SPECIAL ABILITIES

CHANGES OF STATE

In order to activate or deactivate these special abilities, you need to turn the unit over at the beginning or the end of a *movement action*.

Alert (p.39)
When active, your unit has the Opportunistic Fire special ability.

Ambush (p.39)
When concealed (*active side* up), the unit follows these rules:
- A concealed unit may not be the target of a *firing action*.
- A concealed unit ignores explosion templates.
- A concealed unit does not block *LoS*.
- A concealed unit cannot be engaged in an assault. Instead, if it is the target of an assault, it is turned over.
- A concealed unit must first turn over onto its *inactive side* if it wants to engage another unit in an assault.
- A concealed unit that takes a *firing action* turns over onto its *inactive side*. This is a *forced Move*.

In order to spot a concealed unit, you need a clear *LoS*.
If the unit is in a *terrain element*, you need a clear *LoS* and be within **2** squares of the unit.
When you spot a concealed unit, turn it over onto its *inactive side*. This is a *forced move*.
A concealed unit can only be spotted or turned over once per *movement action*.
A concealed unit that was spotted during its *movement action* keeps using the *movement value* of its 'in-ambush' side until the end of its activation.
Two concealed units can spot each other.
Heavy vehicles cannot spot concealed units.

Crew (p.39)
The unit then adds its special abilities to those of the vehicle. The unit does not count against the carrying capacity of the vehicle and vehicles that do not have this special ability can only carry one Crew unit.

Medic (p.40)
In order to heal a unit:
- the unit must be in the Medic's *ZoC*;
- the Medic must be on its *active side*;

The unit can be healed in the Activation or Supply Phase instead of taking a *firing action* or a *movement action*.
Once healed, remove the Healing marker from the unit and turn the Medic over to its *inactive side*.
The Medic will have to be turned over back to its *active side* in order to assign the Healing marker again.

Tripod (p.40)
When activated, your unit's properties change.

MOVEMENT SPECIAL ABILITIES

Amphibious (p.40) (Special Movement)
The unit may move into Water areas that have the symbol.
If the Amphibious symbol has a red outline, the unit is exclusively aquatic, which means the unit can only move in Water squares.

Climber (p.40)
This unit can move into squares that have the Wall symbol.

These squares are considered Difficult Passages for it, so the unit must stop each time it enters a square.

All-terrain (**(p.40)** Special Movement)
A unit that has this special ability can move through Difficult Passages without having to stop.

Swimmer (p.40)
As soon as one of these units enters a Water square, it receives a *Suppressed marker*, and immediately apply the *Suppressed marker* penalty. The unit must keep this *Suppressed marker* as long as it stays in a Water square and will discard it at the end of the Supply Phase on the turn it gets out of the water.

Urban Fighter (p.40)
Once and only once per *movement action*, the unit may enter or exit a building through an opening identified by a white arrow. This special ability also enables you to exit buildings during a *forced move* following a lost assault.

FIRING SPECIAL ABILITIES

Artillery Spotter (p.40)
If you have at least one artillery spotter with a clear *LoS* to the *interspace* targeted by an Indirect Fire *template*, reduce the scattering distance by **1** *interspace*.

Demolition (p.40)
This unit adds **+1** to all its Destruction rolls.

Destruction (p.40)
Units that have this special ability can destroy structures.

Distracting Fire (p.41) Alternate Firing Action
Roll a die. If the result is equal to or higher than the value printed on the ability's symbol, put a *Suppressed marker* on the target.

Double Fire (p.41)
When this unit is activated, it may take two *firing actions* against two different targets. It may not fire twice at the same target. Make a separate roll against each target.

Dual Weapon (p.41)
During a *firing action*, roll two dice and keep the best result.

Fire on the Move (p.41)
The unit may take a *firing action* during its *movement action*. Fire on the Move is resolved after entering a square or before leaving a square. The penalty indicated on the ability's symbol is subtracted from the unit's *combat value* (and not from the final result of the roll).

light small template

heavy big template

Flamethrower (p.41) Alternate Firing Action
A unit that has a flamethrower uses a special *template*.

