ACKNOWLEDGMENTS

First and foremost, thanks to Yann and Clem for creating an elegant and deep game system that opens itself up to such easy rules customization, while still retaining the core mechanics that make it so great.

Thank you also to Dean Ray Johnson, for creating his great "Unofficial Rewrite," which I used as a template for this rule set, and much of which remains intact.

INTRO

This ruleset is not intended to "fix" *Heroes of Normandie*. *Heroes of Normandie* is a great game and does not need fixing! Rather, this ruleset is meant to give players of *Heroes of Normandie* more options. Rather than a Hollywood-style battle, this ruleset tries to capture realistic tactical action, while retaining the elegant combat rolls, great artwork, and deep army customization that sets *Heroes of Normandie* apart from more "realistic" platoon or company level games. On top of this, I am of the opinion that, if you peel back some of the silly veneer of *Heroes of Normandie*, the core mechanics are actually more realistic than some other games considered realistic (particularly with the hit/defense system, how units change when wounded, and how suppression functions). Granted, I wasn't shooting for ASL-level realism – more on the lines of *CC:E* or *CoH*.

This rulebook will assume you know the general mechanics of *Heroes of Normandie*. I used the wonderful "Unofficial Manual" by Dean Ray Johnson as a basis, basically copying it wholesale and just introducing rule changes in their appropriate sections, so there will still be explanation of the basic rules - but that is not the focus. At the end, I also added a ruleset for playing *Heroes of Normandie* with an I-Go U-Go format.

INDEX OF CHANGES

BONUS TACTICS REMOVED 2
MODIFIED DECKS 2
ELITE AND FANATICAL UNITS 4
SOLO INFANTRY UNITS 4
OFFICERS 4
STACKING UNITS 4
IMMUTABLE RULE OF SUPPLY REMOVED 6
CLOSE RANGE AND POINT BLANK BONUS 10
INFANTRY UNIT FACING AND FLANKING 11
FIRING H.E. AND HOWITZER ROUNDS INTO BUILDINGS . 11
PINNED UNITS 12
RALLYING 12
ASSAULT TIE SUPPRESSES BOTH UNITS 12
CHANGE TO URBAN FIGHTER TRAIT 12, 17
INFANTRY ROUT 13
SUPPRESSION FROM ARTILLERY/ AIRSTRIKES . . . 13
BUNKER BUSTING 14
CHANGED RIFLE GRENADE MECHANICS 14
CHANGED OPPORTUNITY FIRE MECHANICS . . . 14
DICE MITIGATION SYSTEM 16
REMOVED TILES AND UNITS 16
CHANGED SNIPER ABILITY 17
CHANGED MG NEST UNIT 16, 19

QUICK SETUP

1. Choose a Scenario from the Scenario Book, or create your own.
Most of the scenarios from the Scenario Books will not translate well to this ruleset because of the modifications (heroes being removed, bonus tactics being removed, etc). Typically the best way to play this ruleset is by creating a balanced "meeting engagement" scenario of your own, where the two sides start on opposite sides of the map, with some neutral objective(s) in the middle (a bridge, a church, etc.). Then decide upon an equal *Mustering Point* total for both armies. The objective can be as simple as to have the most points from controlling objectives by the end of round X, to hold a main objective for X uninterrupted turns, or even to score X points from breaking enemy units.

2. Use recruitment tiles and recruitment options/units to build your army.
This mechanic is unchanged. However, due to realism concerns, some options are unavailable using this ruleset. For instance, nearly all heroes are removed. In addition, recruitment tiles giving unrealistic powers ("Nazi Basterds" and "Camo") are removed. For a (semi) complete list of removed tiles, see p. 16. But in general, use your own sense of realism as far as which tiles to keep and which ones to remove.

3. Orders are still provided by units and recruitment options granting stars.
This mechanic is also unchanged. When a unit granting a star is removed from the game, your army loses some leadership and cohesion, and thus loses some efficiency and effectiveness.

4. Bluff tokens still provide a false order.

5. Terrain Tiles Form the Map
Place the terrain tiles shown in the scenario's description. For example, if the scenario lists C3-A, place the C3 tile with the A-side up.

Terrain tiles C3-A and C1-B

6. Terrain Overlays Modify Terrain Tiles
Place terrain overlays, such as buildings or defensive positions, on the map.

7. Objectives Are a Team's Goals
Place objectives on the map. Team-specific objectives show which team can capture an objective.

8. Bonus Tactics are removed.
Bonus tactics are a lot of fun in the base game, but they are not well-suited for a traditional hex-and-counter type game.

9. Initiative Marker Shows Which Team Has Initiative
Place the Initiative Marker on Turn 1 of the Turn Counter. Place the American side up or the German side up, as shown in the scenario. In a custom scenario, whichever player has the most Order Stars starts with Initiative.

10. Event Markers and the End Marker Mark Special Turns
Place the End Marker and any event markers on the Turn Counter.

This Turn Counter shows:
- The Americans have initiative on Turn 1.
- A neutral event occurs on Turn 2.
- An American event occurs on Turn 3.
- A German event occurs on Turn 5.
- The battle ends on Turn 7.

11. Setup Text Changes the Battle
The scenario describes any unique setup rules. Also note the scenario's events and victory conditions.

12. Deploy Units in the Deployment Zones Players deploy their units on the map, anywhere in their own deployment zones. The player with initiative, whose team shows on the Initiative Marker, deploys all units first. Then, the opposing player deploys all units.

Only one unit can occupy each square!
(Exception: see *Stacking*, p. 4)
Large vehicles may occupy two squares!

13. Units Have Different Sides
Deploy units with the appropriate side up.

Infantry with Side and Side: Deploy with side up.
Infantry with a Flip Ability: Deploy with either side up. See *Special Abilities* on p.16.
Vehicles: Deploy with functioning side up (not the wreck side).

14. Create Your Action Card Deck. For a more hex-and-counter style experience, the effect of cards is limited. Unrealistic and non-thematic cards are removed, but 14 cards that provide some tactical flexibility, unpredictability, and "fog of war" are retained. When *Artillery* and *Airstrikes* are mustered, the player may choose to remove other (non-*Artillery* or *Airstrike*) cards from the deck, as long as the total remains at 14 or more. The (minimum) 14-card deck is then re-shuffled.

List of the fourteen cards to be used: *Battle Rage (2), Bullet Storm (2), Communications Scrambled (1), Confusion (1), Driven Back (1), Dynamic (1), Fall Back (1), Initiative (1), No!/Nein! (1), Second Chance (3).*

15. Draw Cards for Opening Hands
Players draw 2 action cards for their opening hands. Players then can draw 1 card per Supply Phase if they wish, for a maximum hand of 3 cards. Players can also discard up to one card during the Supply Phase. Players may look at their drawn card before choosing which card to discard to meet the 3-card hand limit.

Note: You may also choose to play without cards. To do so, see how Artillery and Airstrikes are handled in the "I-GO U-GO" variant (p. 19).

ARMIES

Recruitment Tiles and Recruitment Options
Recruitment tiles provide the base of an army, including basic units and slots for recruitment options. Recruitment options provide additional units, equipment, and other bonuses.

Equipment and Traits: Recruitment options with red text are equipment or traits, which provide bonuses or single-use tokens to other units from that recruitment tile, including units from options on that tile. See *Equipment* on p.18.

Recruitment Tile Slot Bonus: If a tile's left-hand slot shows an order star, then place a recruitment option with units in that slot to gain a bonus order token! However, you lose the order token if the option flips. See *Breaking Points* on p.15.

Hero Options: Hero options aren't placed onto a recruitment tile. Hero units can use the equipment of any of your recruitment tiles!

Field Command: Field commanders supply your entire army. Any unit in your army may use the equipment on a field command tile!

The Veteran option is a trait, not equipment, so heroes and field commanders can't share it! See p. 5.

Units

Armies deploy the units shown on recruitment tiles and options. A unit's abilities and values appear on its token.

Unit Name: Damaged units' names appear red.
Insignia: Matches the unit's recruitment tile or option.
Outline: Yellow—officers, red—heavy weapons, dark—heroes.
Special Abilities: The unit's abilities. See *Special Abilities* on p.16.
Combat Bonus: These shields show the unit's bonuses when attacking an infantry, light vehicle, or heavy vehicle.
If the bonus is X, then the unit can't attack that enemy type!
Hit: Units with aren't destroyed when hit. Instead, flip these units to the side.
Defense: Attacks against the unit must tie or exceed this number.
Movement: The squares that the unit moves with a movement order.

Note: *Elite* and *Fanatical* Units

Some units are classified as Elite or Fanatical, which effects their morale. See p.12

Elite: All airborne units, Ranger units, and commando units are considered Elite.
Fanatical: All political and resistance units (such as SS and FFI) are considered Fanatical.

Infantry (orange shield)

Infantry are the grunts and scouts of an army. Some infantry have machine guns, bazookas, or other heavy weapons.

Flip! All unit tokens are double-sided.
- Infantry with can survive one hit.
- Infantry with a Flip special ability have different values on each side. See *Special Abilities* on p.16.

Special types of Infantry

Gun: Gun infantry are a little larger than one square, but they still only occupy one square.

Solo Infantry: An infantry unit showing only on unit on the tile is a Solo Infantry unit. Solo Infantry units are usually officers, NCOs, specialty units such as snipers or spotters, or heroes. Solo Infantry differ from regular infantry units in several ways:

Solo Infantry can only assault other Solo Infantry. Though it surely happened, one soldier assaulting and driving back five defenders should not be happening routinely in a realism variant.

Solo Infantry can defend an assault from a multiple-soldier unit, but they lose any assault bonuses and roll only one die. If defending an assault from another solo unit, however, their bonuses apply.

Officers and NCOs: These units have the same assault restrictions of all regular solo infantry units. However, they have some leadership abilities not had by non-Officer/NCO solo infantry units.

Immune to Pinning. Officers and NCOs cannot be Pinned, regardless of how many Suppression tokens they receive.

Rallying. An officer or NCO unit can Rally a Pinned unit. To do so, the Officer or NCO must be adjacent or diagonal to the Pinned unit. If that Officer or NCO is ordered, the player can declare that the Officer/NCO is Rallying the unit. Rallying is considered a "null action," such as deploying a heavy weapon or entering ambush mode. In other words, an officer can move, fire, or perform another action, and then subsequently Rally a unit. When a unit is Rallied, remove the Pinned token immediately, but any Suppression tokens remain (however, you will still remove a Suppression token as usual before the end of the Supply phase).

Stacking. Officers and NCOs can use a null action to "stack" with a non-solo, non-gun infantry unit, if on the same space. The player simply declares they are "stacking" and then places the Officer/NCO atop the infantry unit. Once a unit stacks, an Activated token is placed – neither the stacked unit nor either of its component units can take any further action that turn. A stack can consist of only two tiles.

