- ATTACK/DEFENSE

One of the two armies is defending, the other is attacking.

There is a **single objective**, with the army badge of the attacker, and you place it in the defenders's deployment zone.

The defender gets **75%** of his total available army points but takes as many **Terrain Elements** as indicated in the Battlefield column and places them in his deployment zone.

The game ends when **the attacker has taken control of the objective** (attacker's victory) or **at the end of turn** 8 (defender's victory).

To make it more difficult for the defender:
The defender gets **50%** of his total army points but still takes all of the terrain tiles as indicated in the Battlefield column and places them in his deployment zone.

- AMBUSH

One of the two armies is defending, the other is attacking.

The attacker gets **50%** of his total available army points.

The game ends when **the defender moves his last unit off the board through the side indicated by the arrows**, or **at the end of turn** 8.

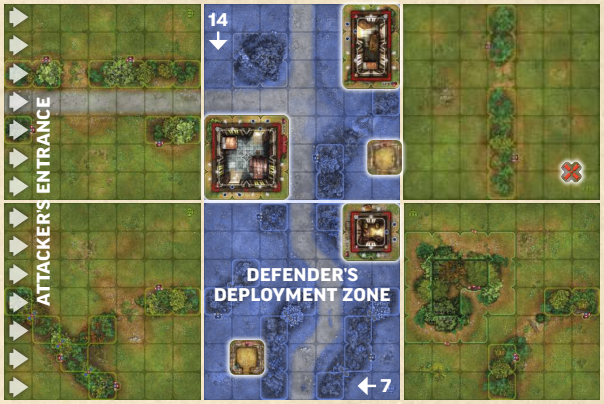

To make it more difficult for the defender:
The attacker gets **75%** of his total **army points**.

- **Major victory for the defender:** If over **50%** of his troops escaped.
- **Minor victory for the defender**: If only **25%** of his troops escaped.

- **Major victory for the attacker:** If none of the defender's troops escaped by the end of **turn** 8.
- **Minor victory for the attacker:** If less than **25%** of the defender's troops were able to escape.

- PUNCHING THROUGH

One of the two armies is defending, the other is attacking.

There is a single objective, There is a single objective, with the army badge of the attacker, and you place it as far as possible from where the attacker enters, on the opposite side of the board.

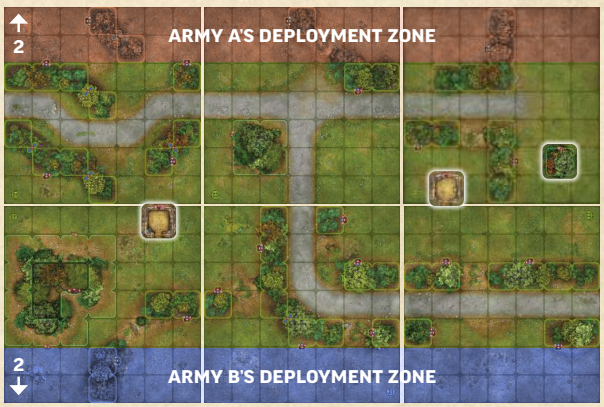

The defender gets **75%** of his total available army points but takes all of the terrain tiles as indicated in the Battlefield column and places them in his deployment zone.

The game ends when **the attacker has taken control of the objective** (attacker's victory) or **at the end of turn** 8 (defender's victory).

To make it more difficult for the defender:
The defender gets **50%** of his army points but takes all of the terrain tiles as indicated in the **Battlefield** column and places them in his deployment zone.

- CONFRONTATION

The simplest scenario. Two armies clash...

SUMMARY

RULES

2 - MULTI-PLAYER GAMES

3 OR 4 PLAYERS

In this type of game, players can be part of an alliance (i.e., a group of several players). The game is played as normal, except for the following changes:

VICTORY CONDITIONS

The game does not end when a player in an alliance is eliminated, and the alliance is not disbanded.

ARMY CREATION

After setting the number of **army points** per alliance, each player must select at least one **Recruitment Tile** that provides at least one unit.

WARNING: The number of army points for each alliance must be divided evenly between all members of that alliance.

