
HEROES OF
NORMANDIE
SCENARIOS

PRECISIONS

The Immutable Rule of Scenarios:
Players cannot win on the first turn.

Scenario "Victory Conditions and particular information" prevails over the following rules.

Objectives

Each Objective earns you points, or enables you to complete a special condition of the scenario.
In order to control an objective, you must be the only player to have a unit (it doesn't matter which unit, unless specified by the scenario) in one of the 4 adjacent spaces, or in the terrain overlay (building, defensive position...) at the end of a Supply phase.
If your opponent is also present there, the objective remains neutral.

Primary Objectives
If the marker bears the symbol of an army, it signifies that only a unit of this army can control the objective and receive its benefits. However, the other army's units can can prevent control of the objective by simply being present in one of the 4 adjacent spaces, or in the terrain overlay.
Once controlled, leave this marker on the board and turn it over to its "controlled" side. This indicates that the objective has been taken, but it can still be retaken by the enemy.

Secondary Objectives
If the marker bears the symbol of an army, it signifies that only a unit of this army can control the objective and receive its benefits. However, the other army's units can can prevent control of the objective by simply being present in one of the **4** adjacent spaces, or in the terrain overlay. When a player takes control of a secondary objective, he sets it aside, near his recruitment tiles.
According to the scenario, this player has either scored points or completed a step of the scenario.

Bonus Tactics

Randomly choose the number indicated by the scenario from among the available bonus tactics. Try not to look at any of them when you place them or set them aside.
In order to control a bonus tactics, you must be the only player to have a unit in one of the **4** adjacent spaces, or in the decorative element (building, defensive position...) at the end of a Supply phase.
Depending on the type of bonus tactics tile you gain the corresponding bonus.

Permanent (X1)
+1 card each turn

Permanent (X2)
+1 order

Expendable (X1)
Discard it to have a Special Order token for this turn.
You cannot have more than **2** Special Order token eacth turn.

Expendable (X1)
Discard it to replenish your hand of cards.

Expendable (X1)
Discard it to keep the initiative this turn.
Your opponent will have the initiative on the next turn.

Markers and Turn Counter

The special markers are placed on the turn counter. They serve to remind you on which turn an event should occur, or a particular condition must be met.

The initiative marker indicates which player has initiative. It flips over each turn, moving one space down as it does so, thus serving to count the turns of the game.

Event common to both armies.

Event specific to the german army.

Event specific to the american army.

This marker indicates the end of the game. It must be placed according to the turn number indicated in the scenario.

Action Cards

Certain scenarios tell you which cards to remove from your deck.
If you draw a card you cannot use, you may discard it and immediately draw a replacement.
This rule does not apply if at some point in the game you could have used it.
For example, the card Surprise allows you to enter/leave a building. If there are no buildings in this scenario, you can't use the card, so you can discard and replace it.
On the other hand, if the scenario had a building, but it has been destroyed, you could have used it at some point, and thus you cannot discard it for a replacement.

Once you master the game, we suggest that you build your deck yourself.
You must have a minimum of **40** cards in it. Airstrike and Artillery cards do not count toward this number.
Airstrike and Artillery cards do not count towards this number, if you include them in your deck (by having purchased the corresponding order) you still must select a minimum of 40 other cards.

GODSEND

Terrain tiles
C1-B, C2-B

A small reconnaissance unit from the US 4th infantry division is walking through the Normandy countryside. At the edge of a grove, William, a guy from Brooklyn, thinks he sees movement a little farther ahead. A parachute, supporting a lifeless spy's body, descends gently. He probably has documents of great importance on him!
Wilhelm, a guy from Munich, who is driving the Panzerlehr with his buddies, sees the American patrol at that very moment.
Instead of getting together and knocking back a few beers, the two groups prefer to compete for possession of the documents that are likely to be ultra-mega top secret...

Composition of the Armies

Battlefield and Deployment

Each player deploys his units in his respective deployment zone.

Don't forget that units with the Scout ability can be deployed up to 3 spaces from this zone.

Remove the following cards from both decks:

Weak Point, Precision, Panzerfaust, Bogged Down, It Bounced Right Off It, Hit and Run, Ram, Booby Trap (German), Make It or Break It!, Repairs, Surprise, and all the **Artillery** and **Airstrike** cards.

Determine initiative, and place the corresponding marker on space 1 of the turn counter.

Each player draws **4** cards.

Victory Conditions and Particular Information:

At the end of Turn **2**'s Supply phase, the parachute reaches the ground. Roll the die; the documents end up on the interspace designated by the by the Damage marker corresponding to heavy vehicles. Discard the others.

In order to pick up the briefcase, a unit must end its move on one of the spaces adjacent to the interspace where it lies. This movement may be null.
Once it is picked up, the briefcase moves with the unit carrying it.
If its carrier is eliminated, the unit is removed from the game, and the document falls in an adjacent interspace of his choice.

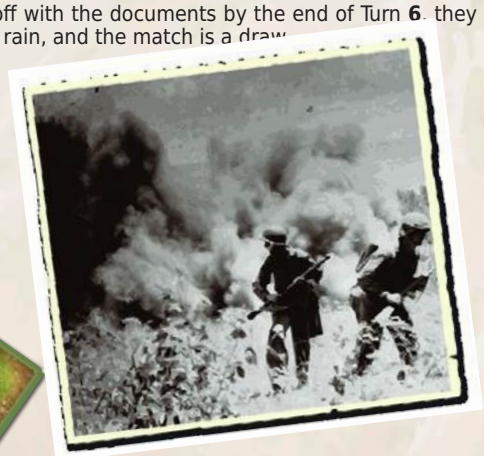

At the beginning of Turn **3**'s Supply phase, each side receives reinforcements in the form of a light vehicle.
The vehicle can move this Supply phase by entering through one of the spaces of that player's deployment zone.
German player:: **SDKFZ 251/1**.
American player: **Halftrack M3A1**.
A vehicle cannot transport the briefcase, but can transport a unit carrying it.

The goal of the mission is to be the first player to pick up the documents from the parachutist's body with one of your infantry units, and then get it off the board through your deployment zone before the end of Turn **6**.

If a player has the briefcase, and his opponent has no more units, he wins.