Unstacking. Before or after any move, a stacked unit can separate. This is a "null action," just as flipping a recon tile or deploying a weapon. Place the tiles next to each other on the space they share to signify that they have unstacked. They cannot be stacked again until the next turn.

Stacked Units: Once a unit is stacked, it behaves differently than a standard unit in several ways.

Special Abilities. A stacked unit retains all the special abilities listed on either tile. (When using Ambush, if one unit has ambush and the other does not, flip the unit with the Ambush side up, and place it atop the other unit to signify they are both concealed.)

Note: both component units retain their weapon ranges. In order for both units to combine fire, they must both be within range of the enemy. See *Firing with Stacked Units* below.

Movement. A stacked unit moves at the speed of its slowest component unit. One order moves the entire stack, and the units cannot be ordered individually while stacked. If one unit in the stack is autonomous, that order moves the whole stack.

Firing with Stacked Units. Once a unit is stacked, the "to-hit" bonuses stack, as long as the target is within range of both units. If the stacked unit wishes to fire at an enemy within range of only one of the component units, any bonuses from the out-of-range unit do not apply.

If DuBois stacks with the Vickers unit, the stacked unit would share the Barrage, Suppression, and Machine Gun abilities, and would have a movement value of 0 while the Vickers bipod is deployed.

If this stacked unit wishes to fire at an infantry unit within 4 spaces (whether to suppress or to hit), both component units are within range, so both bonuses apply (+2 and +4 = +6). However, if the stacked unit wishes to fire at a unit beyond 4 spaces, only the Vickers unit can reach the target, so the bonus is +4.

Receiving Fire. When a stacked unit is fired upon, use the defense number of whichever component unit is lower (usually this will be the base unit). If the stack is hit (either by an attack or in an assault), the owner of the stack chooses to assess the hit to the larger unit or the officer. **Exception:** A sniper firing on a stack using his sniper ability can select which unit he is targetting.

Assaulting and Defending Assaults. Use the assault iconography of the unit within the stack with the most favorable assault abilities. The bonuses do not stack.

Both of these stacked units would assault with two dice and a +1 bonus.

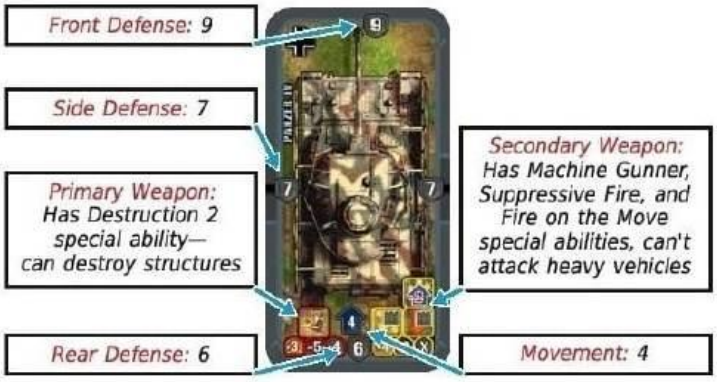

Light Vehicle (purple shield)
Some light vehicles are transports, recon jeeps, or mobile guns.

Heavy Vehicle (gray shield)
Most heavy vehicles are tanks.

Primary Weapons and Secondary Weapons: Heavy vehicles have two weapons, usually a main turret and a machine gun. These vehicles can fire both weapons with one order!

Defenses: Heavy vehicles may have a different defense value on the front, sides, or rear. An attacker shoots through the defense in its line-of-sight. See *Firing / Defense* on p. 9-10

Flip! When hit, flip a vehicle to its wreck side. A wreck may block movement and line-of-sight.

Outlined Units

Officers (yellow outline): Most officers have order stars ★, which provide orders while the unit survives.

Heavy Weapons (red outline): These infantry may have strong special abilities, like Machine Gunner or Indirect Fire. See *Special Abilities* on p.16.

Heroes (dark stripes): Hero units may use the equipment on any of your recruitment tiles.

Action Cards

Players can hold up to four action cards, and can (but do not have to) draw one during each supply phase.

Phases: Play action cards at any time during the card's phase. Resolve the card's text, then discard the card.

- Order Phase
- Activation Phase
- Supply Phase
- Any Phase

Initiative: If different players want to play cards at the same time, then the player with initiative plays first. The opposing player may see which card is played before deciding whether to play a card in response.

Last In, First Out: When multiple cards affect the same action, resolve the last card played, then resolve the card played just before that, and so on.

Airstrikes! When you play an Airstrike card, your opponent rolls a die. If the roll ties or exceeds the Airstrike's AAA number, discard the card without effect.

You may play any number of cards during any turn, any phase, or even any single action!

Custom Armies

Some scenarios provide each player with a number of army points, which can be spent to recruit a custom army. A recruitment tile or option costs army points as shown on its lower edge.

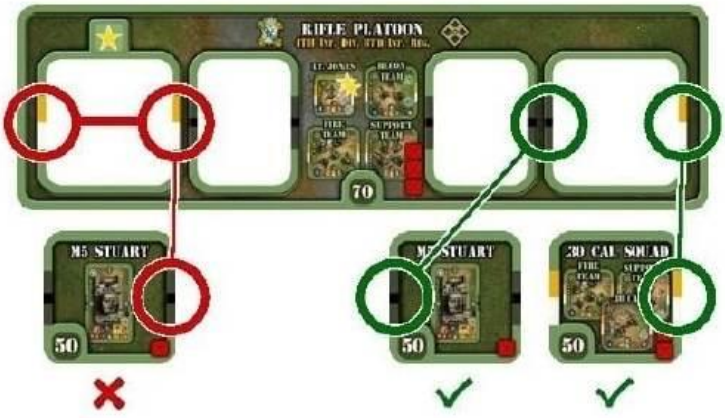

A small 200-pt. German army might recruit this tile and its options for 190 army points—65 points for the recruitment tile, 100 points for unit options, and 25 points for equipment options.

Recruitment Tiles: You may recruit multiple recruitment tiles, but options on a tile can't affect units from other tiles.

Field Command: An army of 200 army points or more may recruit a field command tile. Any unit in the army may use the equipment on this tile.

Recruitment Options: Options must be placed on a recruitment tile's option slot. The option must match the slot's size and the stripes on either side of the slot.

Hero Options: Hero options are not placed onto recruitment tiles. These options provide the hero unit shown.

Any army may recruit heroes with a generic insignia (American ★ or German ✚). Some expansion heroes have division insignias. You cannot recruit these heroes unless you also have a recruitment tile with the hero's insignia.

ACTION!

Each turn of a battle contains 3 phases:

1. Order Phase! Players place order tokens to secretly choose the order of their units.
2. Activation Phase! Players reveal order tokens, starting from Order #1, and order their units to move or fire.
3. Supply Phase! Players move their unactivated units and reset their armies.

Order Phase

1. Determine Initiative
The Initiative Marker (on the Turn Counter) shows which player has initiative, Americans ⚙ or Germans ✚.

2. Place Order Tokens, Number Side Down
The player with initiative places any of that team's order tokens, with the number side down, on a unit from that team.

3. Players Alternate Placing Order Tokens
- The player with initiative places any order token.
- The opposing player places any order token.
- The player with initiative places another order token.
- The opposing player places another order token...

4. Place Final Order Tokens
When a player places the team's last order token, the other team places all remaining order tokens.

No more than one order token per unit!

Activation Phase

1. Reveal Order Token #1
The player with initiative reveals that team's Order #1 token.

2. Issue an Order
The player with initiative orders that unit to move, fire a shot, or take a special action.

3. Players Alternate Order Tokens in Numeric Order
- The player with initiative gives an order to the Order #1 unit...
- The opposing player gives an order to the Order #1 unit...
- The player with initiative gives an order to the Order #2 unit...
- The opposing player gives an order to the Order#2 unit...

The player with initiative always reveals and orders first.

4. All Orders Revealed
The Activation Phase ends after all units with order tokens have activated.

More About Order Tokens!

Bluff Tokens: Place bluff tokens like other order tokens. Units with bluff tokens don't activate, but they may move during the Supply Phase!

Special Orders: Place special order tokens like other order tokens. You may reveal a special order token and give its unit an order whenever you would reveal any other order token.

- After your special order, reveal your order token for the current number and give that unit an order as normal.
- A special order cannot interrupt another order. Finish an order before issuing a special order.
- The player without initiative may use a special order to act first in a round, issuing the special order on Order #0. (If both teams attempt to act on Order #0, then the player with initiative acts first.)

Personal Order: A hero with a gray star ★ provides an order token, but its owner must give that unit an order token (and not a bluff token) every turn!

Max Orders! A team cannot have more than 10 order tokens and 2 special order tokens, even if action cards or recruitment options could provide more!

Activated Units Cannot Act! Units gain Activated markers when they use special abilities to act out of order. When a unit receives an Activated marker, it loses its order token and cannot receive an order! However, you do not have to reveal that order token to your opponent!

Destroyed Units! When a unit is destroyed, its order token is removed. That team issues no orders on that order number!

Supply Phase

The Immutable Rule of the Supply Phase is no more.
But only units who have **opportunity fire** can shoot during the supply phase.

1. Beginning of Supply Phase
Resolve any effects that occur at the beginning of the Supply Phase, such as action cards, special abilities, or scenario events.

2. Remove Bluff Tokens from Units
Units with bluff tokens may move during this phase.

3. Player with Initiative Moves Units
You may issue a movement order to any units without order tokens or Activated markers. First, the player with initiative moves any of that team's unactivated units. See *Movement* on p.8.

4. Opponent Moves Units
When the player with initiative is done moving units, then the opposing player moves any units.

5. Remove 1 Suppressed Marker
Each unit loses one (and only one) Suppressed marker.

6. End of Supply Phase
Resolve any effects that occur at the end of the Supply Phase.

7. Discard up to one card and draw up to one card.

8. Objectives
An objective is controlled if one team—and only that team—has a unit adjacent to it.

9. Victory Conditions
Check the scenario's victory conditions to see if either team has achieved its goals.

Disarray: If a team can no longer issue orders to units, then it loses the battle! See *Disarray* on p.15.

End Marker: If the End Marker is on this turn of the Turn Counter, then the battle ends!

Victory Points: In a custom scenario, check each team's victory points for a possible early victory. See *Breaking Points* on p.15.

10. Count Order Stars
If a unit with stars ★ is destroyed, its team loses that many order tokens, beginning with the highest-numbered tokens.

11. Move and Flip Initiative Marker
Move the Initiative Marker to the next turn on the Turn Counter. Flip the marker to change the player with initiative.