Frightening Shot (p.42)
If your *firing action* has failed (no *Hit*, no *Suppressed marker*, no *damage marker*), you may put a *Suppressed marker* on your target.

Howitzer (p.42) Alternate Firing Action
When using this special ability, you must target an *interspace*.
There is neither a range limit nor an associated penalty.
You need to have a clear or obscured *LoS* to the target *interspace*.
Take the explosion *template* that's the same colour as the ability's symbol and put it on the *interspace*.

Indirect Fire (p.42) Alternate Firing Action
This special ability works like Howitzer but you can use Indirect Fire instead if you have no clear *LoS* to the target *interspace*.
Otherwise, you can use direct fire.
Indirect Fire does not necessarily hit the target *interspace* and may scatter.

Hawk-Eyed (p.42)
When this unit fires, it ignores penalties for long range fire.

Limited range (p.42)
The unit may not fire at a target that is farther than the number of indicated squares/interspaces.

Machine Gunner (p.43)
During a *firing action*, a unit that has this ability can split its *combat value* (modified by any bonuses or penalties) between several targets, provided it grants at least a **+1** bonus to each target (one roll must be made for each target).

Munitions Carrier (p.43)
This unit grants a **+1** bonus to all firing actions taken by allied infantry units in its *ZoC*. This bonus does not apply to alternate firing actions. The unit does not receive its own bonus.

Opportunistic Fire (p.43)
During and only during the *Activation Phase*, a non-activated unit can take a *firing action* against an enemy unit after that enemy unit's *firing action*. It can also take this *firing action* at any time during the *movement action* of an enemy unit.

Paint Shell Rounds (p.43)
When this vehicle takes a *firing action* with its *primary weapon* and the die roll is **1**, the crew made a mistake and loaded a paint shell. No *damage* is dealt, but you put **2** *Suppressed markers* on the target.

Piercing (p.43) (formerly Perforating)
Add **1** to the die roll when you locate *damage* dealt to a heavy vehicle.

Sniper (p.43) Alternate Firing Action
A sniper can only target infantry units. Its player rolls a die, modified by *Suppressed markers* and *obstacles*.

1: **No effect.**
2-3: **Put a Suppressed marker on the target.**
4-5: **Deal one *Hit* to the target.**
6: **Deal one *Hit* to the target and give it a *Suppressed marker* if it isn't *Destroyed*.**

Suppressive Fire (p.43)
Normal *firing action* rules apply, but double the unit's *combat value* as well as any and all bonuses it may have. If the result is equal to or higher than the target's *defence value* modified by any defence bonuses, the target receives no *damage* but you give it a *Suppressed marker* instead.

ASSAULT SPECIAL ABILITIES

Assault (p.44)
Only units that have the Assault special ability may engage an enemy infantry unit or vehicle in close combat. In most cases, a vehicle will not have this ability. Units that do not have this special ability can defend against it, but will roll only one die.

Assault on the Move (p.45)
The unit may launch an assault on an enemy unit during the attacking unit's *movement action*. If it loses the assault, its *movement action* ends ; otherwise it may continue its movement. Subtract the penalty printed in the ability's symbol from the unit's *combat value* and not from the final result.

Brutal Assault (p.45)
The unit must launch an assault against all enemy units it covers, even partially, at the end of its *movement action*. Use the value printed on this ability's symbol instead of that from any Assault special ability the unit may have. The assaults are resolved one after the other, with the attacker choosing the order. The unit may not attack a single opponent more than once.

Long Distance Assault (p.45)
The unit can launch an assault from a maximum distance in squares printed on the ability's symbol. The resolution of a long distance assault follows the rules for Assault.ne of them.

Charge (p.46)
When this unit launches an assault, it may make a free attack before resolving the assault.

Pursuit (p.46)
After the unit wins an assault and if it still has enough movement points and no element is forbidding further movement, the unit may make a second assault against the unit that has just retreated.

Terrifying (p.46)
When this unit wins an assault, in addition to inflicting *damage*, it puts **2** *Suppressed markers* on an undestroyed victim.
Even if it loses the assault, whether it is *Destroyed* or not, it still puts **1** *Suppressed marker* on its opponent.