RECRUITING A HIGH COMMAND TILE

The alliance can purchase a single **High Command Tile** (**Recruitment Tiles** that have no units but only squares for **Recruitment Options**). The total cost of this **High Command Tile** and its selected options is split between all the players in the alliance any way they want, shares need not be equal. The **Recruitment Options** of the **High Command Tile** may be used by all of the alliance's players.

Regarding **recruitment options** that involve markers and tokens (such as **Battle Plan**), put markers on them from all the armies in the alliance.

WARNING: This does not allow more than the standard number of tokens or markers to be used, it just allows each player a matching token for their faction.

Example:

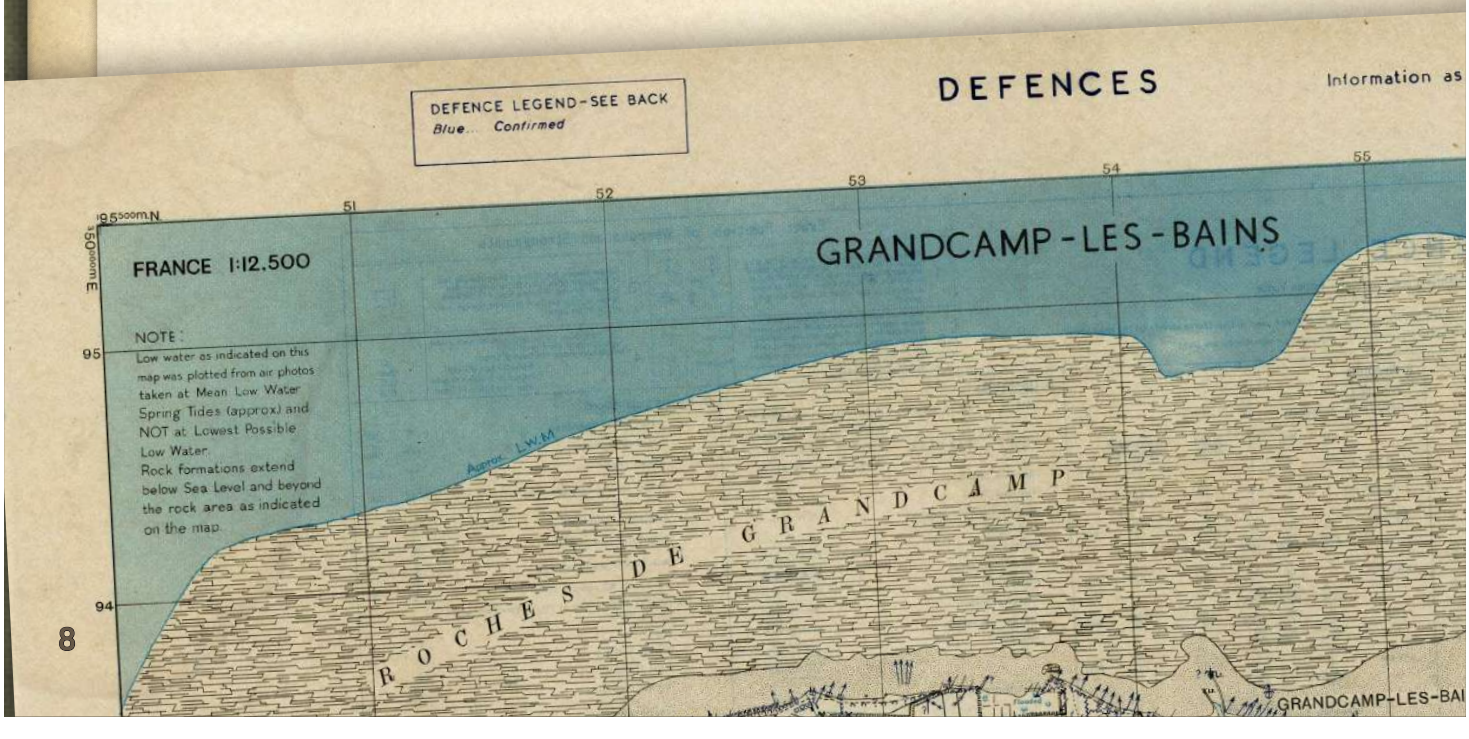

- *Battle Plan gives you a **Special Order Token**, so each alliance player puts a **Special Order Token** on the **Battle Battle Plan** Orders option. If an Alliance player then draws the **High Command** Action Card that lets him use a **Special Order Token** for the turn, he can take it off the **Battle Plan** so he can use it, and return it to the **Battle Plan** so he can use THAT option at some point later in the game. In other words, he can "take it back" because of the **Action Card's effect**.*