12. Next Turn
Begin the Order Phase of the next turn.

Supply Phase Resolution Order:
When multiple effects resolve at the beginning or end of the Supply Phase, resolve them in this order:

1. Units' special abilities
2. Action card effects
3. Recruitment option effects
4. Scenario events

The player with initiative always resolves effects first!

Event Markers! Scenario events usually affect the beginning or end of the Supply Phase.

Common *American* *German*

Option Slot Stars! When a recruitment option flips, it no longer supports the bonus star of a recruitment tile's option slot! See Breaking Points on p.15.

TERRAIN

Terrain Symbols

These symbols appear on squares of terrain tiles and terrain overlays—hindering, halting, or protecting units on the map.

Defense: Infantry units in this square (not vehicles!) gain a defense bonus. See *Firing / Defense* on p. 9-10.

Blocking Obstacles: Blocks LoS, preventing shots through the square (but not from or into the square).

Obscuring Obstacles: Obscures LoS, adding a penalty to shots fired through the square.

Types of Line-of-sight (LoS)!
LoS is the line drawn from an attacker to its target.

Blocked LoS: Crosses an obstacle (or other units)!
Obscured LoS: Crosses at least one or obstacle!
Clear LoS: Crosses no obstacles!

Difficult Passage: Units stop moving after entering this square, even if moving from one square to another within a section of terrain.

Impassable: Units cannot enter this square.

Impassable to... (Only Blocks Specific Units)

...infantry ...light vehicles ...heavy vehicles

...light vehicles and heavy vehicles

No Passage
Units may not move across this symbol from one arrow to the other.

This does not block movement across the symbol from other directions, such as from one square of this hedgerow to another.

Structure: These overlays can be destroyed. See *Destruction* on p.14.

Opportunity Fire: Grants the Opportunity Fire special ability to infantry within the overlay. See *Opportunity Fire* on p.14.

Water: Units cannot enter this square.

Terrain Examples

Thicket: Infantry often sprint from one group of trees to the next, advancing from covered positions.

- Defense to infantry
- Obscures LoS

Forests: Thick tree cover provides a good place to hide.

- Defense to infantry
- Obscures LoS
- Blocks vehicle movement (only in squares touching arrows)

Hedgerow: The Norman hedgerows were a nightmare for the Allies. Each embankment could hide a squad of infantry, a machine gun nest, or an artillery. Crossing a hedgerow was an ordeal, especially for vehicles.

- Defense to infantry
- Halts infantry movement
- Blocks LoS
- Blocks vehicle movement
- Blocks movement across intersection (only from one arrow to the other)

Defensive Positions: Armies create safe zones within sandbags, foxholes, and trenches.

- Defense to infantry (unless the attacker is also inside!)
- Provides Opportunity Fire to infantry
- Blocks light vehicle movement

Buildings: Even in the countryside, an army may find cover in barns, sheds, and farmhouses.

- Defense to infantry (unless the attacker is also inside!)
- Blocks LoS, except through openings
- Blocks vehicle movement
- Structures can be destroyed (different buildings have different structure values)

Openings: Clear arrows point out windows and other openings. See *Building Firing* on p.11.

Entryways: Blue arrows point out doorways into a building. Entryways also count as openings. See *Building Movement* on p.8.

Walls: Red sections block LoS into and out of a building.

Multiple Obstacles! If you draw LoS through multiple squares of a forest or hedgerow, then penalize the attack for each square in LoS!

Inside Attacks! If one unit inside a building attacks another unit in the same building or defensive position, then the overlay provides no defense to the target!

Terrain Outlines! Terrain icons apply to an outlined area of terrain. For example, a forest on a tile obscures any LoS that passes through the forest's outline—even if the LoS doesn't pass through the actual artwork of the trees!

Objectives! Objectives do not block movement or LoS!

MOVEMENT

Units usually move during two occasions:

- **During the Activation Phase,** with an order token
- **During the Supply Phase,** if the unit hasn't activated this turn

Move the unit a number of squares equal to or less than its movement value 4.

Infantry Movement

- An infantry, officer infantry, and gun infantry.
- Each unit occupies one square, though officers are smaller than a square, and guns are larger than a square.

Diagonal Movement Allowed: For each square of movement, move the infantry into any of the eight adjacent squares.

Can Pass Through Friendly Infantry (but No Other Units): Infantry can pass through friendly infantry but must end in an empty square. Exception: see Stacking, p.4.
Vehicles and enemy infantry block movement.

Overlapping Units: Gun infantry units are a little larger than one square, but they still only occupy one square. Guns may overlap into squares containing terrain or other units.

Suppressed: Each Suppressed marker on a unit reduces its Movement by -2. A unit with zero Movement is immobilized!

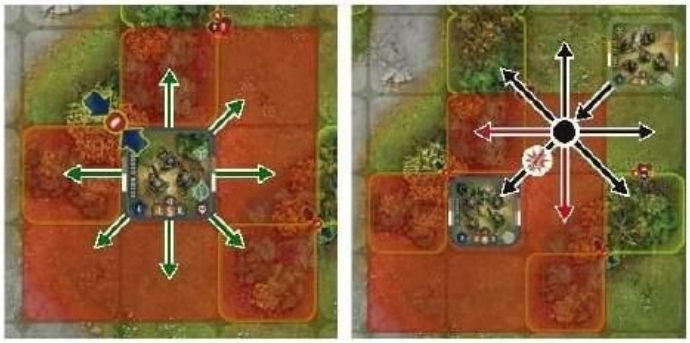

Flip: Units with a Flip icon may flip once per movement, either before or after moving. See *Special Abilities* on p.16.

Flip units cannot flip more than once per movement.

Zone of Control (ZoC): Infantry units form a zone of control in the eight squares adjacent to them. Infantry may freely move in and out of an enemy's ZoC, but they cannot move from one square of an enemy's ZoC to another square of the same ZoC.

Blocked ZoC: Building walls and impassable symbols block ZoC.
Suppressed ZoC: Units with a Suppressed marker do not exert ZoC.
Vehicles: Vehicles have no ZoC and ignore enemy ZoC.

- An impassable symbol blocks this infantry's ZoC.
- Once an enemy infantry moves into ZoC, it cannot move to another square of that ZoC. (Unless it assaults the enemy! See p.12.)

Building Movement: Blue arrows are entryways, pointing to squares inside and outside of a building. Infantry may move from one of these squares to another as one square of movement, ignoring the half-squares surrounding the building. White arrows are windows or small openings. Units can enter and exit through these, but only on the ground floor, and doing so causes their movement to end immediately.

Alley Movement: The half-squares between adjacent buildings may create an alleyway. Infantry units may pass through and stop in alleyways. An infantry standing on a blue arrow may move into a building as one point of movement.

ZoC Around Buildings: ZoC extends into the half-squares around a building. A unit cannot cross a half-square in enemy ZoC when moving from or to a different square in that ZoC.

1.- This Fire Team could enter an adjacent building as one square of movement, moving across a blue arrow
2.- The Fire Team could move three squares and stop in an alley
3.- The Fire Team could move two squares to enter this building from an alley
4.- This unit can move around inside the building, but Enemy ZoC prevents units from entering or leaving!

Vehicle Movement

- A one-square light vehicle, two two-square light vehicles, and a heavy vehicle.
- No matter the token's size, a one-square light vehicle only occupies one square, while larger vehicles occupy two squares.

Occupy One or Two Squares: A one-square vehicle only occupies its own square (and may overlap into any square). A two-square vehicle only occupies two squares, even when placed diagonally.

One-square Vehicles Move in Eight Directions: The Willys .50 Cal and the Zündapp may move in any direction, as infantry do.

Two-square Vehicles Move in Six Directions: For each square of movement, a two-square vehicle can move:
- forward into the square ahead
- forward into the square 45° left or right
- backward into the square behind
- backward into the square 45° left or right

- Vehicles may combine forward movement, backward movement, and rotation in the same movement order.

Rear Follows Front: When a two-square vehicle moves one square forward, move its rear into the square previously occupied by its front. Reverse this when backing up.

Placement: When a two-square vehicle moves, it points in the direction that it moves, even when moving diagonally.

Rotation: Two-square vehicles can rotate 45° on their rear squares, moving their fronts into an adjacent square, as one square of movement.

- This German light vehicle has 6 movement. It moves forward two squares, rotates two squares, and backs up two squares to hide among the hedgerows.
- This vehicle can overlap diagonally with adjacent terrain.

Ignore Diagonal Obstructions: A two-square vehicle may overlap with units and terrain when placed diagonally. When moving diagonally, a two-square vehicle can pass by and even stop between buildings and terrain.

- Terrain doesn't block diagonal movement unless it blocks the intersection at the corners of squares.

Vehicles Block Movement: Vehicles cannot pass through each other.

Pass Through Infantry: A vehicle may pass through infantry units, both friendly and enemy.

Stop On Infantry: If a vehicle stops on an infantry, the infantry's owner redeploys the infantry to any adjacent square. If the infantry cannot move to an adjacent square, or if the infantry has 0 movement, then the infantry is crushed and destroyed (even if the infantry shows !)

Crushing Wrecks: Some wrecks are not impassable to heavy vehicles. Heavy vehicles deal one Destruction damage to these wrecks when moving onto them. See *Destruction* on p.14.

Movement Resolution Order
When resolving multiple special abilities, use this order:

1. Choose movement type (e.g. regular, Assault)
2. Fire on the Move shots
3. Move 1 square (or 0 squares for zero movement)
4. Spot concealed units
5. Opportunity Fire shots
6. Assault resolution (when moving into an enemy's square)
7. Repeat from Step 2 for each square of movement, including the final square

Zero Movement! You may order a unit to move zero squares, which allows it to flip or use special abilities related to movement!

Supply Phase! During the Supply Phase, you may give a movement order to each unit that didn't receive an order token or an Activated marker. These units may flip before or after moving. (But no shots or assaults during the Supply Phase!)

Transports! Vehicles with this icon can carry infantry units! Infantry cannot be hit while riding a Transport! See p.18.

FIRING

During the Activation Phase, you may order a unit to fire instead of ordering it to move.

1. Line of Sight (LoS)
Draw a straight line from the center of the attacker's square to the center of the target's square, the line-of-sight.

Blocked LoS: If LoS passes through a vehicle or a blocking obstacle, then the shot fails.

Infantry Block LoS to Infantry (But Not to Vehicles): Vehicles are taller than infantry, so draw Clear LoS through infantry units when the attacker or the target is a vehicle! Infantry draw Blocked LoS through other infantry units to a target infantry.

Two-square Vehicles: Draw LoS from (or to) the center of either square occupied by a two-square vehicle.

