* square by spending its last movement point. The unit must keep the *Suppressed marker* as long as it stays in the *difficult terrain* element and discards during the Supply Phase of the turn it leaves the element.

REFERENCE SHEET

ORDER PHASE

1- Resolve all the following effects in the indicated order:
- special abilities
- action cards
- recruitment options
- scenario specific effects

2- Count the number of Order tokens you are entitled to.
Sudden Death: If a player doesn't have an Order token to assign to his units (except for a Bluff), that player immediately loses the game.

3- Place your tokens so you can read the numbers and your opponent cannot.
No more than a single Order token per unit!
The player who has the *initiative* places all of his Order tokens on any units in his army, then his opponent does the same.
Players may decide to place their Order tokens simultaneously.

4- Resolve every End of Order Phase effects in the following order:
- special abilities
- action cards
- recruitment options
- scenario specific effects

ACTIVATION PHASE

SUPPLY PHASE (new sequence)

1- Resolve all related effects at the beginning of the Supply Phase in the following order:
- recruitment options
- scenario specific effects

2- Discard all Bluff tokens from all the players' units.
The player who has the *initiative* plays first and must take the following actions in the indicated order:

3- Discard all *Madness markers* from units that don't have a *Suppressed marker* and return them to the Bag of Madness.

4- Make all required Terror check for units in his army.

5- Move all or part of the units in his army that don't have Order tokens, *Activated marker* or *Madness marker*.

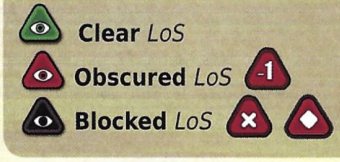

6- Discard one (and only one) *Suppressed marker* per unit.
Once the first player is done, the other player does the same.

7- Resolve all related actions at the end of the Supply Phase in the following order:
- special abilities
- action cards
- recruitment options
- scenario specific effects

8- Discard as many cards as you wish, then draw until you reach your maximum hand size as indicated by the scenario.

9- Move the *initiative* marker one notch on the turn counter, and turn it over to determine who now has the *initiative*.

LINES OF SIGHT

LONG RANGE SHOT

Shots over 7 squares are considered long range and suffer a **-2** penalty to the final result of the die roll.

MOVEMENT SEQUENCE

Declare movement actions and any assaults
- Possibility of Fire on the Move
- Possibility of Opportunistic Fire (if Fire on the Move)

Move 1 square or change of state on the spot (zero move)
- Check whether a concealed moving unit should be turned over and revealed
- Possibility of Fire on the Move
- Possibility of Opportunistic Fire
- Repeat this movement sequence until the end of the *movement action*.

End of the movement action
- Resolve any assaults
- Check whether enemy concealed units should be turned over and revealed

FIRING RESOLUTION

Declare type of fire (normal or Suppression) and name target.

Calculate the modified combat value
- *Combat value* of the unit
- Fire on the Move penalty (if the unit uses the Fire on the Move special ability)
- Miscellaneous bonuses (gear, action cards...)
- Double the attack bonus (if the unit uses the Suppressive Fire special ability)
- Split the attack bonus (if the unit uses the Machine Gunner special ability)
- Roll one die (**2** dice if the unit has the Dual Weapon special ability)
- Highest die roll **+** modified *combat value*
- Subtract penalties from final result of die roll (*Suppressed markers*, range, *obstacles*, action cards...)
- Apply *damage/Hit* or give markers.

PENALTIES INFLICTED BY SUPPRESSED MARKERS

Each marker inflicts a **-2** penalty to ALL of the unit's die rolls, except scattering and destruction.
This penalty is not subtracted from the unit's attack value but from the final result of the die roll.

Each marker also inflicts a **-2** penalty to *movement value*. If this value drops to zero or less, the unit is immobilised.
A unit that is given a *Suppressed marker* during its *movement action* completes its *movement action* without taking into account the marker's penalty.

Furthermore, enemy infantry units ignore a suppressed unit's *zone of control* .

In order to cast a spell, a character must not have any *Suppressed markers* (nor *Madness markers*).

