Activation Phase: All ordered units may do one of the following: Move, fire or assault

Move

Pre-requisites

- If suppressed, unit movement number must be greater than the sum of your suppression counter deductions.

Steps

1. Determine your movement allowance.
2. If suppressed, deduct the suppression value.
3. Move that number or fewer squares.

Notes

- Diagonal moves are allowed and cost the same as a 'normal' move
- Units may 'pass through' friendly units
- Units may not end their movement on a square occupied by another unit
- You may move into an enemy's zone of control but you may not move further than one square into it.
- You may move into an enemy's zone of control and then immediately out of it.
- You may not pass into terrain with an 'impassible' icon.
- You must stop your movement when moving into terrain.

Taking a hit

All units start with the 'flip' symbol side face up if they have one. If they do not they start with the 'skull' symbol visible.

Taking a hit:

1. If the unit has a 'flip' symbol visible then the unit is flipped over.
2. If the unit has a skull symbol visible then it is eliminated.

Taking suppressive fire:

One suppression token is placed on the unit. All statistics are reduced by 2 for the duration of the suppression.

Fire

Pre-requisites

- Unit must be able to fire on target. If the corresponding attack bonus shield has an 'x' in it you cannot fire at this target.
- Unit must have line of sight on target.
- Unit must be in range.

Steps

1. Roll 1d6
2. If suppressing, double all combat bonuses. Only units with the suppress icon can suppress.
3. Add attacking unit combat bonus
4. Add any card/equipment bonuses played by the attacker. This is the **attack result**.
5. Take the defense value of the defending unit and add any defensive terrain values. (terrain with a negative number warning icon). Firing through more than one space with a defensive terrain value is cumulative
6. Add card/equipment defensive bonuses played by the defender. This is the **defense result**.
7. If the **attack result** is greater than or equal to the **defense result** of the target unit the target unit takes a **hit**.
8. If the **attack result** is greater than or equal to twice the **defense result** then the defender is **eliminated**

Notes

- Line of sight
  - Determined from the center of the firing unit to the center of the target unit.
  - Units block line of sight.
  - Terrain with an 'x' warning icon block line of sight.

- Range
  - The defender is 'in range' if they are 7 or less spaces from the attacker. Some units have limited range marked on the icon.
  - At greater ranges, a -2 modifier is applied to the attacker's result.

Assault

Pre-requisites

- Unit must have the 'assault' icon.
- Assault is launched from a free space adjacent to defender.
- Unit must have enough movement points to move into the defender's space.

Steps

1. Move attacking unit to overlap the defending unit.
2. Attacker rolls 2d6 and keep the higher die.
3. Attacker adds combat bonus.
4. Attacker adds any card or equipment bonuses. This is the **attack result**.
5. Defender rolls 2d6 and keep the higher die if they can assault. Rolls 1d6 if they cannot.
6. Defender adds combat bonus.
7. Defender adds the defense bonus of the terrain they occupy if applicable (unless both attacker and defender share the a defensive position)
8. Defender adds any card or equipment bonuses. This is the **defense result**.
9. The player with the higher result wins
   - If the attacker wins:
     - Defender takes a hit.
     - Defender retreats one space away from attacker. If they cannot retreat they are eliminated.
     - Attacker moves into defender's space
   - If the defender wins:
     - The attacker takes a hit.
     - The attacker moves back to the last space it held.
   - Tie
     - The attacker and defender remain in the spaces they occupied before the assault.