Corners: Obstacles and tokens have rounded corners, so obstacles don't affect LoS drawn through the corner of a square.

Concealed: Concealed units do not block LoS. See *Ambush*, p.16.

1.- Clear LoS
2.- LoS blocked by hedgerow
3.- LoS blocked by infantry
4.- Clear LoS around hedge corner
5.- Infantry in middle don't block LoS between vehicle and infantry

2. Range
Most shots have unlimited range, but shots take a -2 long-range penalty against targets more than 7 squares away.

Distance: A target adjacent to the attacker is at Range 1. This is also referred to as **Point Blank** range. A target with one space between its space and the attacker is at Range 2, or **Close Range**.

Shortest Path: Count each diagonal square as one square when counting the distance to a target.

Limited Range : Some weapons have limited range and cannot shoot past that range.

This unit has an easier shot targeting the tank's rear square.

3. Roll Attack Die
The attacker rolls a six-sided die.

4. Defense
The target's largest shield shows its defense value.

Heavy Vehicle Targets: When attacking a heavy vehicle, draw LoS through one edge of the vehicle (to the center of a square) and use the defense shield on that edge.

Corners: LoS drawn through a heavy vehicle's corner hits the front or rear defense.

5. Combat Bonus
The attacker adds its appropriate combat bonus to the attack roll.

Replacement Combat Bonus: Some equipment tokens and blasts have combat bonuses. With these attacks, use the token's bonuses instead of the unit's bonuses.

A unit cannot attack a target with an X Combat Bonus!

6. Other Bonuses and Penalties

Long-range: Reduce the attack roll by -2 against a target more than 7 squares away. A Limited Range shot can only receive this penalty if it can hit a target beyond 7 squares.

Obscured : Reduce the attack roll by -1 or -2 for each obscured square in the LoS. Ignore obstacles in the attacker's square and the target's square.

Terrain Defense : Increase a target infantry's defense by the terrain bonus in its square.

Suppressed: Reduce the attack roll by -2 for each Suppressed marker on the attacker.

Recruitment Options: Equipment and traits provide bonuses to units on the same recruitment tile. Orders provide bonuses to any unit in the army. See p.18.

Range Bonus: When an infantry unit fires at any enemy from **Close Range** or **Point Blank** range, the attacker gains +1 or +2, respectively, to its direct fire attack. If the unit is firing at multiple units, such as with the Machine Gunner ability, the bonus applies only to the first target.

Note: Only direct fire weapons get these bonuses.

This bonus applies to infantry firing from inside vehicles.

Optional rule: Light vehicles with infantry-manned external machine guns pictured on the tile also receive this bonus when using their anti-infantry secondary fire.

If an equipment token or action card affects a roll, you must play it before rolling the die!

7. Resolution
The attack hits if the die roll ties or exceeds the target's defense, with all bonuses and penalties included.

Attacker: Rolls 4 + 2 combat bonus vs. infantry + 1 Ammo token = 7
Target: 4 defense + 2 hedgerow defense bonus = 6
Attack roll wins—the target is hit!

8. Hit Units

Infantry with : The unit can survive one hit. Flip it over to its side.

Infantry with : The unit is destroyed. Remove it from the map.

Light Vehicle : The vehicle is destroyed but remains on the map as a wreck. Flip the unit over.

Heavy Vehicle : Roll a die, then place the matching damage marker on the vehicle. No bonuses or penalties affect this roll.

The Zündapp and MG Nest are too small to become wrecks. Remove them from the map when hit!

The Machine Gunner and Suppressive Fire special abilities provide special shots! See p.17.

Heavy Vehicle Damage!
When a heavy vehicle suffers damage, roll a die, then place a damage marker matching the roll onto the vehicle.

1—Crew: The vehicle can only fire one weapon per firing order.

2—Track: The vehicle cannot move. It halts immediately if hit while moving.

3 or 4—Hull: Place two Suppressed markers (and this damage marker) on the vehicle. It halts immediately if hit while moving.

5—Primary Weapon: The vehicle cannot fire its primary weapon (red).

6 or more—Destruction: Destroy the vehicle.

Breached: Destroy the heavy vehicle when it has two copies of any damage marker (such as two 1—Crew markers).

Destroyed: Flip a destroyed heavy vehicle to its wreck side.

Kill Shots: Attack Roll = Defense x2!
A kill shot is an attack roll that ties or exceeds a number equal to twice the target's defense (with all bonuses and penalties included). This immediately destroys the unit, even heavy vehicles or infantry with !

Other Firing Rules

Facing: Infantry units have a "facing." The top of the tile, opposite from the shields showing damage bonuses and defense, is the unit's "front." A unit is "facing" any enemy within a 120 degree arc (see illustration below).

Changing Facing. An infantry unit can move in any direction, regardless of its facing. An infantry unit can change its facing at the beginning of its Order, before moving or firing. This does not cost any movement points. An infantry unit can also change its facing after completing a move (but not after completing a shot). An infantry unit cannot change its facing during a move.

Bullets are Faster than Facing. If a unit triggers Opportunity Fire during its movement, its facing cannot be changed until after the Opportunity Fire shot is resolved.

Effects of Facing. The main effects of Facing are determining which units can be fired upon, and which units are flanked.

Firing: Even if it has line of sight and is within range, an infantry unit can only fire at a target it is facing.

Flanking: Whenever an infantry unit is fired upon by an enemy it is not facing, it is being Flanked. This is considered a Close Range attack (+1 to attack roll).

Note: Because this is a Close Range attack, you do not get an extra +1 for being within 2 squares (Close Range) *and* Flanking. Similarly, a Point Blank attack does not get any additional bonus for Flanking, because the Point Blank bonus replaces the Close Range bonus.

-Unit 1 is facing any unit on the FACING side of the red line. It can fire on any unit it is Facing, as long as it has LOS. It cannot fire on Unit 2, because although it is Facing Unit 2, it does not have LOS.

-Unit 1 is Flanked by any enemy unit on the FLANKED side of the red line. If Unit 3 fires upon Unit 1, it gets the Close Range bonus (+1 to hit).

Multiple Weapons: Heavy vehicles have a primary weapon (red) and a secondary weapon (yellow). These vehicles fire both weapons with one firing order.

- Roll a different attack die for each weapon.
- Each weapon may choose a different target.

Activated Markers: When a unit gains an Activated marker, it loses its order token. That unit cannot move or fire later in the turn.

Take a Shot: When you order a unit to fire, it takes a shot at an enemy. A unit can replace any shot with a special ability or token that replaces a shot. For example, a unit with the Suppressive Fire ability or access to Panzerfaust tokens could use those to replace an Opportunity Fire shot.

Firing Arcs. Some units have a 90° firing arc. These units draw LoS between the red triangles on the token from the dot in the center of the unit, and can only target within this arc. When these units end move, the firing arc edge must end on the edge of a square. **Note:** if a non-vehicle unit with a firing arc is Assaulted from outside the arc, add a Suppressed token before resolving; if it is fired on from outside the arc, it is considered Flanked.

Building Firing: If an infantry inside a building is adjacent to an opening (clear arrows) or entryway (blue arrows), that unit may fire through that opening—or receive fire from the outside!

- Red wall sections of buildings block LoS.
- Infantry inside a building or another defensive position do not get a defensive bonus if fired upon by another unit inside.

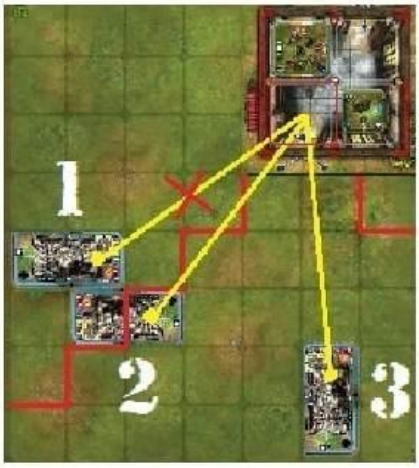

Firing Resolution Order

1. Choose shot type (e.g. normal, Suppressive Fire, Grenade)
2. Combat bonus (from the unit token or blast pattern)
3. Fire on the Move penalty
4. Equipment bonuses (e.g. Ammo)
5. Machine Gunner's bonus split
6. Suppressive Fire's bonus double
7. Roll dice
8. Penalties for obstacles, long-range, and Suppressed markers
9. Other bonuses and penalties

Howitzers and H.E. Shells: Vehicles with howitzers or HE Shells can fire into building openings in an attempt to damage units inside. The vehicle does not need to obtain a valid unit to target inside the building: rather, the vehicle targets the first square inside the opening. If the vehicle has a 45 degree firing angle or less to the center of the target square, with direct LoS, (see illustration) then resolve the indicated blast inside the building, centering the blast on any interspace touching a corner of the target square.

Tank 1 cannot fire in the designated door, as the angle is too great.

Tanks 2 and 3 can fire an HE Shell inside the door. (Note that the angle can be drawn to either square of the tanks, as LoS from a 2-square vehicle can be drawn from either of its squares)

Effects of Suppressed Markers

Rolls: Suppressed markers reduce all of the unit's rolls by -2! Multiple markers stack multiple penalties!

Movement : Each marker reduces movement by -2! A unit with zero movement is immobilized!

Mid-Movement: If a unit gains Suppressed markers while moving (because of an Opportunity Fire shot), it finishes its movement order before gaining the movement penalty.

Zone of Control (ZoC): Suppressed infantry do not exert ZoC. Enemy infantry can freely move past a Suppressed unit!

Unaffected: Heavy vehicle damage rolls, Dispersion rolls (see p.13), and Destruction rolls (see p.14) are not penalized by Suppressed markers.

Lose One Marker Per Supply Phase: During the Supply Phase, units remove one Suppressed marker. Units with multiple Suppressed markers still only lose one marker each. See p.6.

Pinned: If unit has three Suppression tokens, it is Pinned. Add a Pinned token (event (!) token). Pinned units cannot be ordered and cannot defend when assaulted (the unit automatically loses the assault, but still rolls one die to see if it is Routed. See p.13).

A Pinned unit removes one Suppressed token in the Supply Phase. A unit only recovers from Pinned status when all Suppressed tokens have been removed, when an officer Rallies the unit (see Solo Infantry, p.4), or if the unit Rallies itself (see Elite Units and Fanatical Units, p.4). If one of these events occurs, remove the Pinned token.

Wounded units: wounded (red side up) units become Pinned when they receive their second Suppression token. If a full-strength unit has two Suppression tokens and subsequently becomes wounded, when flipping the tile to its wounded side, add a Pinned token.