A unit receives a Suppressed marker when:
- A vehicle or a large creature ends its *movement action* in the space it occupied,
- The vehicle in which it embarked is *Destroyed*,
- The building where it is located is *Destroyed*,
- It is covered by the Flamethrower *template*,
- It suffering the effects of an action card
- It used the Dropped option and is deployed with an Order marker during the Order Phase,
- It uses the Lions of Carentan option,
- It uses the Heroic option,
- It casts a spell or is a victim of a spell.

TERRAIN ELEMENTS

BOCAGE / HEDGEROW (p.20)

Impassable to Vehicles / Difficult Passage / Obstacle / Defence Bonus (Infantry)

FALAISES (p.20)

Paroi - Ligne d'élévation - Passage difficile - Interdit aux véhicules

Une unité sur une case falaise ne bloque jamais les lignes de vue.

THICKETS AND FORESTS (p.21)

Obstacle / Defensive Bonus (infantry)

Squares at the heart of a forest are *Impassable* to vehicles.

HILLS (p.21)

Contour Line / Difficult Passage

Hills are elements surrounded, usually completely, by a red *contour line*.

Two units firing at each other from different hills use normal elevation rules.

CAVES (p.21)

Impassable / Obstacle / No Indirect Fire

Cave walls make Indirect Fire impossible.

It is also impossible to target an *interspace* overlapped by a cave marking.

MUD (p.21)

Impassable to Vehicles / Difficult Passage

SWAMP (p.21)

Difficult Terrain / Impassable to Vehicles

A unit that has the Amphibious special movement treats swamp squares as normal squares.

MOUND (p.21)

A mound square is identified by a yellow border adjacent to a contour line.

A unit in a mound square does not block a *line of sight* that changes elevation across the red line to which it is immediately adjacent, but it does block *LoS* in every other case.

UNDERWATER PASSAGES (p.22)

Blue arrows indicate you can move under the *terrain element*. However, you are not allowed to stop under it.

BEACH (p.22)

Contour Line / Difficult Passage / Impassable to Light Vehicles

Certaines tuiles de terrain représentent la plage et la ligne défensive allemande. Ces tuiles de terrain représentent la plage et la ligne défensive allemande. Il y a donc deux types de niveau. Le sable et l'herbe. Le sable est à un niveau inférieur à l'herbe.

Si le tireur et sa cible sont au niveau de l'herbe, la ligne rouge n'a aucun effet.

DEFENSIVE OBSTACLES

Barbed Wire (p.22)

Difficult Passage (only infantry)

Vehicles equipped with a Culling Hedgerow Cutter can discard a Culling Hedgerow Cutter marker to remove ALL the barbed wire tokens they encounter during their move.

Units that have the Engineer special ability can use a *movement action* or a *firing action* to remove a barbed wire token in their *ZoC*.

Czech Hedgehog (p.22)

Impassable to Vehicles / Obstacle

Three metal bars welded together, Czech hedgehogs sprouted up all over the beaches of Normandy like weeds.

DEFENSIVE POSITIONS (p.22)

Bonus défensif (infanterie) - Interdit aux véhicules légers et/ou lourds - Obstacles (variables)

Defensive positions come in many varieties (sandbags, foxholes, etc.). Most of them are *Impassable* to light vehicles and some are so for all vehicles.

Some reduce *LoS*, in which case the whole terrain tile reduces *LoS*, not just the illustration of the *terrain element*.

Defensive Positions protect the units inside, unless the firing unit is also inside. This is also true during an assault.

Some enable infantry units to take Opportunistic Fire during the Activation Phase. Opportunistic Fire provided by Defensive Position cannot target units that are also inside the element.

TRENCHES (p.22)

Defence Bonus (Infantry) / Impassable to Light and/or Heavy Vehicles / Obstacle / Hole

A unit inside a trench is protected from a firing or assaulting unit, unless the attacking unit is also inside the trench.

A unit that moves into or out of a trench must stop its move, unless its *movement action* crosses a section of the trench that has a

ladder.
Moving within a trench, or from one trench to an adjacent one, does not interrupt movement provided the two joined trench sides are linked by a passage.

Diagonal movement inside one-square trenches is impossible.
The *ZoC* of a unit outside a trench does not affect a unit moving in the trench, but does affect that unit if it leaves the trench.
The *ZoC* of a unit in a trench is restricted to the trench.