If no one has made off with the documents by the end of Turn **6**, they are destroyed by the rain, and the match is a draw.

Saving Private Ryan Rex !

Terrain tiles
C2-B, C3-A, C4-A, C5-B

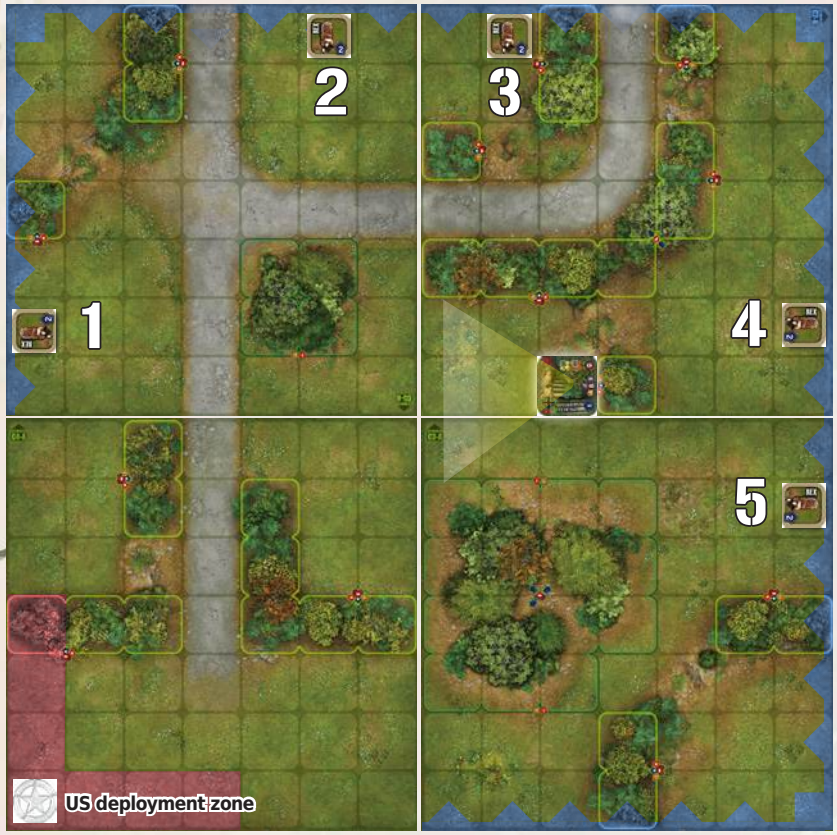

Rex, General Raymond O. Barton's dog, ran away. Clearly the slop in the officers' mess was not to his liking.
A small force of "officially appointed volunteers" has been sent out to retrieve him. The problem is that the damned mutt has wandered toward the German lines...

Composition of the Armies

Battlefield and Deployment

The American player places his units, except the Willys jeep, in the deployment zone.

The German player places his units outside the battlefield.
In order to bring one into play, the German player must give it an order. He can make it enter on any side of boards **C2-B, C3-A, or C5-B.** Units can move to the whole or less of their Movement value (even 0 space).
He cannot bring units into play during the Supply phase.
The **MG Nest** is placed at the start of the game.

Scout Special Ability cannot be used in this scenario.

Remove the following cards from both decks:
Weak Point, Precision, Bogged Down, It Bounced Right Off It, Hit and Run, Ram, Don't stop!, Repairs, Surprise, Booby Trap (German), Geballte Ladung (German), Panzerfaust (US) and all the **Artillery** and **Airstrike** cards.

The American player has the initiative.
Thus he deploys first.

Each player draws **4** cards.

Victory Conditions and Particular Information:

Rex appears at the end of the Supply phase of turn **2**. Roll a die, and refer to the plan above. On a roll of 6, it appears at the end of the next Supply phase. Once placed on the battlefield, it moves immediately.

Movement of Rex
Place a blast pattern on his space, and roll a die in order to determine the direction. On a result of 5 or 6, Rex doesn't move. Then roll the die again, and move Rex that number of spaces in a straight line. His movement is not ended by rough terrain ( ). Rex's movement automatically ends on the last space before leaving the gameboard or entering a space occupied by a German vehicle.

- During the Order phase, the American player can give Rex an Order token if one of his units is within **4** spaces or fewer of him, with a **Clear LoS** on him. During the Activation Phase, Rex then moves toward the closest American unit a number of spaces equal to a die roll.

- If Rex has no Order token, he moves at the start of the Supply phase, in the way described in the preceding paragraph.

- If, at any moment, Rex crosses or ends his movement on an American unit (jeep included), he stays with it, and tags along with the unit, without any order token and without any dice roll. Rex detests the Germans. He can cross or end his movement in a space occupied by a German unit, but he will not follow them.

- If a unit (American or German) within **4** spaces of Rex fires, Rex moves **1d6** spaces as far away from the shot as he can. The player who controls the enemy army of the unit that fired decides the details of his movement. If Rex is attached to an American unit that fires, he will leave it, and moves as explained above.

- Rex does not react to assaults.

You cannot kill Rex.
Not take into account the Movement value on the counter.

The Willys jeep arrives in the American deployment zone in Turn **3**'s Supply phase, and can be activated in Turn **4**.
If Rex gets into the jeep, he stays there even if there is gunfire.

The game ends at the end of the **7**th turn, or as soon as the American player gets Rex out through one of the spaces of his deployment zone.

Match draw: Rex leaves, but the German player has gained at least **10** victory points by inflicting losses to his enemy (see rulebook, page **4**, Victory Conditions).
German Minor Victory: Rex doesn't leave.
German Total Victory: Rex doesn't leave and the German player has gained at least **10** victory points.
American Minor Victory: Rex leaves.
American Total Victory : Rex leaves and the American player has gaines at least 8 victory points.

Plain Carnage

Terrain tiles
C3-A, C4-B

Why has High Command ordered us to hold this minuscule speck way out in the middle of nowhere? No sane person could give an objective response to this question. What's more amazing is that the enemy's HQ gave them the same nonsensical order...
In short, it still comes down to the grunts to find an answer, by iron and fire!

Composition of the Armies

Battlefield and Deployment

Each player deploys his units in his deployment zone.

Also place 1 marker,

Remove the following cards from both decks: Precision, Surprise, Booby Trap (German), and all the **Artillery** and **Airstrike** cards.