Rallying: A pinned unit can become rallied, either by an Officer/NCO (see p.4), or for Elite and Fanatical units, by a self-rally (see Elite and Fanatical Units, p.4). To attempt to rally itself, an Elite or Fanatical unit rolls a die at the beginning of the Supply Phase. An Elite unit rallies itself on a result of 4 or more; a Fanatical on 5 or 6. A rallied unit immediately removes its Pinned token.

ASSAULT

Infantry with the Assault ability can carry out an assault order during the Activation Phase.

1. Assault as a Movement Order
Announce the assault before moving the unit.

2. Move Into Target's Square
The attacker's movement must end in the target's square.

- The attacker must assault the target from an empty square.
- The last square of this movement ignores enemy ZoC.

This Fire Team can assault the lower Fire Group, even though the last square of movement would move through the ZoC of the other Fire Group.

No Backing Out!

A unit must attempt an assault after announcing it, even if the situation changes due to action cards or Opportunity Fire shots!

3. Roll Assault Dice
The attacker rolls 2 dice and keeps the highest roll.

4. Roll Defense Dice
The target rolls a die. If the target has the Assault ability, it rolls 2 dice and keeps the highest roll.

5. Combat Bonus
Both units add the combat bonus appropriate for the opponent. If one infantry assaults another infantry, then both units add their combat bonus vs. infantry.

Heavy Vehicle Targets: Heavy vehicles defend against assaults with their secondary weapons (yellow).

6. Other Bonuses and Penalties
Add any other bonuses and penalties, including Suppressed markers, recruitment options, and action cards.

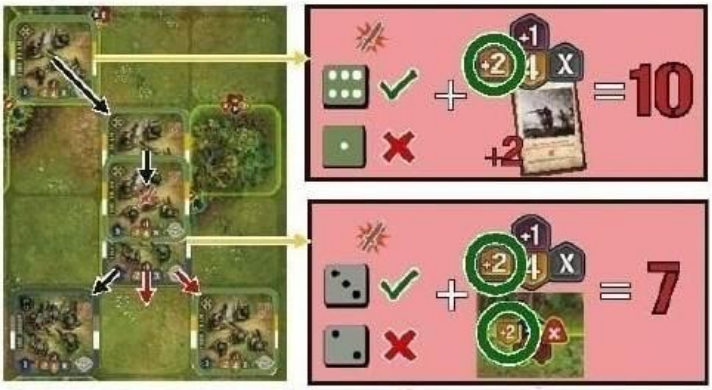

Assault Icon Bonus: If either unit's Assault icon shows a bonus, add that bonus to its roll.

Terrain Defense:
A target infantry adds the terrain defense bonus of its square to the defense roll, unless the attacker is in the same terrain.

Structure Defense: if a unit inside a walled structure is assaulted by a unit who started the turn outside the structure, the defender gets the terrain bonus.

7. Urban Fighter Trait
If a unit has the urban fighter trait, enemies receive no terrain bonus for being inside a building when defending an assault.

No Defense! Assault targets defend with an assault roll, not with their defense values! Terrain defense is the only defense bonus that affects an assault roll!

Both attacker and target have Assault , so both units roll two dice The attacker wins. The target flips to its damaged side and retreats. The target is in the ZoC of an enemy infantry, so it cannot retreat into another square in that ZoC.

7. Resolution
Compare the attacker's roll to the target's roll, with all bonuses and penalties.

Tie: Neither unit is hit. The attacker ends movement in the previous square. Both units receive a Suppressed token.

Attacker Wins: The target is hit.

Infantry with : Flip the unit over. The attacker ends movement in the target's square, and the target retreats to one of the three adjacent squares away from the assault. If the target cannot retreat, it is trapped and destroyed!

Infantry with : The unit is destroyed. The attacker ends movement in the target's square.

Light Vehicle: Flip the vehicle to its wreck side. The attacker ends movement in the previous square.

Heavy Vehicle: Roll a damage die and place a damage marker. The attacker ends movement in the previous square.

Rout: If the attacker's total is at least double the defender's total, including bonuses for both, the defender unit is removed from the board, regardless of health. Defenders cannot rout attackers.

Defender Wins: The attacker is hit. If the attacker shows , flip it to the side, and it ends movement in the previous square. If the attacker shows , it is destroyed.

Rear Assaults!
Assaults may blindside a gunner. If the target has a firing arc, and the attacker assaults from outside of the arc, then place a Suppressed marker on the target before rolling dice!

Tight Quarters!
If the attacker can't end its movement in the previous square, then the attacker is destroyed! This rarely occurs, since the attacker must assault from an empty square.

Inside Assault! If the attacker assaults from a square in the same defensive position or building as the target, then don't add the terrain's defense bonus!

Vehicles! Vehicles never retreat from an assault!

ZoC Blocks a Retreat! The retreating unit can't move from one square of an enemy infantry's ZoC to another! This doesn't affect the attacker if it must end movement in a previous square.

Transports! Infantry inside a Transport may assault directly from the Transport! Retreating infantry may retreat into a friendly Transport! See Transport on p.18.

Assaults Are Not Shots! You cannot replace a shot with an assault! Bonuses that affect shots, like Ammo tokens, cannot affect assaults!

INDIRECT FIRE

Indirect Fire shots are special shots that can arc over obstacles. However, if you can't see your target, then your shot may not land exactly where you hoped it would.

1. Target Intersection
Instead of targeting one unit or square, these shots target the intersection of lines at the corners of four adjacent squares.

Buildings: Units cannot fire Indirect Fire from or into a building. Blast patterns cannot hit units inside a building (but may damage the building!)

2. LoS and Range
You may target any intersection with Indirect Fire, even an intersection in Blocked LoS. These shots have unlimited range and take no long-range penalties. Mortars have a minimum range of 10 interspaces, and a vehicle or gun with HE shells has a minimum range of two interspaces between it and its target.

3. Blast Pattern
Find the blast pattern matching the color of the Indirect Fire icon. Place the blast with its center over the target intersection.

- The 60mm Mortar infantry has the green Indirect Fire ability .
- Place the green blast pattern at an intersection.
- This shot targets two units in the blast area.

4. Clear LoS
If the shot has Clear LoS to the target intersection (LoS crosses no obstacles), then do not roll for dispersion.

5. Dispersion
With Obscured LoS or Blocked LoS, roll a die.

1-4: Move the blast 2 intersections in the direction matching the roll. **5-6:** The blast hits the intended target.

6. Roll One Attack Per Target
Roll a different attack die against each unit touching the blast pattern.

7. Bonuses and Penalties
Add bonuses or penalties as with a regular shot, including terrain defense for infantry .

Blast Combat Bonuses: Add the blast's combat bonuses, not the attacker's bonuses.

Brown Blast: The brown blast has no combat bonuses. It uses the bonuses of the equipment or action card that fires the blast, including Artillery action cards and Grenades.

No Obstacle or Long-range Penalties: Indirect Fire arcs over terrain and ignores their penalties.

Heavy Vehicles: Blasts always hit a heavy vehicle's side defense.

Suppression. Any artillery with the Destruction icon are heavy enough to cause Suppression if they hit a non-vehicle unit, or even if they come within one space.

8. Resolution
Resolve each attack roll as with a regular shot.

-If this blast has the Destruction icon, it causes Suppression on any enemies or friendly units within the blast, or in a square bordering the blast. The tokens are placed even before rolling to see if the blast does damage.

-In this illustration, units 2, 3, and 4 receive a Suppression token. Then a die is rolled to determine if unit 3 takes damage, since it is in the blast.

Howitzer! The Howitzer ability functions like Indirect Fire, except that it can only hit targets in Clear LoS (which means no dispersion).

The attacker rolls 4 on the dispersion roll, so the blast moves two intersections east... and accidentally targets a friendly unit!

Destruction! Most blast patterns have Destruction! Resolve attacks against units, then roll destruction dice for each structure touching the blast! See p.14.

One Attack Per Target! A blast cannot attack any target more than once, even if the blast touches a vehicle or structure on two different squares!

Limited Range! If a blast attack has limited range, choose any intersection adjacent to the attacker as the origin.

Grenades
Grenade tokens allow infantry to target an intersection with the brown blast pattern. Treat this as Indirect Fire with these exceptions.

Limited Range 2 : Place the blast up to 2 intersections away. (Range 0 is any intersection adjacent to the attacker.)

No Dispersion or Obstacle Penalties: You may launch the grenade over obstacles without rolling for dispersion.

Throw From Buildings: Units adjacent to an opening can throw a grenade from inside to outside. Count the intersections at the half-square border around the building as the first intersection of range.

Throw Into Overlays: A unit adjacent to a defensive position or building opening may throw a grenade into the overlay. The blast only hits the units inside—the overlay's walls contain the blast. By throwing the grenade inside the overlay, this counts as an inside attack—the target doesn't gain the terrain's defense bonuses!

Bunker Busting: An infantry unit that starts its turn one space away from a window or door can announce a Bunker Bust at the beginning of its action. This unit can move one and only one space to move adjacent to the opening and drop a grenade inside. This is an exception to the rule that grenades, like other weapons, cannot be fired on the same turn the unit moved. Rifle grenades cannot be used for a Bunker Bust.

Notes: - If a Bunker Bust is interrupted by the attacking unit being destroyed or retreating, the grenade remains in the inventory.

- If the unit inside the building has an Opportunity Fire ability, it may fire on the attacker during the movement portion of the Bunker Bust

1.- A unit throws a grenade two intersections away.
2.- A unit throws a grenade two intersections out of a building.
3.- A unit throws a grenade using the Bunker Bust action.

Rifle Grenades. Rifle Grenades can perform Direct or Indirect fire.

Indirect fire: Maximum range 7, minimum range 4. Roll dispersion.

Direct fire: Maximum range 7, no minimum range. No dispersion roll. If firing into a building from an adjacent square, it is a direct fire attack, even if no unit inside the building is being directly targetted by attacker. Rifle grenades can be fired out of a building, but only direct fire or into another building.

Firing into Buildings. Rifle Grenades can attempt to fire into a building opening, whether or not an enemy is visible to target.

A rifle grenade cannot directly target a unit inside a building, even one adjacent to the opening, as one could with a regular rifle. The target is the inside square adjacent to the opening.

LoS. The firer must have direct LoS to the opening.

Angle. Similar to HE Shells and Howitzers, the shot has a max angle is 45 (see p.11). If the interspace from which the grenade is fired isn't direcly in line with the opening, then there is an "offset."

Resolution. To determine if the shot makes it in the opening, count the "offset" and count the range in interspaces to the opening. Add the two numbers to determine "difficulty". Roll two dice. The higher die must meet or exceed the difficulty. If so, roll to see if units inside are hit by the blast as normal. This roll counts as a dispersion roll for purposes of modifiers (no suppression, etc.)

Note: A "miss" hits the building's exterior, adjacent to the opening. Resolve a blast outside the building (units inside are not affected).