BUILDINGS (p.23)

(Variable) Bonus défensif- Interdit aux véhicules légers et/ou lourds - Obstacles - Structure

BUNKER (p.24)

Bunkers cannot be *Destroyed* and infantry can never enter through their windows by playing a card or using a special ability.
Units, gear, or explosion templates that have the Demolition special ability can attempt to stun units inside bunkers by targeting them directly or by targeting the bunker. Roll as many dice as indicated in the Destruction symbol. If at least one die rolls a **5** or a **6**, put a single *Suppressed marker* (no more than one) on each unit in the bunker.
Concealed units are not affected.

LARGE BUILDINGS(p.24)

These buildings cannot be *Destroyed*, but their walls can be breached to create an opening.

STAIRS (p.24)

Some buildings are made up of several tiles. The main one is placed on the battlefield and the others are placed next to it.In order to reach a higher floor (such as the top of a bell tower) or a lower floor (such as a basement) of a building's secondary tile, you need to go from a square with a Stairs symbol to another square with a Stairs symbol. Take the unit and put it on the Stairs square of the building's secondary tile.
The unit must stop its move up or down on that square.
A unit that is on a Stairs square can fire on a unit in the square of the element that is either above or below and that also has a Stairs symbol.

The target unit receives a bonus to defence from the floor it is on.

A unit that is on a Stairs square can throw a grenade up or down from one floor to the next.
When drawing the *LoS* from a unit in a building's secondary tile, connect it to the corresponding red dot on the main tile (the one on the battlefield).

This *LoS* is restricted by the markings on the walls of the secondary tile, which you then reproduce on the main tile.
Range is measured from the red dot.

FLOORS (p.24)

Some buildings have several floors. They can be together on a single secondary tile or spread over several secondary tiles.
Each of these floors can be *Destroyed* individually.
When a floor has received the required number of Destruction markers, turn it over on to its 'rubble' side. Higher floors are not affected and the Destroyed floor still provide access to any floors above or below it.
When a floor is *Destroyed*, units on that floor receive a *Suppressed marker*.
When a floor reduced to rubble has received as many Destruction markers as printed in the *floor* symbol, it is completely *Destroyed* and so are all the floors above it.
Units on these *Destroyed* floors are also *Destroyed*.
Remove completely *Destroyed* floors from the game.

STILTED STRUCTURES (p.25)

An amphibious unit can move under some *terrain elements* that are usually restricted to land units (non-amphibious).
Consider the squares under the terrain element as if the element wasn't there.
An amphibious unit may not be the target of Opportunistic Fire when in any squares under the element.

A unit that goes under such an element may not stop until it has completely moved through and out.

When a stilted structure is on top of two Water or marsh areas, it forms a passage between them.

FREE BATTLE MODE

?					4 !	6 !
150 - 249	2 - 4 terrain boards 1 - 2 terrain tiles	1 neutral 10 points	2 5 points	2 - 3	25	30
250 - 349	4 - 6 terrain boards 2 - 3 terrain tiles	1 neutral 15 points	3 5 points	3 - 4	35	40
350 - 499	4 - 6 terrain boards 3 - 4 terrain tiles	1 US 1 German 20 points	4 5 points	4 - 5	40	45
500+	6 terrain boards 4 - 6 terrain tiles	1 US 1 German 1 neutral 15 points	6 5 points	5 - 6	50	60

GO!

Once you've defined all these elements, build your army, and select the the action cards for your deck (minimum **40**).

Prepare the turn chart with Event markers on turns **4** and **6** as a reminder to check the victory conditions, as well as the END marker on turn **8**.

Determine the *initiative* and put that marker on its appropriate side in square **1** of the turn chart.

Draw **4** cards and launch hostilities!

If no player has won the game at the end of turn **4** or **6**, the player who scored the most victory points at the end of turn **8** wins.