Determine initiative and place the corresponding marker on space **1** of the turn counter.

Each player draws **4** cards.

Victory Conditions and Part

The goal for both pla
objective, which is to
one at the end of any
an **infantry** unit in
adjacent to the objective.

Slaughterhouse (5)

Terrain tiles
C1-B, C2-B, C3-A, C6-B

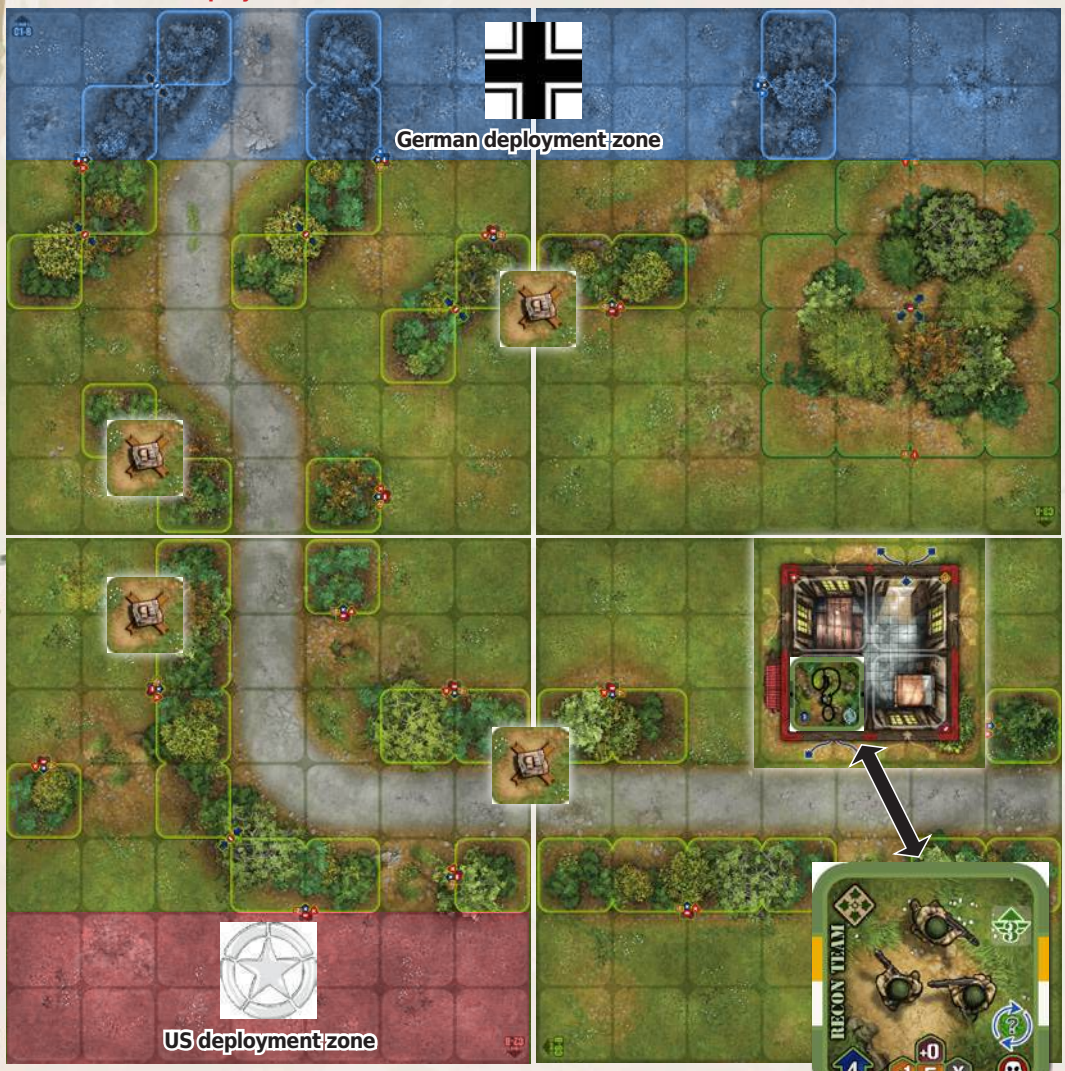

The point member of a patrol of the 4th Inf. Div. just found a house to spend the night in before continuing their trek. As luck would have it, a German unit had exactly the same idea...

Composition of the Armies

Battlefield and Deployment

Each player deploys his units in his deployment zone.

The American player must place his **Recon Team** unit on the "concealed" side in the house, as indicated in the plan.

Without looking, randomly select **4** Bonus tactics markers

Place them on the battlefield.

Remove the cards: Weak Point, Precision, Ram, Panzerfaust, Bogged Down, and all the **Artillery** and **Aviation** cards.

Remove the cards: Hit and Run, It Bounced Right Off It, Repairs, Precision, Ram, Don't stop! and all the **Artillery** and **Airstrike** cards.

The American player has the initiative.
Therefore, he deploys first. Place the corresponding marker on space **1** of the turn counter.

Each player draws **4** cards.

Victory Conditions and Particular Information:

This game lasts **6** turns.

If, at the end of any Supply phase, the German player is the only one to have a unit in the house, he wins the game.

For this scenario, you are not allowed to destroy the house.

If the German player doesn't win before the end of the **sixth** turn, the American player wins the game if he has a unit in the house.

If there are no units in the house at the end of Turn **6**, the match is a draw.

My Heart Goes Boom!

Terrain tiles
C1-B, C2-B, C3-A, C4-A, C5-B, C6-B

The platoon has received orders to blow up a German HQ. They have been equipped with explosives and a detonator. But, during the approach, combat has separated the platoon into two groups. One had to make a detour to the west, while the other had to veer eastward. The dumbest thing about this situation is that one group has the explosives, and the other one has the detonator. We'll have to find the target in order to hook everything up to blow everything up...
Maybe the Germans will just let us do our job?