Units 2 and 3 have no offset - they have a straight line into the window, so they don't have a tricky angled shot. They have to roll their range (2 interspaces for Unit 2; 3 interspaces for Unit 3) to succeed.

Unit 1 has an offset of 2 (horizontal yellow line), and thus a trickier shot. The range to the target (represented in blue) is 3 interspaces. Thus the total "difficulty" number is 5. Unit 1 must roll a 5 to succeed.

In case of a miss, the blast would be centered on the red square.

The side above the black line (marked with Xs) is too great an angle.

DESTRUCTION

1. Line-of-sight and Range
Draw LoS and range to the target - attacker may target a structure.

Hits Units and Structures!
An attack with Destruction may target a unit or a structure. When targeting units inside a building or heavy vehicles parked over a wreck, the attack may hit the unit and the structure! Resolve the shot against the target unit, then roll destruction dice.

2. Roll Destruction Dice
Roll a number of dice equal to the Destruction icon's number and place a destruction marker on the structure for each roll of 4 or more.

3. Check Integrity
Destroy the structure when its destruction markers tie or exceed its structure icon's number.

4. Destroyed
Flip a destroyed building to its ruin side and remove its destruction markers. Remove a destroyed wreck from the map.

5. Caught in the Blast
Place a Suppressed marker on all units caught inside a destroyed building. The units' owners then redeploy the units to any squares in the ruin. The player with initiative moves all units first.

- This infantry is adjacent to an opening, so the Panzer can target the infantry with its primary weapon. This weapon has Destruction 2.
- The attack misses, but the Panzer still rolls 2 destruction dice.
- One die rolls 4 or more, so the building gains one destruction marker.

No Suppression! *Suppressed markers don't affect destruction rolls!*

Crushing Wrecks! *Heavy vehicles deal one destruction damage to a wreck when moving onto it!*

OPPORTUNITY FIRE

Any unit can take an Opportunity Fire shot, if triggered by an enemy *appearing in* or *moving in* its LOS. However, it must either have an Order token on it, the Opportunity Fire ability, or the Autonomous ability to be able to fire, and it must be Unactivated at the time it fires.

1. Triggering Opportunity Fire. A unit triggers Opportunity Fire when it moves into a space to which any enemy has LoS. A hidden unit (one in Ambush mode or behind a unit or obstacle breaking LoS) triggers Opportunity Fire if it becomes visibile in the LoS of an enemy, even if it didn't move (e.g., flips to visible side or obstacle destroyed). **Note:** a unit can trigger Opportunity Fire multiple times from the same unit, by continuing to move in the unit's LoS. The unit doesn't have to fire the first time it is triggered, but can only fire once.

2. Declaring Opportunity Fire. As soon as a unit triggers Opportunity Fire, all enemy triggered units must immediately declare whether or not they are firing (i.e., triggered unit 1 cannot wait to see if triggered unit 2 hits the unit that triggered Opportunity Fire before deciding whether to fire). All units declaring are considered Activated, whether or not they fire.

3. Firing. If a unit uses Opportunity Fire and it has the Autonomous or Opportunity Fire ability, place an Activated token on it. If a unit with an Order token uses Opportunity Fire, remove the Order. That unit cannot be Ordered when its number comes up in the Activation Phase.

4. Type of Shot. Any type of shot available to the unit can be used for Opportunity Fire. The shot is resolved just as if it were a shot taken during the unit's Activation Phase.

5. Order Sequence Does Not Matter. A triggered unit can take an Opportunity Fire shot even if its Order number has not come up yet.

6. Reserving Opportunity Fire. If a unit's Order number comes up in sequence, it may reserve its shot for Opportunity Fire, in case an enemy unit triggers it later in the turn (including during the Supply Phase). That unit's Order token is laid flat, and it takes no action that turn unless Opportunity Fire is triggered, in which case it fires as normal.

7. Roll Attack Dice
You may take the shot after any square of the enemy's movement. Resolve the attack as with a regular shot.

8. Finish Enemy Movement
If the target survives the attack, it finishes its movement.

> **Reminder:** In the Realism Variant, there is no "Immutable Rule of Supply." Opportunity Fire shots (and only Opportunity Fire shots) can occur during the Supply Phase.

Suppressed! If a unit receives a Suppressed marker while moving, don't apply the -2 movement penalty until the target finishes moving.

Heavy Vehicle Damage! Heavy vehicles stop moving when receiving a #2 or #3-4 damage marker!

Movement Resolution! Opportunity Fire may occur after any square of the enemy's movement. The Opportunity Fire unit can't shoot the target in its starting square unless the target receives an order for zero movement.

WINNING THE BATTLE

Many scenarios have unique victory conditions, such as capturing a strategic position or rescuing a unit. Other scenarios, including player-created scenarios, check for victory points.

The Immutable Rule of Scenarios:
Teams cannot win on the first turn!

Check Victory Conditions During the Supply Phase!
When a team captures an objective or scores victory points, it doesn't immediately win the battle. The unit must hold its positions until the Victory Conditions step of the Supply Phase!

Destroyed Units, Breaking Points, and Victory Points

If a recruitment option provides units, it also shows a number of red boxes. Place a destroyed unit below its option.

When the option's destroyed units ties or exceeds its red boxes, then the option reaches its breaking point. Flip the option over, and the opponent scores victory points as shown on the other side.

(See Top of next column for caption)

1.- The 60MM Mortar unit is destroyed. This breaks its unit option. The option flips, and the opponent scores 1 VP!
2.- A .30 Cal unit and a Fire Team are destroyed. The recruitment tile and the .30 Cal Squad both provide a Fire Team, so these units must be placed below the option. This flips the .30 Cal Squad, scores 5 VP!
3.- Now that the .30 Cal Squad is broken, it no longer supports the bonus order star. The team loses an order token!
4.- A Support Team unit is destroyed, which appears on an option and a tile. It must be placed below the option.
4.- A second Fire Team is destroyed. Since the option already has a destroyed Fire Team, this unit counts toward the tile's breaking point.

Breaking Recruitment Tiles: Recruitment tiles also have breaking points and flip when their units are destroyed. Flipping a tile doesn't flip its recruitment options or change anything else on the tile, other than providing victory points.

Multiple Copies of Units: If a destroyed unit appears on both a recruitment tile and an option, place the unit below the option.

- If a destroyed unit appears on multiple recruitment options, place the unit below the option of its owner's choice.

Bonus Order Stars: If a tile's option slot provides a bonus option star, that star is lost when the option flips. Its team loses an order token during the next Supply Phase.

Destroyed Vehicles: Destroyed vehicles remain on the map as wrecks but still count toward breaking points.

Only unit recruitment options have breaking points! Opponents can't score victory points from equipment, trait, or order options.

You can place destroyed units below a broken option!

Disarray

A team falls into disarray when it cannot give orders during the Activation Phase. This team immediately loses the battle (unless the scenario states otherwise).

A team cannot give orders if it has no order tokens (or special order tokens), or if it has no surviving units. An autonomous unit can receive an order without an order token.

Objectives

Place objectives at an intersection between four squares. Depending on the scenario, a controlled objective provides victory points or advances the scenario.

Control: A team controls an objective if it is the only team with a unit adjacent to it. Check for control during the Supply Phase.

Check Control Every Turn: A team loses control during any Supply Phase that it is not the only team adjacent to the objective.

Primary and Secondary Objectives: Primary Objectives (red) usually represent a scenario's main objective. Secondary Objectives (yellow) may represent strategic positions or checkpoints.

Team-Specific Objectives: Any team can take control of a common objective. Only one team can take control of a team-specific objective—either the Americans or the Germans . Enemy units can still prevent the opponent from taking control by placing a unit adjacent to the objective.

Building Objectives: An objective inside of a structure is controlled when only one team has a unit in the structure.

DICE MITIGATION

Although mitigating the effect of "hot" or "cold" dice is not necessarily a realism issue, it can certainly lead to more probable results and fewer strange outcomes. This variant uses a Roll Tracker (see below) to help correct for improbability.

Start the roll Tracker with a counter in the blank middle space. Whenever a die is rolled in the game, and the result of that roll is actually applied, the counter on the Roll Tracker moves as follows:

Allied player rolls a 6 = move two Tracker spaces to the right.
Allied player rolls a 5 = move one Tracker space to the right.
Allied player rolls a 2 = move one tracker space to the left.
Allied player rolls a 1 = move two Tracker spaces to the left.

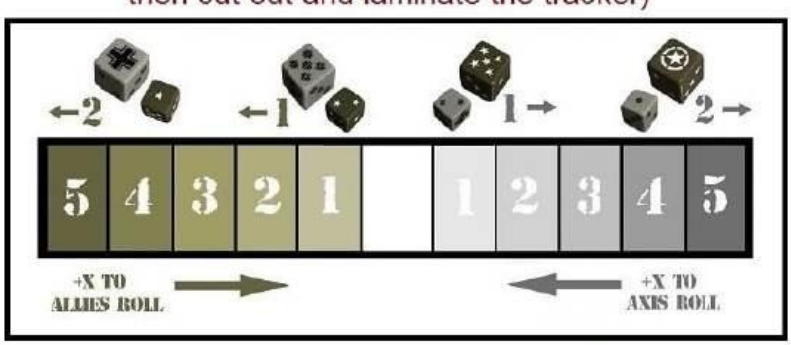

Axis player rolls a 6 = move two Tracker spaces to the left.
Axis player rolls a 5 = move one Tracker space to the left.
Axis player rolls a 2 = move one tracker space to the right.
Axis player rolls a 1 = move two Tracker spaces to the right.

Note: a roll is "actually applied" only if its result is used to determine an outcome (i.e., if the die is rerolled through "Second Chance," or if it is an unused die in an assault roll, it is not "actually applied."

If the Roll Tracker is left of center, the Allies have been unlucky. At any time the Allied player can move the counter X spaces to the right to boost one of his die rolls by +X. However, he cannot boost a die roll above 6, and he cannot move the counter to the right of the blank center space.

If the Roll Tracker is right of center, the Axis have been unlucky. At any time the Axis player can move the counter X spaces to the left to boost one of his die rolls by +X. However, he cannot boost a die roll above 6, and he cannot move the counter to the left of the blank center space.

Roll Tracker (print this page twice, then cut out and laminate the tracker)

REMOVED TILES

Some units or Equipment/Trait tiles are unrealistic to a point that they really do not work in a "Realism Variant." This is not a condemnation of these tiles in the base game - simply a recommendation to remove them when playing this variant.

-Anyone with a Longbow or Bagpipe. Zany weapons and silly equipment are a lot of fun in the base game, but they're not going to work in a realism theme. Yes, I know Mad Jack was a real-life historical figure. But that's not how bows and bagpipes work in real life.