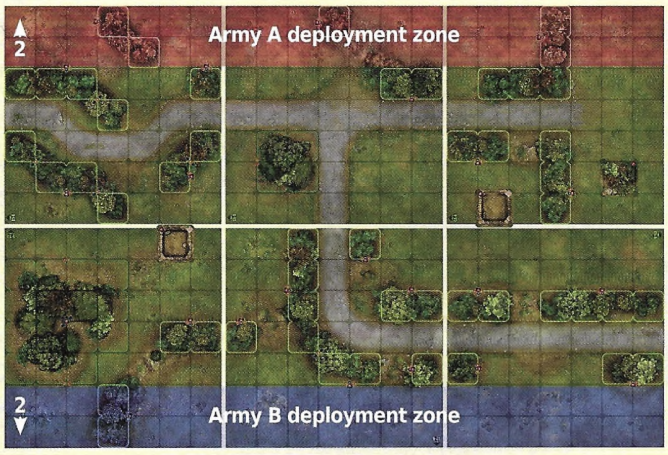

SETUPS AND MODIFIERS

The following examples are designed for a **250**-point and **6**-gameboard battle. Terrain tiles have been positioned over deployment areas for optimal visibility, but they are part of them.

Feel free to change the configurations. If you are going for a smaller game, adjust the deployment areas accordingly.

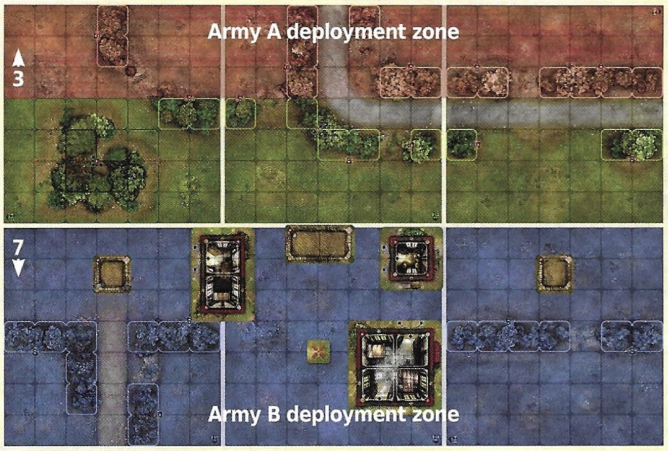

Confrontation

The simplest scenario. Two armies clash ...

Attack/Defence

One of the two armies is defending, the other is attacking.

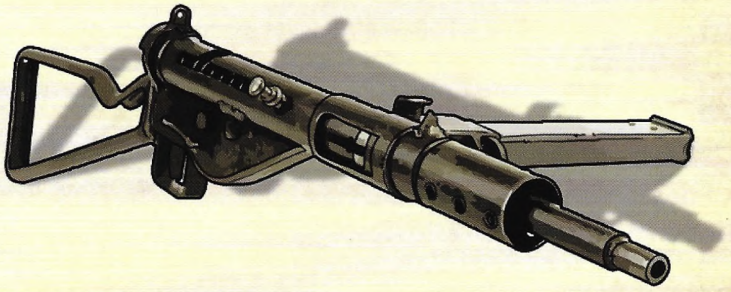

There is a single objective, its colour is the colour of the attacker and you place it in the defender's deployment area.

The defender gets **75%** of his total available army points but takes as many *terrain elements* as indicated in the Battlefield column and places them in his deployment area.

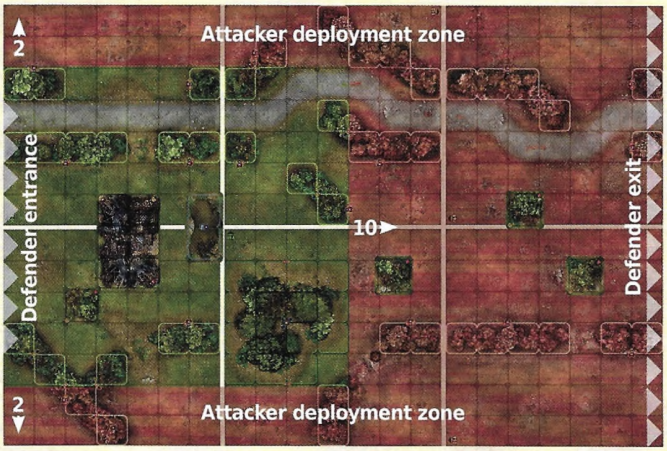

The game ends when the attacker has taken control of the objective (attacker's victory) or at the end of turn **8** (defender's victory).