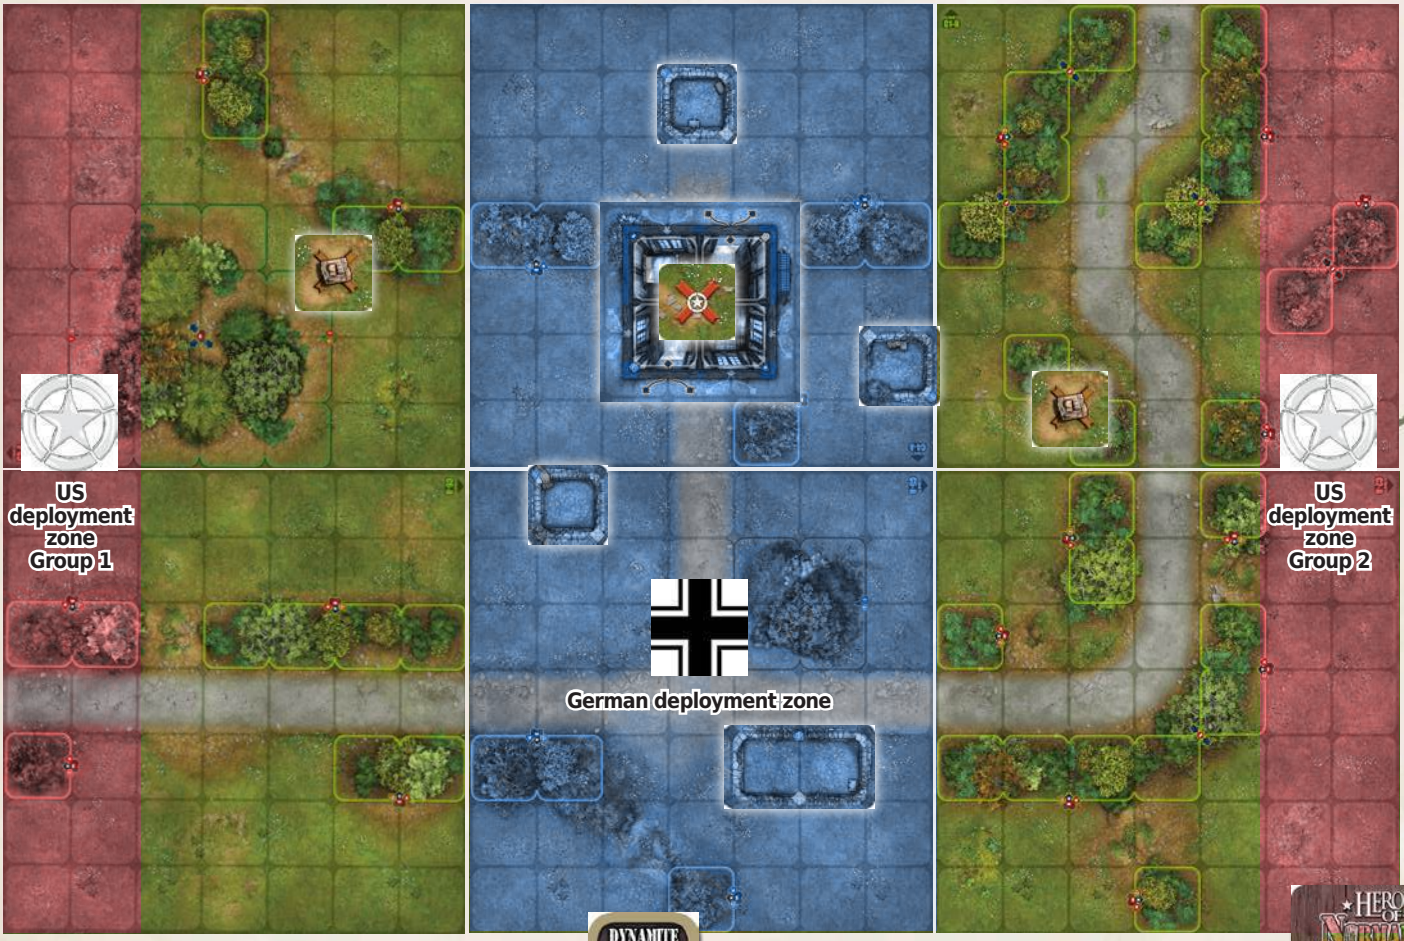

Composition of the Armies

group 1 group 1 group 1 group 2 group 2 group 2

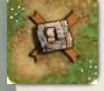

Battlefield and Deployment

The German player deploys his units in the German deployment zone. The American player positions Group 1 to the west, and Group 2 to the east.
One unit of Group 1 carries the explosives, while one unit of Group 2 carries the detonator.
The American player chooses the two units.

Without looking, randomly select **2** Bonus tactics markers, setting aside this marker and place them on the battlefield.

Place the American objective in the house.

For this scenario, you are not allowed to destroy the house.

Remove the **Artillery** and **Airstrike** cards from both decks and Speed set up (US).

The German player has the initiative.
Therefore, he deploys first. Place the corresponding marker on space **1** of the turn counter.
Each player draws **4** cards.

Victory Conditions and Particular Information:

This game lasts **6 turns**.
If the unit carrying one of the items is eliminated, it drops the object it was carrying onto an adjacent interspace of his choice.
In order to reclaim an item, you must stop on one of the spaces adjacent to its interspace.

The American player must, before the end of the sixth turn, bring the explosives and the detonator into the house. If at the end of a Supply phase, both of these items are simultaneously present in the building, and the American player has at least one unit there, a German unit being present or not, he wins the game.
If he does not get there, or the German player eliminates all the enemy infantry units (thus there are no more American units that can transport one item or the other), he is declared the victor.

The Road to Death

Terrain tiles
C1-B, C2-B, C6-B

The advanced guard of the 4th division has encountered a line of Panzer Lehr armored units. So the Allies must get as many tanks as possible there, with utmost urgency. But in order to do this, they must traverse a region invested with Germans. Still, they must get there at any cost! But just passing through isn't enough, they must also push ahead as far as possible in order to place the expected aid where it will be most useful. This won't be easy when the Germans have riddled the hedgerow all along the road with anti-tank units.

Composition of the Armies

groupe 3 groupe 2 groupe 2 groupe 1

groupe 1 groupe 2

Battlefield and Deployment

The German player deploys the first combat group in **Zone 1.**
There he also deploys one position on the space of his choice.
Until Oberst Hauser or the Panzerschreck Group enter play, the German player has only **2** Order tokens.

group 1
Major Hans Gruber, **Fire group** (X2), **MG42** (X1) **and one position.**

The US player places his units outside the battlefield. In order to bring one into play, the US player must give it an order token or wait for the Supply phase. He can make it enter on the side of the board **C6-B.** Units can move to the whole or less of their Movement value (even 0 space).
He brings units into play during the Activation and Supply phase.