-All heroes except snipers and spotters. The heroes units are obviously fun and add a lot to the base game, but they simply do not work realistically for a Realism Variant. Snipers and Spotters are the exception. Your opinion may differ, but these are the only heroes who operate fairly realistically. Most vehicle-bound heroes are probably realistic enough to use, although I find Oddball fairly unrealistic. What matters is what you find realistic - remove or keep whichever fit the realism theme for you. I actually removed all heroes and made standard snipers and spotters.

-All traits that cannot be realistically explained. I can't explain why a unit with knives or shovels has a better assault bonus but can only use its knife three times. I can't explain why a unit with more fuel can make his tank move faster three times, or why a unit with camo can apply its camo three times during a battle to make itself harder to hit, but then runs out of camo.

Again, there is nothing wrong with these tiles - they are fun and balanced for the core game, but they do not work in a realism variant.

REMOVED: Ammo, Ammo Belt, Blitzkrieg, Camo, D-Day Cricket, Directives, Dropped, Fuel, Guardian, Heroic, Horn of Plenty, Knife, Nazi Basterds, Shovel Sprinter, Trigger Happy, Walking Fire.

MODIFIED: MG Nest. This is recruited as if it were an ordinary unit. It must be placed in the deployment zone and then cannot be moved. Obviously, this unit will likely only be useful in defensive scenarios, but this modification makes the nest much more realistic, as it would be a carefully prepared position.

SPECIAL ABILITIES

Flip! Units with a Flip ability may deploy with either side up. The unit may flip at the beginning or end of any movement, including Supply Phase movement or movement of zero squares. You cannot intentionally flip a unit more than once per movement!

Ambush
Ambush units have a concealed side and a visible side. A concealed unit cannot be targeted or hit.

Spot: A concealed unit is immediately spotted—flipped to its visible side—when within Clear LoS of an enemy infantry or light vehicle. Check for a spot after each square of any unit's movement.

Hiding in Terrain: Only enemies within 2 squares can spot a concealed unit inside a terrain element, such as a hedgerow or building. A unit adjacent to a building's opening spots any units in the room adjacent to that opening.

- This Fire Group has Clear LoS to two concealed enemy units. The units are hiding in terrain, but the Fire Group is within 2 squares.
- The Fire Group doesn't have Clear LoS to the other concealed units.

Firing while Concealed: A concealed unit may fire or make another attack action. This spots the unit.

Spotted while Moving: Most units have 3 movement when concealed and more movement when visible. If spotted while moving, the unit finishes moving with its concealed value.

- Once a concealed unit is spotted, it cannot flip again during that movement!
- When spotted, an Ambush unit may be immediately targeted by Opportunity Fire!
- Heavy vehicles cannot spot concealed units!
- Concealed units do not block LoS!
Ambush and Assault! A concealed unit may move to assault an enemy, or it may be assaulted by an enemy. In either case, don't flip the Ambush unit until it's spotted!

Assault
This unit can assault. Add the icon's number (if any) to all of the unit's assault rolls. See p.12.

Autonomous
This unit can activate without an order token. The unit may activate at any time during the Activation Phase, but it cannot interrupt another unit's activation.

Destruction
These units can damage structures with a firing order. See *Destruction* on p.14.

Fire on the Move
This unit can move and fire with a single order.

Before Movement: The unit may fire just before any square of its movement.

Icon Penalty: If the icon is numbered, subtract this number from the unit's combat bonuses.

Heavy Vehicles! Most heavy vehicles may only fire a secondary weapon on the move!

With Assault! A unit could fire on the move while moving to launch an assault!

Frightening Shot
When Otto's tank fires a shot with no results (no hits, no Suppressed markers placed, or other effects), place a Suppressed marker on the target.

Indirect Fire
This unit may fire a blast over obstacles. See *Indirect Fire* on p.13.

Limited Range
This unit cannot fire at a target beyond the range shown.

Limited Blast Range: Dotted lines indicate the number of intersections away that a unit can place a blast pattern.

Machine Gunner
This unit may fire a special shot that sacrifices accuracy for the chance to hit multiple targets.

1. Choose any number of targets. Each target must be:
- The same type (all infantry, light vehicles, or heavy vehicles)
- Within 2 squares of any other chosen target
- In Clear LoS or Obscured LoS

2. Split the attacker's combat bonus amongst the targets, assigning at least +1 to each target. For example, a unit with +4 combat bonus vs. infantry could target four enemy infantry with a +1 bonus against each target.

3. Roll a separate attack for each target, adding the assigned combat bonus for that target.

This MG 42 divides its +4 combat bonus vs. infantry into a +1 bonus, +1 bonus, and +2 bonus for three targets.

Machine Gunner Penalties: Before choosing targets, reduce the combat bonus for any Fire on the Move penalties or Suppressed markers. Apply other penalties to every target after dividing the combat bonus amongst targets.

Machine Gunner + Suppressive Fire: Distribute combat bonuses to targets, then double each bonus for Suppressive Fire.

Opportunity Fire
This unit may fire during an enemy's movement. See *Opportunity Fire* on p.14.

Flip: Infantry with Opportunity Fire usually have a packed side (unslashed icon) and a ready side (slashed icon). These units may only use Opportunity Fire with the ready side up.

Packed Ready

Order
This unit provides one ★ or two ★ order tokens. If the unit is destroyed, its team loses order tokens during the Supply Phase.

Perforating
When this unit hits a heavy vehicle, add +1 to the damage roll (not the attack roll).

Personal Order
This unit provides an order token, but the unit must receive an order token each turn.

Personal Order units could receive a special order token, but not a bluff token!

Positive Waves
When Oddball's tank is hit, the attacker rolls two dice for the damage roll, and the tank's owner chooses either result.

Scout
During setup, you may deploy this unit outside of your deployment zone, up to a number of squares away from the zone equal to the icon's number.

No Easy Victories: You may not deploy the unit adjacent to an objective or inside of a terrain overlay with an objective.

Combine with Ambush: A unit with Scout and Ambush could deploy outside of the deployment zone with the concealed side up!

Combine with Transport: If a vehicle with Scout and Transport deploys outside of the deployment zone, you cannot deploy any units inside of it that do not have Scout.

Sniper
This unit may replace any shot with a sniper shot.
Choose a target infantry unit and roll a die. Suppressed markers and obstacles modify this roll.
Cannot be used at Point Blank range or Close Range.

1 or less: No effect.
2-3: Place a Suppressed marker on the target.
4-5: The target is hit.
6: The target is hit. Place a Suppressed marker on the target if it survives. If the target is a Solo Infantry unit, the unit is instantly eliminated, regardless of its current health/damage level.

Note: When firing on a stack, the Sniper ability allows its user to select which unit from the stack it is targetting.

Suppressive Fire
This unit may replace any shot with a special shot that disrupts and distracts enemies.

1. Before rolling dice, double all bonuses to the attack roll.

2. On a hit, the target is not damaged or destroyed. Instead, place a Suppressed marker on the target.

3. If the hit is a kill shot (double the target's defense or more), place a second Suppressed marker on the target.

Suppressive Fire Penalties: Apply Fire on the Move penalties and Suppressed markers before doubling bonuses.

Suppressed markers reduce a unit's attack rolls and movement by -2! See Suppressed Markers on p.11!

Urban Fighter
When this unit assaults into a walled structure from outside of a walled structure, the target does not receive any terrain bonus.

Transport
A Transport vehicle may carry infantry units. Units inside the Transport move whenever the Transport moves.

Entering and Exiting: At the end of an infantry's movement, it may enter an adjacent Transport—this requires no movement.

- Remove the infantry from the map while transported.
- At the beginning of an infantry's movement, it may exit a Transport for no movement.
- An immobilized unit (with zero movement) cannot enter or exit a Transport.

Orders: Transported infantry may receive order tokens, fire shots from the Transport, and move during the Supply Phase.

Protected: Transported units cannot be hit by shots or blasts.

Capacity: The icon's number is the vehicle's maximum capacity.

- Heroes (dark stripes), officers (yellow outline), and infantry showing occupy 1 capacity.
- All other infantry occupy 2 capacity.

Heavy Weapons: Heavy weapons (red outline) cannot fire while transported.

- Heavy weapons with Fire on the Move may fire while transported. Give the unit an order token and a firing order—the unit does not fire during the Transport's movement. This attack suffers no Fire on the Move penalty.

Guns: A Transport may not carry more than one gun unit (a heavy weapon that is slightly larger than one square, such as Pak 40).

Destroyed: When a Transport is destroyed, transported units must redeploy.

1. Redeploy each transported unit to a square adjacent to the wreck. This square must be empty and outside of any enemy's ZoC.
2. Units with Flip must redeploy with the packed/visible side up (unslashed).
3. Place a Suppressed marker on each redeployed unit.
4. Destroy any units that cannot redeploy.

Assault: A transported unit may launch an assault directly from the Transport. See *Assault* on p.12.

Tripod
These units have a ready side and a packed side.

With the ready side up, these units usually have little movement but gain better combat bonuses or special abilities.

RECRUITMENT OPTIONS

Recruitment options may provide units, equipment tokens, or other bonuses to an army.

Equipment

Equipment options (names in red text) improve an army's units.

Same Tile Only: Equipment options improve units from the same recruitment tile, including units from options on that tile.

Heroes: Heroes may use the equipment of any recruitment tile. (They can't use traits!)

Field Command: All units on a team may use the equipment options on a field command tile.

Equipment Tokens: A numbered option (x2, x3) provides single-use option tokens. Discard a token to gain its one-time benefit.

One Order Per Token: Equipment token bonuses affect a single shot or movement.

Play Token Before Rolling Dice: For tokens that affect an attack roll or another roll, play the token before the roll. Discard the token even if the roll fails.

Culin Hedgerow Cutter (x2)
Discard a token to allow a heavy vehicle to move into an adjacent hedgerow square. Place the token in that square—it becomes a terrain overlay that clears the way for movement by any unit.

Gears (x 5)
Because *Ammo* and *Ammo Belt* are removed from the realism variant, only *Rifle Grenade*, *Sticky Bomb*, and 2 *Grenades* remain as options (4 total) to fill the 5 choices of gear. For the last option, select one more Grenade, Rifle grenade, or Sticky Bomb from the extra US tokens.

Grenade (x3)
Discard a token to replace an infantry's shot with a blast attack. See *Grenades* on p.13.

Panzerfaust (x3)
Discard a token to replace an infantry's shot with a special attack. This attack is not a shot.

- Use the token's combat bonuses instead of the unit's bonus.
- This attack has Limited Range 4 and Destruction 2.