To make it more difficult for the defender:
The defender gets **50%** of his total army points but still takes all of the terrain tiles as indicated as indicated in the Battlefield column and places them in his deployment area.

Ambush

One of the two armies is defending, the other is attacking.

The attacker gets **50%** of his total available army points.

The game ends when the defender moves his last unit off the board through the side indicated by the blue arrow, or at the end of turn **8**.

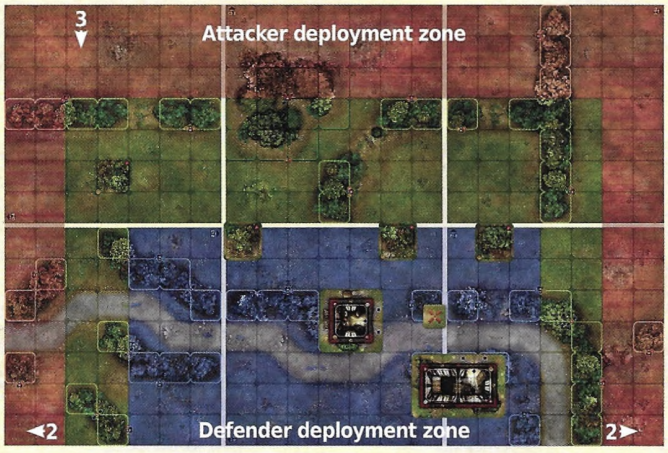

To make it more difficult for the defender:
The attacker gets **75%** of his total army points.

Major victory for the defender:
If over **50%** of his troops escaped.
Minor victory for the defender:
If only **25%** of his troops escaped.

Major victory for the attacker:
If none of the defender's troops escaped by the end of turn **8**.
Minor victory for the attacker:
If less than **25%** of the defender's troops were able to escape.

Destruction

One of the two armies is defending, the other is attacking.

There is a single objective, its colour is the colour of the attacker and you place it in the defender's deployment area inside a terrain tile that you do not count in the total indicated in the in the Battlefield column..

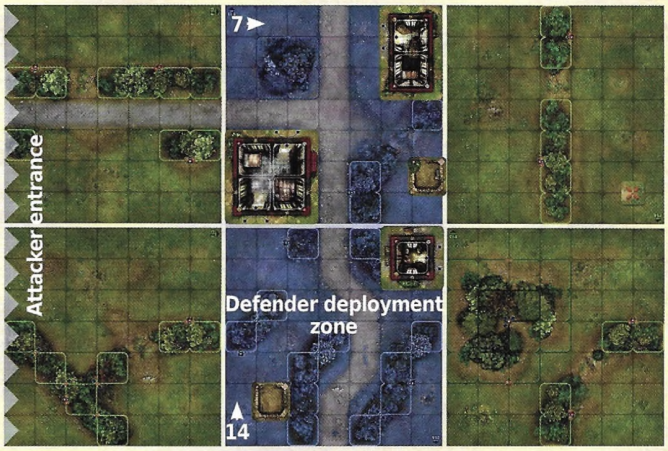

The defender gets **75%** of the total army points available but takes all of the terrain tiles as indicated in the Battlefield column and places them in his deployment area.

The attacker places the Dynamite and Detonator markers onto two of his infantry units. They are *light objects*.

The game ends when the attacker has *Destroyed* the objective (attacker's victory) or at the end of turn **8** (defender's victory). Destroy the objective by moving an infantry unit into the terrain tile and putting Dynamite and Detonator markers on it.
You cannot placet both markers on the same turn!

To make it more difficult for the defender:
The defender gets **50%** of his total army points but takes all of the terrain tiles as indicated in the Battlefield column and places them in his deployment area.

Punching through

One of the two armies is defending, the other is attacking.

There is a single objective, its colour is the colour of the attacker, and you place it as far as possible on the opposite side of the board from where the attacker enters.

The game ends when the attacker has taken control of the objective (attacker's victory) or at the end of turn **8** (defender's victory).

The defender gets **75%** of his total available army points but takes all of the terrain tiles as indicated in the Battlefield column and places them in his deployment area.

To make it more difficult for the defender:
The defender gets of his **50%** army points but takes all of the terrain tiles as indicated in the Battlefield column and places them in his deployment area.