Place 5 Bonus tactics markers on the battlefield.
Only the American player can pick them up.
These markers provide their bonus, or serve to score points.
If they are used, discard them; they won't count for the final scoring.

Remove the cards: Weak Point, Precision, Ram, Panzerfaust, Bogged Down, and all the **Artillery** and **Airstrike** cards.

Surprise,

Remove the cards: Hit and Run, Ram, Make It or Break It, It Bounced Right Off It, surprise, Repairs, Precision, Booby Trap, and all the **Artillery** and **Airstrike** cards.

The American player has the initiative.
Place the corresponding marker on space **1** of the turn counter.

Each player draws **4** cards.

Victory Conditions and Particular Information:
The game lasts **7** turns.

The American player must pick up as many of the Bonus tactics as possible, and take at least one heavy vehicle off the terrain through one of the spaces of board **2-B** that are marked with an arrow. The vehicle must completely exit the board.
The further out his vehicle gets, the greater his victory will be.

In order to pick up a marker, the player just moves onto it with a heavy vehicle (no need to stop). Once picked up, the player sets it aside.

During Turn **2**'s Supply phase, the German player deploys his second combat group in **Zone 2**.

group 2
Oberst Hauser, Recon group (X1), **Fire group** (X1), **MG42** (X1), **Pak 40** (X1), **Helmut and one position.**

During Turn **4**'s Supply phase, the German player deploys his third combat group in **Zone 3**.

group 3
MG42 (X1), **Fire group** (X1), **Panzerschreck** (X1) **and one position.**

At the start of each turn, the German player takes the Panzerfaust token. He can use it during the turn in progress, but he cannot keep it for the next turn. Once used, put the pawn back on the space for the next turn.

As soon as the American player gets a heavy vehicle off the board through one of the spaces marked with an arrow, the game ends.
The game also ends if all the American heavy vehicles are destroyed.

In order to determine the American player's score, you must multiply the number of checkpoints claimed but not used, by the factor indicated on the exit space (see plan).

American Minor Victory: From **1** to **4** points
American Simple Victory: From **5** to **9** points
American Major Victory: 10 points or more

If the American player hasn't gotten any heavy vehicles off the board by the end of Turn **7**, or all his heavy vehicles are destroyed, this is a German Total Victory.

Out of Gas

Terrain tiles
C1-B, C2-B, C3-A, C4-B, C5-A, C6-A

Surrounded, with these blasted halftracks out of gas... The airforce has promised to help us, but for the moment, we can't rely on them.
The only way out is to fill their tanks and shoot our way out of here!

Composition of the Armies

Battlefield and Deployment

Each player deploys his units in his deployment zone. Both American halftracks are parked, and cannot budge; however, they can shoot!

Place the Gas marker in the small house.

Without looking, randomly select 3 Bonus tactics markers, and place them on the battlefield.

Remove the **Artillery** and **Airstrike** cards from both decks, and the Precision card from the German deck.

Shuffle the American **Airstrike** cards and form a pile (face-down) beside the turn counter.

The German player has initiative, and therefore deploys first.

Each player draws **4** cards.

Victory Conditions and Particular Information:

The American player must seek gas cans so he can start his halftracks. In order to pick up the Gas marker, he must enter the house and end his movement. Then, the unit can move with the gas cans, and carry them to a space adjacent to the halftracks. If the unit is destroyed, the marker remains on that space. The German player can neither pick up the gas cans, nor destroy the halftracks until they are fueled.

At the start of the turn, the American player draws an **Airstrike** card in addition to any other cards.

The game ends when the American player moves his last halftrack off through one side or the other of the road (spaces with arrows), or at the end of turn **8**.

Once the German player blocks one or two exit spaces (red triangle) with vehicles, the American player is now allowed to exit the board with his halftracks by any space.

If the American player gets only one halftrack out, this is a **Minor Victory**.
If the American player gets both halftracks out, this is a **Major Victory**.
Any other case is a German **Major Victory**.

War, It's a Mess!

Terrain tiles
C1-B, C2-B, C3-A, C4-B, C5-B, C6-B

France, Normandy, August 1944. The Allied forces are engaged in fisticuffs with the German army, and paying for each meter gained with dozens of deaths. In the hell of the Norman hedgerows, it's difficult to know where your friends are, and from where the enemy is coming. Units getting mixed together, divisions exploding... It's a mess!

Composition of the Armies

Battlefield and Deployment

Each player deploys his units in his deployment zone.

Without looking, randomly select **5** Bonus tactics markers, and place them on the battlefield.
Under each marker, place **2** square recruitment options without looking at them, one American and one German, randomly drawn from all those available to you, regardless of colored bands.

Under each of the two army objectives, place 1 square recruitment option of the corresponding army, without looking at them.

Remove the cards Surprise, Precision, Booby Trap (German), and the **Artillery** and **Airstrike** cards from both decks.

Determine initiative, and place the corresponding marker on space 1 of the turn counter.
Each player draws **4** cards.

Victory Conditions and Particular Information:

The game lasts **8** turns.
In order to pick up or control a bonus tactic or an army objective, you must have, at the end of the Supply phase, an infantry unit in one of the **4** adjacent spaces or in the terrain overlay. For an army objective, it must also be the army whose symbol is printed on the marker.
If your enemy is also present, then the objective remains neutral, and you don't pick up the bonus.
Each time an infantry unit takes control of a bonus tactic or of an objective, in addition to the benefiting from the bonus indicated on it, the player gains the reinforcements brought by the recruitment tile that is found under the marker.
Discard your enemy's tile.
These reinforcements will be positioned in the player's deployment zone at the start of the Order phase of the next turn.

The player who has scored the most victory points (see rulebook, page **4**, Victory Conditions) wins the game.

The Best Defense Is a Good Offense!

Terrain tiles
C1-B, C2-A, C3-A, C4-B, C5-A, C6-A

The offensive is now!
After searching for weeks, the High Command of both sides seem to have identified a breakthrough line for their troops.
Will the Allies push the Germans all the way to Paris? Will the Germans push the Allies back to the sea?