Rifle Grenade (x3)
Discard a token to replace an infantry's shot with a blast attack. See *Rifle Grenades* on p.14.

Veteran (x3)—Trait
Discard a token to reroll any dice rolled by a unit on this recruitment tile.

- You must keep the new roll, though you may discard additional tokens to roll those dice again.
- Each token rerolls all dice of the roll, such as rolling two dice for an assault.

Orders

Options with yellow text are orders. These options affect the entire army.

Airstrike (+1)
At setup, shuffle an Airstrike card into your deck.

Airstrikes! When you play an Airstrike card, your opponent rolls a die. If the roll ties or exceeds the Airstrike card's AAA number, then the aircraft is shot down—discard the card without effect!

Bluff
Provides an additional Bluff token.

A team can have no more than 2 bluff tokens!

Concealed (x2)
Allows you to conceal any infantry unit, as with the Ambush special ability. See p.16.

1. During the Supply Phase, choose a unit.
2. At the beginning or end of that unit's movement, remove it from the map and place it on the large A or B token.

3. Place the Concealed A or Concealed B token on the map in the unit's place.

4. When spotted, remove the Concealed token from the map, and place its unit in that square. The unit cannot become concealed again that turn.

5. After picking up a Concealed token, you may reuse it during the next Supply Phase.

Improvisation
Whenever you refill your hand of action cards (during setup or the Supply Phase), draw 1 additional card, then discard 1 card.

MG Nest
Provides the MG Nest unit. This unit deploys normally.

Planning
Provides an order token.

No more than 10 order tokens!

ACTION CARD F.A.Q.

Artillery and Airstrikes: The attacks of these cards may not be modified by equipment tokens.

Dynamic: This card moves an unflipped order token from one unit to another. *You can play this card only on your own units.*

No! & Nein!: A *No!* card can cancel a *Nein!* card, and vice versa. Return the cancelled card to its owner's hand. Resolve any card targeted by a cancelled card.

P47 Thunderbolt: This card has the Howitzer ability, which appears more in HoN's expansions. Treat this ability like an Indirect Fire attack, but do not roll for dispersion.

Second Chance: If a roll uses two dice and keeps the best die, such as an assault roll, this card rerolls both of those dice.

Initiative: The card says "your unit" (singular) can act before your opponent's "unit" (again, singular). In other words, play this card on a turn when your opponent has Initiative and is about to activate his unit with Order #X. Play this card to activate your unit with Order #X before his instead. The most obvious use for this card is to activate *your* first order before your opponent can activate *his* first order, thus giving you the first move of the turn.

I GO / U GO VARIANT

The I GO-U GO Variant is designed to make *Heroes of Normandie* almost entirely into a traditional hex-and-counter game, while retaining the aspects of *Heroes of Normandie* that make it such an elegant system (clear terrain iconography, no firing tables, etc).

This variant uses ASL, Conflict of Heroes, and Retro rules as an influence. It removes much of the dynamism and surprise from *Heroes of Normandie* and replaces it with a more traditional tactical battle.

The I GO-U GO Variant uses the Realism Variant rules except for the following changes:

1. **Turn Phases are different (one side moves all units, interrupted only by opportunity fire, then the other side moves all units)**
2. **Initiative can be stolen by the side with higher Leadership.**
3. **All cards except Artillery and Airstrike are set aside.**

GAME FLOW

Setup:

The game is set up as normal - drafting armies, etc. However, during setup, no cards are dealt except for any Artillery and Airstrike Cards drafted. Each player takes his Artillery and Airstrike Cards, shuffles them, and lays them out face down and side by side in front of him. Determining first-turn Initiative: the player with the most Leadership (see Initiative Phase below) elects which player starts with Initiative. The player without Initiative starts with the Reroll Token (see p. 20).

Initiative Phase:

Each player counts his Order stars (not including special orders, autonomous units, etc.). This is his Leadership value. Whichever player has Initiative that turn compares his Leadership value to his opponent's. If his Leadership value is lower, he must roll a die to defend the more coordinated enemy from stealing the Initiative. If the die result plus the Leadership value is greater than his opponent's Leadership value, he retains the Initiative. If not, his opponent steals the Initiative, but the Initiative Token does not flip till the Supply Phase.

Combat Phase, Player 1:

-Player 1 sets out all his Order tokens. One at a time, he places Order tokens on units to Order them. These units can either fire, assault, or move. He can also call in Artillery or Airstrikes at any time *before, between, or after* Orders (not during an Order until it is resolved).

> Note: Autonomous units from either side can act regardless who has the Initiative. If Player 2 has Autonomous Units, he can order them even before Player 1 begins to order his units (but Player 1's Autonomous units can move before Player 2's).

-Player 2 can respond to Player 1's orders with Opportunity Fire by placing his Order tokens on units he wishes to use for this purpose.

-When Player 1 has used all his Order Tokens, or when he passes, Player 2's Combat Phase begins.

Movement Phase, Player 1:

-Player 1 can move any units that were not ordered during the Combat Phase, placing activated tokens as he proceeds. These units cannot fire, but can be interrupted by Opportunity Fire from Player 2.

-After all Player 1's units have been Ordered, or Player 1 passes, Player 2's turn begins.

Combat Phase, Player 2:

-Player 2 chooses from any units remaining (without Order Tokens on them) to Order, issuing Order Tokens to them as he proceeds. He can also call Artillery or Airstrikes between orders.

-Player 1 can interrupt with any remaining, unactivated Autonomous units or with Opportunity Fire from any unactivated units, if he still has unused Order Tokens (or unactivated Autonomous units, which do not require an Order token to act, even in the case of Opportunity Fire.)

-When Player 2 has no remaining Order Tokens or passes, the Combat Phase ends.

Movement Phase, Player 2:

-Player 2 can move any remaining units that were not ordered during the Combat Phase, placing activated tokens on them. These units cannot fire, but can be interrupted by Opportunity Fire from Player 1.

-After all Player 2's units have been Ordered, or Player 2 passes, his phase ends.

Supply Phase:

-Each unit removes one Suppression token.

-Any players with Artillery or Airstrike cards in front of them rolls one die. If the result plus the number of cards remaining is greater than 6, draw a card at random. It can be used during the next turn.

-Flip the Initiative Token and move it down to the next turn.

End of Turn.

Notes:

-Artillery and Airstrikes are instantaneous, and thus once an Artillery or Airstrike order is made, it cannot be interrupted by an order to an autonomous unit of the enemy.

-There is no limit to the number of Artillery or Airstrikes that can be used in one turn, or even subsequently.

Optional Rule: Combined Combat and Movement Phases.

Some players may want to simplify things by combining the Combat Phase and the Movement Phase. In that variant, Player 1 gets to order all his units, and each unit can fire or move, regardless of the amount of Fire Order Tokens, then Player 2 gets to do the same. In that variant, the Fire Order Tokens are used only to determine initiative and have no bearing on giving orders, since each Player can Order all his units each turn, with no restrictions as to how many can fire versus move.

OPPORTUNITY FIRE

During the enemy's turn, an unactivated units may take Opportunity Fire shots.

Triggering Opportunity Fire

Opportunity Fire works exactly the same as in the Realism Variant, except that a unit.

Note: If you are using the ruleset where all units can be ordered each turn (and thus are not using Order tokens), the Opportunity Fire special ability is useless, because all units can take Opportunity Fire shots, even without an Order. In that case, the Opportinity Fire ability gives a +1 bonus to Opportunity Fire shots. This operates in the same manner as a Close Range/Point Blank bonus (i.e. does not apply to Sniper shots, building damage/heavy vehicle damage type rolls, or dispersion rolls).

AUTONOMOUS UNITS

Autonomous units are special units that can be Ordered during the other player's turn, and which do not require use of an Ordered token to Activate. The player without Initiative can even move his Autonomous units during the turn of the player with Initiative, and Autonomous units can use Opportunity Fire as long as it has not been activated, even if no Order tokens are left.

Notes on Autonomous Units

-If a player elects to call in artillery or an airstrike, the bombardment is resolved before the enemy can move his Autonomous units.

-Autonomous units belonging to the player whose turn it is can act before allowing the other player's Autonomous units to act.

-Once the player whose turn it is begins moving his regular units, the other player can order his Autonomous unit only <u>between</u> orders from the other player. Thus if the first player orders a regular unit to fire upon an Autonomous unit, the shot must be resolved before the Autonomous unit can be ordered.

REROLL TOKEN

Because there are no "Second Chance" cards available, this variant incorporates a reroll token that can be passed back and forth. The player who starts turn 1 without Initiative starts with the reroll token. At any time, he can pass the token to the other player to reroll one of his (not the opponent's) die results (any results rerolled in this manner are not applied to move the Roll Tracker counter - see p.16).

The reroll token can pass back and forth between the two players any number of times during a turn.

A face up "Second Chance" card is an easy, intuitive "Reroll Token." A printable "Second Chance" Reroll Token is also included at the end of this manual.

EXPLANATION OF RULE CHANGES

Changing to an I Go - U Go ruleset required several deep changes to the game mechanics. First and foremost, I could not find any way to make the cards work in this variant. There are far too many cards that deal with Order tokens, Opportunity Fire, etc., and these all become useless when every unit has the ability to take Opportunity Fire, and Order tokens are placed only to show a unit has been Ordered, rather than to plan in advance which units will be allowed to move.

For instance, if Order tokens are not placed before the Activation Phase, there is no use for Relay, Dynamic, Confusion, Communications Scrambled, etc. Many other cards simply did not fit the realism theme, and I ended up with only a handful of cards that could be used.

This creates difficulty because if there is no deck, how are Artillery and Airstrikes obtained? If they are all available from the start, they will be over-powered and under-priced. Thus, the game needs a way of gradually and randomly acquiring these cards, as if drawing them from a deck. The dice-rolling mechanism for obtaining your artillery and airstrikes roughly approximates the card-drawing mechanism from the base game. In effect, the more artillery cards are in your "deck," the more likely you are to "draw" them (a lower die result is required). Of course this mechanism is not a perfect proxy, but it preserves what is important about artillery and airstrikes (you never know when you will get them, but the more you purchase during army-building, the more likely you are to get them early and often).

Another complication arises if you are using the variant that does not use Order tokens at all (where all units can move/fire each turn). In that case, what is the function of units with yellow stars?

To solve this problem, I added the Initiative-stealing function of Order Stars. This way, there is still a thematic advantage to having more stars than your enemy. Your side has more Leadership and is better coordinated, and thus can steal the Initiative.

This has the secondary benefit of adding some uncertainty and "fog of war" to the game. Since there is no deck and thus no "Initiative" card to play in order to unexpectedly grab the initiative, this mechanism makes it uncertain who will be going first during any given turn (although the player with more Leadership never has to worry).