- *The Americans with their (either FFI or British) allies acquire the **Planning** Orders option. 1 **Order Token** is given to the alliance (not 1 per player), so each player puts an **Order Token** of his colour on the **Recruitment Option**. Each turn, the players in the alliance determine which of them will get to use the **Order Token** for that turn, but the token should be returned to the **Recruitment Option** at the end of the **Supply Phase**. If another player in the alliance needs an **Order Token** after a **Tactician** Action Card has been played, he may take the appropriate token even if it is his tenth token, as long as there are never more than 10 **Order Tokens** per alliance.*

Recruitment Options related to the **High Command Tile** must still heed the colour stripes on the edge of the option's slot. Therefore, **recruitment options** provided by an allied army from a different nation may NOT be placed in the **High Command Tile** slots since the colour stripes will not match.

ACTION CARDS

When there is a **High Command Tile**, the deck must belong to the same faction as that tile. When there isn't a **High Command Tile**, players who belong to the alliance must choose the deck they will play. One of the players in the alliance must belong to this faction. The number of **Action Cards** that you draw in the **Supply Phase** depends on the number of players in the alliance:

1 player: 6 cards .

2 players: 3 cards each .

3 players: 2 cards each .

- Allied players may show each other their **Action Cards** .
- During the **Supply Phase** only, players can move **Action Cards** from one player to the other.
- The players can target the enemy with their **Action Cards** , but cannot target an allied unit. Any army wide bonuses (such as **Fury of the Führer**) thus only affect the forces of the one who played the **Action Card**.

INITIATIVE AND ORDER OF GAME

During game preparation and at the beginning of each **Order Phase**, allies must decide in what order they will play. Use appropriate markers to indicate this order on the turn track.

DEPLOYMENT

Each player deploys in order of **Initiative** and in playing order within the alliance. The first player in the alliance that has the **Initiative** must deploy, then the first player of the other alliance, then it's on to the second player in the alliance that has the **Initiative**...

ACTIVATION PHASE

In the **Activation Phase**, players **activate** their units in the previously determined order and alternating with the opposing alliance. A unit may not attack an allied unit (including assault and fire).

MOVEMENT

A player's units may move through squares occupied by allied **Infantry Units**. Usual movement rules apply.

SUPPLY PHASE

Players move their **unactivated** units in the previously determined order.

RECRUITMENT OPTIONS

Recruitment options that concern nearby units are applied to both owned units and allied units, provided the allied player accepts. The **Initiative Orders option** enables the alliance who owns it to keep the **Initiative**.

SPECIAL ABILITIES

Any **Special Ability** that affects one's own units (such as **Transport**) also affects allied units, provided the allied player accepts. Similarly, any **Special Ability** requiring the presence of or the **LoS** from one's units (such as **Substitute** or **Artillery Spotter**) can call on an allied unit, provided the owner accepts.

2 VS 1 AND 3 VS 1 PLAYER GAME

The amount of Numbered, Special, and Bluff Order Tokens is respectively restricted to 10, 2, and 2 per ALLIANCE, which means there is only one **Bluff Order Token** per alliance that has no appropriate recruitment option. The single player is subject to the same restrictions as in a 1 vs 1 game.

When a game pits a single player against two or three, **Initiative** is handled a bit differently. The single player activates two units while his opponents activate one each, alternating one at a time.

- **Single Player A** has the **Initiative**, he activates **Order 1**; his first opponent, **B**, activates his, **player A** then activates his **Order 2**; his second opponent, **C**, activates his **Order 1**, and so on.
- During **deployment**, the single player deploys his whole army on his turn.