Composition of the Armies

Each player has 500 Points to compose his army.
At the start of the game, each side must divide his army into two parties with equal points (plus or minus 50 points).

One of these halves will form the spearhead of the offensive for each player, and the other will provide reinforcements to exploit the breakthrough, or to attempt to plug the holes...

Battlefield and Deployment

Each player deploys the first half of his army in his deployment zone. The other half is set aside.

Without looking, randomly select 4 Bonus tactics markers, and place them on the battlefield.

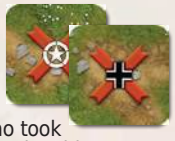

Remove the Precision cards and the **Artillery** and **Airstrike** cards from both decks (unless you have taken an order).

Determine initiative and place the corresponding marker on Turn **1**.
Place the End marker on Turn **6**.
Each player draws **4** cards.

Victory Conditions and Particular Information:

A complete breakthrough is played in **2** rounds of **6** turns each.
- If, at the end of the Supply phase, a player controls his army's objective marker, placed on enemy territory, the latter player must retreat.
- The game boards situated on the side of the player who took the advantage are removed and repositioned on the opposite side.
- The player who retreated chooses the orientation of these relocated boards.
- If the player who retreated still had troops on these boards that are now in enemy territory, they are captured (or massacred) and thus considered eliminated. Those of his opponent are added to his reinforcements.
- The objective in the color of the army of the winner of this first round is then placed on the new board in the same manner as at the start of the first round, and henceforth represents the second and final line of defense of the routed player. The other objective is removed from the game.
- The rest of each player's units, those which were not on the two boards that were moved, stay where they are.
- The turn marker is reset to space 1 of the turn counter, showing the player who made the breakthrough during the first round, and who gained initiative.
- The End marker is placed on Turn 6.
- The second round can commence.

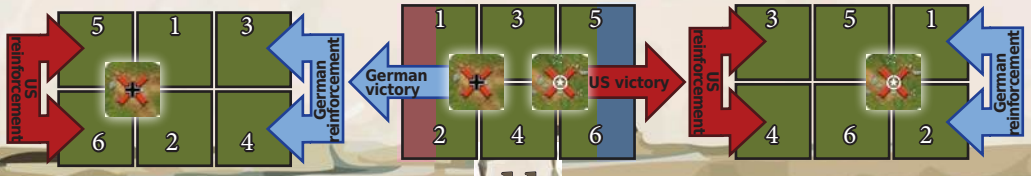

Reinforcements

Each player's reinforcements are the second half of their army, kept in reserve until now. The players can give them orders or wait until the next Supply phase to have them enter the game by the board situated on their respective sides (marked by the arrows in the diagram below).

If, at the end of the first round, neither of the players could control his objective, the game ends as a **draw**.

Minor Victory: The player won the first round, but failed to seize control of the second objective during the second round.
Total Victory: The player succeeded in seizing control of the second objective before the end of the sixth turn of the second round.

Tempest of Fire

The remaining elements of the Panzer Lehr have been cornered in a hamlet. The battle has raged for several days now, and German resistance is fierce. The Germans still have one last hope to break the encirclement; contact the artillery in order to disperse the American army. But the radio is useless, and it will take ingenuity in salvaging parts from the wrecks of tanks littering the battlefield.

Composition of the Armies

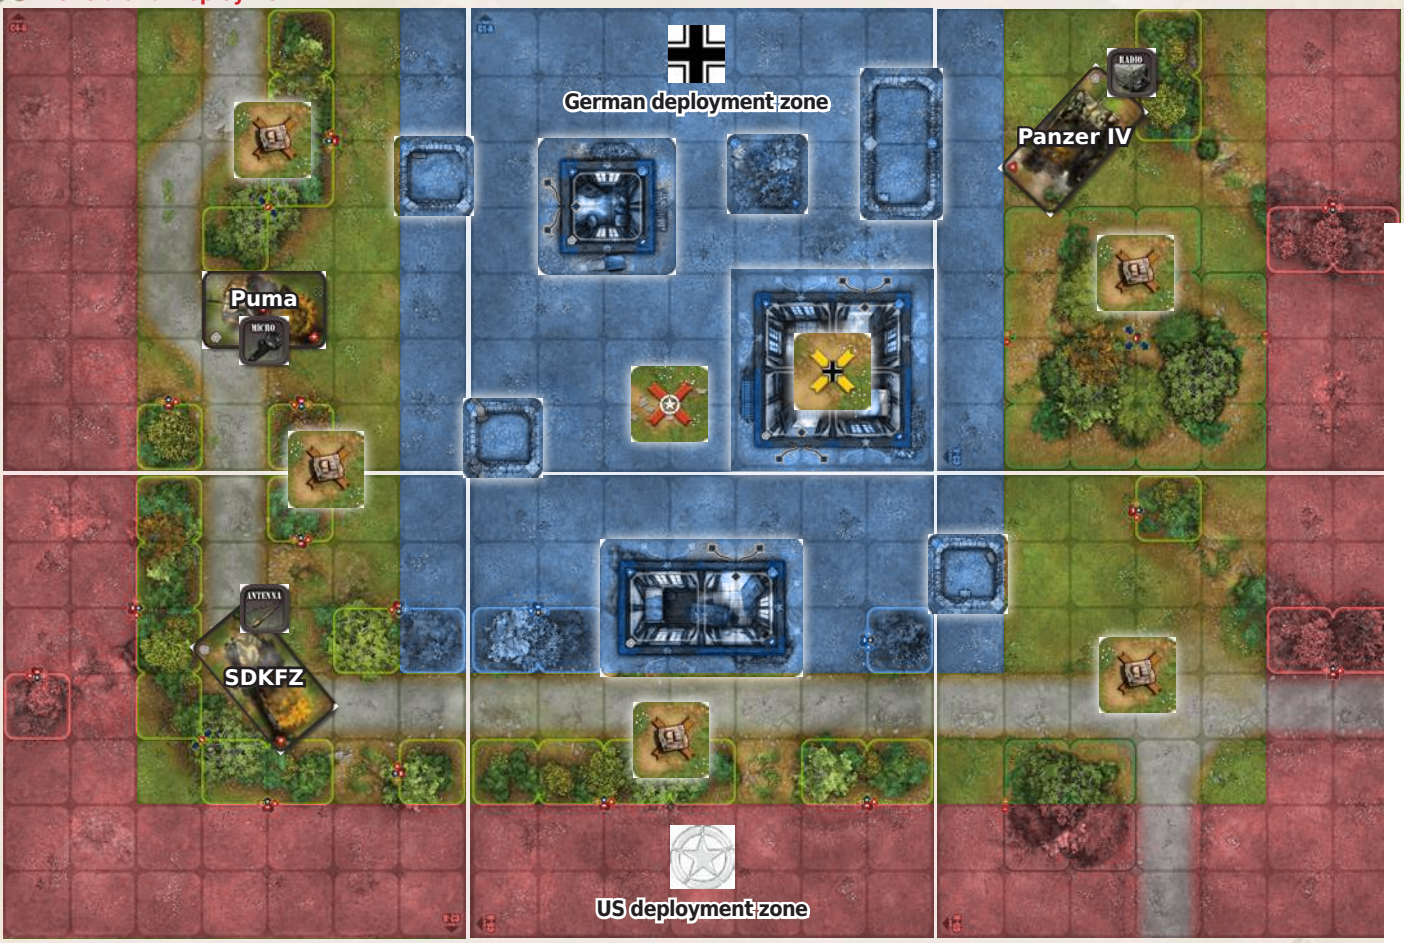

Reinforcements

Terrain tiles
C1-A, C2-B, C3-A, C4-B, C5-B, C6-B

Battlefield and Deployment

The game lasts **8 turns**.

Each player deploys his units in his deployment zone.
Set the American reinforcements aside. Until these reinforcements come into play, the American player does not count their stars when establishing the number of Order tokens to which he is entitled.

Without looking, randomly select **5** Bonus tactics markers and place them on the battlefield.

Place the wrecks of vehicles, the three parts of the radio, the American primary objective, and the German secondary objective as indicated in the plan.

Remove the **Artillery** and **Airstrike** cards from both decks, and the Precision card from the American deck.

Take the German **Artillery** cards, shuffle them, and form a face-down pile beside the turn counter.

The American player has the initiative; place the corresponding marker on Turn 1.

Each player draws **4** cards.

Victory Conditions and Particular Information:

The German player must seek out all the parts to build the radio. In order to pick up these parts, he must enter one of the adjacent spaces and end his movement. Then, the unit can move with it. If the unit is destroyed, the marker remains on the space.
The American player cannot pick up these parts.

The German player must try to bring the three parts to the house in which the German objective marker is located.
If the house is destroyed, reposition the German objective in the ruins.

Once the three parts are united, the German player can draw, at the start of each turn, one artillery card in addition to any other cards.

The American reinforcements are placed in the US deployment zone in Turn 4 during the Reserve phase.

If, at the end of any Supply phase, the American player is the only one to have a unit in one of the **4** spaces adjacent to the US objective marker, the game ends immediately, and the American player is declared the winner.
If, at the end of Turn **8**, the American player has not seized control of his objective, the German player is declared victorious.

PLAYER GENERATED CLASHES V1.1

For the following scenarios, you will have to work a bit ... You will have to build your army and create the battlefield. The following tools will help you to create new clashes.

Player generated Clashes last 8 turns. but can be won before the end of the eigth turn.

Setting the game

First of all, you must define the size of your armies by choosing a number of army points (per army). The higher the number, the longer the game is likely to last.

This number of army points will also define the elements you will need to place, as well as the victory conditions. These values are for guidelines only, and you can alter them if you wish.

Size of the Battlefield: The number of gameboards and terrain overlays that make up the terrain. This is up to your whims. It is up to the players to decide which game boards and terrain overlays to use, but any cover should be distributed evenly between the two sides.

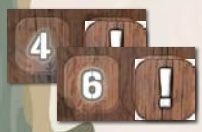

If you do not utilize the **modifiers** (see below), the deployment zones are the two edges of the battlefield, and are two spaces deep.

Number and value of the primary and secondary objectives: Their value changes according to the size of the battle. Place them at an equal distance from both camps, so that neither player has an advantage.
Place the primary objectives on their dark side.
For the secondary objectives, choose whether you want them to be neutral or assigned to an army.

Number of bonus tactics: Randomly choose the number indicated from among the available type of bonus tactics. Try not to look at any of them when you place them or set them aside.

Number of victory points for Turn 4/6: The number of victory points necessary to win the battle by Turn **4** or by Turn **6**.
If both players have exceeded this number, the player with the greater score wins the game.

If this condition is not met, the game continues.

You can also decide to ignore this point, and let your battles run until the end of the eighth turn.

These victory points are won by controlling the primary or secondary objectives (see Scenario Counters and Markers at the start of this booklet) and by inflicting damage on your enemy.

Each time one of your units is eliminated, places its counter underneath the Option or the Recruitment Tile to which it belongs.

If the unit belongs to an Option AND a Recruitment Tile, attribute it to the Option.

Next verify whether the Option or the Recruitment Tile is "broken". That is to say if it has reached is breaking point (indicated by the little red squares).
If this is the case, turn over the element (the Recruitment Option token or the Recruitment Tile).
If it was a Recruitment Tile, the Options linked to it are not turned over unless they, too, have reached their own breaking points.

On the back, are printed the number of victory points gained by your opponent.

Average duration: How long your game will last.
This information is only to give you a sense, and is calculated in a totally approximate fashion, so take it with a grain of salt...

Once all these elements are defined, build your armies. Select the cards for your decks (minimum 40).

Place the turn counter with the "event" markers on Turns **4** and **6**, so you don't forget to check the victory conditions, and the **END** marker on the turn 8.

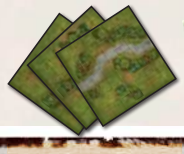

Determine initiative, and place the corresponding marker on space **1** of the turn counter.

Draw **4** cards and commence the hostilities!

If neither player has won the game by the end of Turn **4** nor Turn **6**, the player with the most victory points at the end of Turn **8** wins the game.

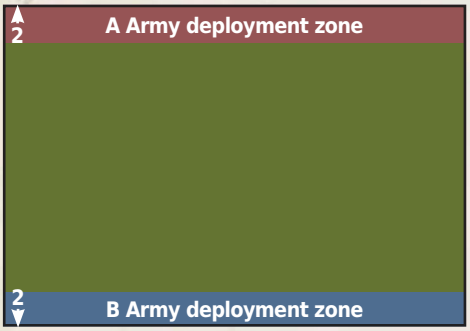

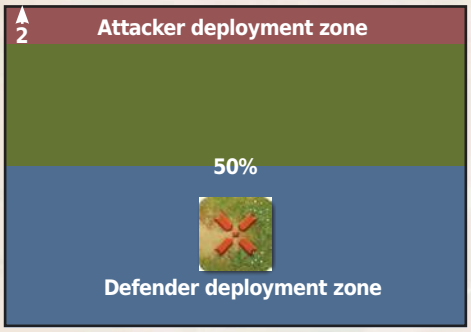

150 - 250	2 - 3 tiles 1 - 2 terrain overlay	1 neutral 10 points	2 5 points	2 - 3	25	30	45min
250 - 350	3- 4 tiles 2 - 3 terrain overlay	1 neutral 15 points	3 5 points	3 - 4	35	40	1H
350 - 450	4 - 6 tiles 3 - 4 terrain overlay	1 US 1 German 20 points	4 5 points	4 - 5	40	45	2H
500+	6 tiles 4 - 6 terrain overlay	1 US 1 German 1 neutral 15 points	6 5 points	5 - 6	50	60	3H

Deployment

Modifiers

Attack/Defense
One of the armies is defending, and the other is attacking.
There is only one objective in the color of the attacker, which you place in the deployment zone of the defender.

Deployment example

The game ends when the attacker seizes control of the objective (attacker wins), or at the end of the 8th turn (defender wins).

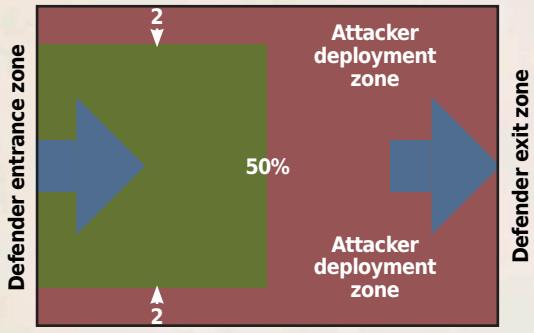

For an easy game for the defender:
The defender gets **75%** of the army points, but he takes the number of terrain overlays indicated in the "**Size of the battlefield**" column, and places them in his deployment zone.

For a difficult game for the defender:
The defender gets **50%** of the army points, but he takes the number of terrain overlays indicated in the "**Size of the battlefield**" column, and places them in his deployment zone.

Ambush
One of the armies is defending, and the other is attacking.

The game ends when the defender gets his last unit off the board through the side indicated by the blue arrow, or at the end of the 8th turn.

Deployment example

For an easy game for the defender:
The attacker gets **50%** of the army points, but he takes the number of terrain overlays indicated in the "**Size of the battlefield**" column, and places them in his deployment zone. He is not allowed to block the defender's escape with the terrain overlays.

For a difficult game for the defender:
The attacker gets **75%** of the army points, but he takes the number of terrain overlays indicated in the "**Size of the battlefield**" column, and places them in his deployment zone. He is not allowed to block the defender's escape with the terrain overlays.

Major victory for the defender: The defender escapes with more than **50%** of his troops.
Minor victory for the defender: The defender escapes with more than **25%** of his troops.

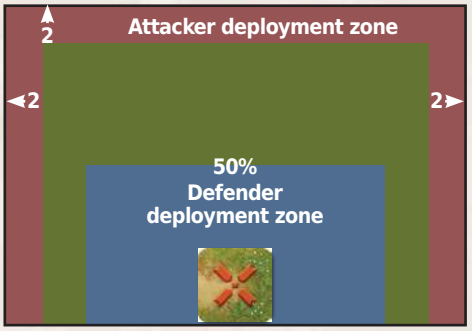

Major victory for the attacker: The defender does not escape with any of his troops by the end of the **8**th turn.
Minor victory for the attacker: The defender escapes with fewer than 2**5%** of his troops.

Destruction
One of the armies is defending, and the other is attacking.
There is only one objective in the color of hte attacker, which you place in the defender's deployment zone, inside a decorative element. This element does not count against the total indicated by the "**Size of the battlefield**" column.

The game ends when the attacker has destroyed the objective (attacker wins), or at the end of the **8**th turn (defender wins). In order to destroy the objective, place the "**Dynamite**" and "**Detonator**" markers on it with an infantry unit who must carry them into the decorative element.
You cannot place them both during the same turn!

Deployment example

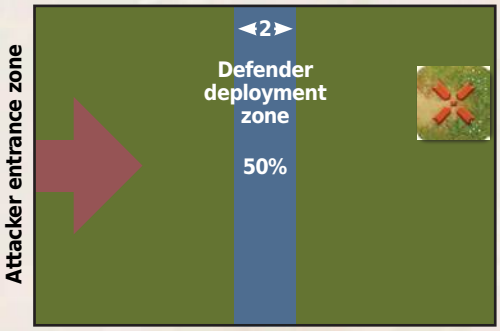

For an easy game for the defender:
The defender gets **75%** of the army points, but he takes the number of terrain overlays indicated in the "**Size of the battlefield**" column, and places them in his deployment zone.

For a difficult game for the defender:
The defender gets **50%** of the army points, but he takes the number of terrain overlays indicated in the "**Size of the battlefield**" column, and places them in his deployment zone.

Breakthrough
There is only one objective in the color of the attacker, which you place opposite of where he enters the battlefield, as far away as possible.

The game ends when the attacker seizes control of the objective (attacker wins), or at the end of the **8**th turn (defender wins).
For an easy game for the defender:
The defender gets **75%** of the army points, but he takes the number of terrain overlays indicated in the "**Size of the battlefield**" column, and places them in his deployment zone.

Deployment example

For a difficult game for the defender:
The defender gets **50%** of the army points, but he takes the number of terrain overlays indicated in the "**Size of the battlefield**" column, and places them in his deployment zone.
